<i>Preface</i>	<i>page ix</i>
<b>Introduction to invariant and equivariant problems</b>	<b>1</b>
The curve completion problem	1
Curvature flows and the Korteweg–de Vries equation	4
The essential simplicity of the main idea	5
Overview of this book	9
How to read this book . . .	11
<b>1 Actions galore</b>	<b>12</b>
1.1 Introductory examples	12
1.2 Actions	18
1.2.1 Semi-direct products	23
1.3 New actions from old	24
1.3.1 Induced actions on functions	24
1.3.2 Induced actions on products	25
1.3.3 Induced actions on curves	26
1.3.4 Induced action on derivatives: the prolonged action	27
1.3.5 Some typical group actions in geometry and algebra	31
1.4 Properties of actions	33
1.5 One parameter Lie groups	37
1.6 The infinitesimal vector fields	39
1.6.1 The prolongation formula	44
1.6.2 From infinitesimals to actions	46
<b>2 Calculus on Lie groups</b>	<b>51</b>
2.1 Local coordinates	51
2.2 Tangent vectors on Lie groups	55

vi	<i>Contents</i>	
	2.2.1 Tangent vectors for matrix Lie groups	58
	2.2.2 Some standard notations for vectors and tangent maps in coordinates	60
2.3	Vector fields and integral curves	62
	2.3.1 Integral curves in terms of the exponential of a vector field	66
2.4	Tangent vectors at the identity versus one parameter subgroups	67
2.5	The exponential map	68
2.6	Associated concepts for transformation groups	69
<b>3</b>	<b>From Lie group to Lie algebra</b>	<b>73</b>
3.1	The Lie bracket of two vector fields on $\mathbb{R}^n$	74
	3.1.1 Frobenius' Theorem	82
3.2	The Lie algebra bracket on $T_e G$	87
	3.2.1 The Lie algebra bracket for matrix Lie groups	90
	3.2.2 The Lie algebra bracket for transformation groups, and Lie's Three Theorems	95
3.3	The Adjoint and adjoint actions for transformation groups	105
<b>4</b>	<b>Moving frames</b>	<b>114</b>
4.1	Moving frames	114
4.2	Transversality and the converse to Theorem 4.1.3	122
4.3	Frames for $SL(2)$ actions	126
4.4	Invariants	127
4.5	Invariant differentiation	132
	4.5.1 Invariant differentiation for linear actions of matrix Lie groups	139
4.6	*Recursive construction of frames	140
4.7	*Joint invariants	148
<b>5</b>	<b>On syzygies and curvature matrices</b>	<b>151</b>
5.1	Computations with differential invariants	152
	5.1.1 Syzygies	159
5.2	Curvature matrices	161
5.3	Notes for symbolic computation	167
5.4	*The Serret–Frenet frame	168
5.5	*Curvature matrices for linear actions	175
5.6	*Curvature flows	180
<b>6</b>	<b>Invariant ordinary differential equations</b>	<b>185</b>
6.1	The symmetry group of an ordinary differential equation	187

*Contents*

vii

6.2	Solving invariant ordinary differential equations using moving frames	189
6.3	First order ordinary differential equations	192
6.4	$SL(2)$ invariant ordinary differential equations	195
6.4.1	Schwarz' Theorem	195
6.4.2	The Chazy equation	197
6.5	Equations with solvable symmetry groups	199
6.6	Notes on symbolic and numeric computation	202
6.7	Using only the infinitesimal vector fields	202
<b>7</b>	<b>Variational problems with symmetry</b>	<b>206</b>
7.1	Introduction to the Calculus of Variations	206
7.1.1	Results and non-results for Lagrangians involving curvature	212
7.2	Group actions on Lagrangians and Noether's First Theorem	216
7.2.1	Moving frames and Noether's Theorem, the appetizer	220
7.3	Calculating invariantised Euler–Lagrange equations directly	222
7.3.1	The case of invariant, unconstrained independent variables	224
7.3.2	The case of non-invariant independent variables	227
7.3.3	The case of constrained independent variables such as arc length	230
7.3.4	The 'mumbo jumbo'-free rigid body	232
7.4	Moving frames and Noether's Theorem, the main course	236
