

## Contents

<i>Preface</i>	<i>page ix</i>
<b>Part I Foundations</b>	<b>1</b>
1 Introduction	3
1.1 What is a signal?	3
1.2 Domain and range of a signal	3
1.3 Converting signals from one form to another	4
1.4 Processing signals	5
1.5 Notation	6
2 Sampling	10
2.1 Regular sampling	10
2.2 What is lost in sampling?	11
2.3 Examples of aliasing	13
2.4 Negative frequencies	15
2.5 The Nyquist limit	16
2.6 Irregular sampling	17
3 Conversion between analogue and digital	25
3.1 A simple digital signal processing system	25
3.2 Non-linear quantisation	28
3.3 How many bits do we need?	29
3.4 Dither	30
3.5 Non-ideal conversion	32
4 The frequency domain	37
4.1 Measuring rotational speed	37
4.2 More complicated motion	39
4.3 Interpreting the Fourier transform	42

vi	<i>Contents</i>	
4.4	How many Fourier coefficients are there?	43
4.5	Reconstructing a signal from its Fourier transform	43
4.6	Real signals	44
4.7	Dealing with non-periodic signals	49
4.8	The fast Fourier transform	53
5	Filters	63
5.1	Smoothing a signal	63
5.2	Analysing a filter	66
5.3	Convolution in the frequency domain	74
5.4	Correlation	76
5.5	Designing FIR filters	77
5.6	Interpolation	83
5.7	Infinite impulse response filters	94
5.8	Filtering complex sequences	100
6	Likelihood methods	104
6.1	Probability and conditional probability	104
6.2	Probability and signal processing	109
6.3	Noise	111
7	Numerical considerations	124
7.1	Fixed-point representations	124
7.2	Negative numbers in fixed-point representations	135
7.3	Floating-point representations	139
7.4	Choosing between fixed point and floating point	143
	<b>Part II Applications</b>	147
8	Audio	149
8.1	The ear	149
8.2	Sample rates and conversion	149
8.3	Audio in the frequency domain	152
8.4	Compression of audio signals	154
8.5	Pitch extraction	163
8.6	Delta–sigma conversion	172
9	Still images	178
9.1	Luminance and chrominance	178
9.2	Gamma	179
9.3	An image as a signal	180
9.4	Filtering an image	185
9.5	The discrete cosine transform	193

<i>Contents</i>		vii
9.6	JPEG compression for continuous-tone images	198
9.7	The discrete wavelet transform	202
9.8	Image scaling	209
9.9	Image enhancement	213
9.10	Edge detection	215
9.11	Processing of bilevel images	217
9.12	Pattern recognition	223
10	Moving images	231
10.1	Standard video formats	231
10.2	Deinterlacing	234
10.3	Standards conversion	239
10.4	Motion estimation	241
10.5	MPEG-2 video compression	246
11	Communications	253
11.1	Amplitude modulation	254
11.2	Frequency modulation	260
11.3	Quadrature amplitude modulation	263
11.4	Spread spectrum schemes	287
12	Implementations	299
12.1	Software implementations	300
12.2	Processor architectures	302
12.3	Hardware implementations	307
12.4	Bit-serial arithmetic	313
	<i>Answers</i>	323
	<i>Index</i>	329
