<i>Symbols and notations</i>	xvi
Introduction	1
What is scattering?	1
An overview of the field of neutron scattering	2
Matters of general significance	6
1 About neutrons	10
1.1 The neutron as an elementary particle	10
1.2 Neutron interactions	12
1.3 Neutrons as waves	16
1.4 Neutrons as particles	20
1.5 The neutron transport equation	22
1.6 The diffusion equation	24
1.7 Transport theory results	26
1.8 Thermal neutron diffusion theory results	28
1.9 Slowing-down theory: neutrons slowing down in a medium	31
1.10 Time-dependent slowing-down	37
1.11 The Maxwellian thermal-neutron energy distribution	43
1.12 The angular distribution at the surface of a moderator – the Fermi approximation	46
1.13 Summary	47
Further reading	48
2 Neutron production, moderation, and characterization of sources	49
2.1 Primary neutron sources	50
2.2 Moderators and moderation of fast neutrons	71

viii	<i>Contents</i>	
2.3	Characterization of sources	77
2.4	Conclusion	86
	Further reading	86
3	Scattering theory: nuclear	87
3.1	Scattering of slow neutrons from a single spinless nucleus	87
3.2	The Fermi pseudopotential	95
3.3	Scattering by simple objects: form factors	96
3.4	Scattering cross sections and scattering length density	101
3.5	Double differential scattering cross section and the Fermi golden rule	103
3.6	Coherent and incoherent scattering	107
3.7	Scattering functions and correlation functions	116
3.8	Dynamical susceptibility and linear response theory	118
3.9	Elastic scattering cross sections, total scattering, and static approximation	124
3.10	Total scattering and multiple scattering	128
3.11	Examples of correlation functions and the Gaussian approximation	131
3.12	Concluding remarks	137
	Further reading	138
4	Scattering theory: magnetic	139
4.1	The magnetic moment of the neutron	139
4.2	Magnetic scattering of neutrons from electrons	143
4.3	The scattering function, the dynamic correlation function, and the generalized magnetic susceptibility	148
4.4	Magnetic scattering from atomic electrons in crystalline solids	149
4.5	Polarized neutrons	151
4.6	Neutron spin-dependent nuclear scattering: coherent and spin-incoherent scattering	153
4.7	Magnetic scattering from identical paramagnetic spins	155
4.8	Separation of nuclear coherent, spin-incoherent, and magnetic scattering from a paramagnetic powder	156
4.9	Polarization analysis of field-induced magnetic form factors	158
4.10	Examples	160
4.11	Concluding remarks	164
	Further reading	164
5	Neutron-scattering instruments: diffractometers and reflectometers	165
5.1	Introduction and early neutron diffraction	165

<i>Contents</i>		ix
5.2	Powder diffractometers	169
5.3	Single-crystal diffractometers	173
5.4	Small-angle diffractometers	179
5.5	Neutron reflectometers	197
	Further reading	202
6	Neutron-scattering instruments: spectrometers	204
6.1	Chopper spectrometers	206
6.2	Inverse geometry spectrometers	214
6.3	Triple-axis spectrometers	225
6.4	Spin-echo spectrometers	232
7	Devices	237
7.1	Collimators	237
7.2	Mirrors and neutron guides	247
7.3	Lenses	259
7.4	Rotating devices	262
7.5	Crystal monochromators	276
7.6	Reference scatterers	279
7.7	Polarizing filters and spin-manipulation devices	279
7.8	Conclusions	279
8	Detectors	281
8.1	Conversion reactions for slow-neutron detectors	281
8.2	Gas detectors	286
8.3	Scintillation detectors	298
8.4	Semiconductor detectors	306
8.5	Integrating detectors	307
8.6	Microchannel neutron detectors	310
8.7	Resonance capture gamma-ray neutron detectors	312
8.8	Detector development needs	313
9	Nuclear scattering: crystal structures	315
9.1	Coherent elastic scattering from a perfect crystal: the Laue condition, Bragg's law, and the Ewald sphere	316
9.2	The crystallographic unit-cell structure factor and the phase problem	319
9.3	The total elastic coherent scattering cross-section of a single crystal and a powder: the time-of-flight Laue method	320
9.4	Diffraction methods using monochromatic incident neutrons	322
9.5	Kinematical approximation and other wavelength- and geometry-dependent factors	323

x	<i>Contents</i>	
	9.6 Implications of crystallographic symmetry	324
	9.7 The Patterson function and Patterson symmetry	325
	9.8 Data collection and crystal structure refinement	326
	9.9 Crystal structure refinement	330
	9.10 An example of structural refinement	333
	9.11 Neutron protein crystallography	336
	9.12 Surface crystallography	339
	9.13 Concluding remarks	344
10	Nuclear scattering: lattice dynamics	346
	10.1 Theoretical framework	347
	10.2 Phenomenological models, microscopic theories, and molecular-dynamics simulations	352
	10.3 Group-theoretical analysis of the phonon dispersion relation	353
	10.4 Neutron measurements of phonon dispersion curves and density of states	354
	10.5 Phonon-related physics and thermodynamic properties	361
	10.6 Examples	365
	10.7 Studies of phonons in disordered and amorphous solids	367
	10.8 Concluding remarks	368
	Further reading	369
11	Nuclear scattering: chemical spectroscopy	370
	11.1 A simple classical liquid: a qualitative discussion of the neutron scattering functions	371
	11.2 Single-particle motion in a liquid: microscopic dynamics at short time	375
	11.3 Single-particle motion in a liquid: diffusion dynamics at long time	378
	11.4 The generalized frequency distribution function	380
	11.5 Coherent quasielastic scattering and de Gennes narrowing	381
	11.6 Fast sound measurements by neutron Brillouin scattering and momentum distribution by deep inelastic scattering	382
	11.7 Hydrogen motion in crystalline lattices	384
	11.8 Rotational spectroscopy in molecular solids	391
	11.9 The elastic incoherent structure factor	393
	11.10 Inelastic scattering from molecular rotation: librational-torsional oscillations and tunneling	393
	11.11 Concluding remarks	399

<i>Contents</i>		xi
12	Magnetic scattering: structures	401
12.1	Magnetic diffraction using unpolarized neutrons	402
12.2	The magnetic moment basis vector and propagation vectors	405
12.3	Single- \vec{k} , multi- \vec{k} , higher harmonics of \vec{k} , and domain structures	410
12.4	Scattering cross sections of magnetic diffraction from single-crystal and powder samples	410
12.5	Data collection: some practical considerations	413
12.6	Solving magnetic structures	414
12.7	Classification of magnetic structures according to magnetic space groups	422
12.8	Study of magnetic structures using polarized neutrons	422
12.9	Beyond spin-ordered structures and concluding remarks	428
13	Magnetic scattering: excitations	430
13.1	Excitations from low-lying states of a single ion: the crystal-field effect	432
13.2	Excitation spectra of spin pairs coupled by the Heisenberg exchange interaction	434
13.3	Single molecular magnets	437
13.4	Spin waves of Heisenberg magnets	441
13.5	Itinerant electron magnetism	446
13.6	Concluding remarks	450
	Further reading	450
14	Disordered and large structures	451
14.1	Basic distribution functions obtained from diffraction experiments	452
14.2	Experimental details and data correction	455
14.3	Data interpretation and structure models	459
14.4	Diffuse scattering from local disorder	461
14.5	The PDF method for analysis of local structures	465
14.6	Small-angle scattering from structures containing large particles	467
14.7	SANS from dilute systems	472
14.8	Characterization of individual particles	473
14.9	Interparticle interactions: the structure factors	477
14.10	Experimental setup and SANS data analysis	481
14.11	Practical examples of structural parameters obtainable from SANS experiments	482
14.12	Concluding remarks	484
