

## Index

- angular momentum transport, 112–113, 119–121, 199–200, 300–301
- chaotic oscillations, 38–42, 342–343
- convective overshoot and penetration, 13, 75, 93, 110–112
- convection zone
  - mean field models, 136–139
  - simulations, 113–118
- gravity waves, 16–19, 22, 103–104, 168
- gyroscopic pumping, 15, 184, 188–195, 215
- helioseismology
  - inversion techniques, 55–61
  - solar rotation, 67–71
  - solar structure, 61–67
- helium settling, 61–64, 77, 78, 206–208
- instabilities
  - hydrodynamic shear, 100, 248–249
  - magnetically driven, 186, 201, 248
  - magnetorotational, 250, 299–300, 301–305
  - magneto–shear, 247, 249–261, 268–270, 307–313
  - shallow water theory, 261–267
- lithium depletion, 20, 42, 54, 79, 102–103, 188, 206–208
- magnetic buoyancy
  - instability, 276–290
  - isolated flux tubes, 276, 290–293, 328–329
- magnetic confinement
  - fast tachocline, 23, 170–175, 271–272
  - slow tachocline, 19, 148–170, 195, 271–272
- mean field models
  - $\alpha$ -effect, 324–327
  - $\beta$ -effect (turbulent magnetic diffusion), 227–231, 327–328
  - $\Lambda$ -effect, 129–133
  - differential rotation, 139–143
  - heat transport, 133–135
  - magnetic flux pumping, 329–331
  - momentum transport, 231–235
- oceanic thermocline, 32, 42–44
- potential vorticity, 16, 185
- Rhines scale, magnetohydrodynamic, 217, 220, 222–227
- solar cycle, 38–42, 319–323
- solar differential rotation
  - from helioseismology, 9–10, 67–71
  - uniformly rotating radiative zone, 19, 68, 136, 149, 153, 184, 195–196
- solar dynamo
  - cyclic activity, 335–340
  - distributed model, 332
  - flux transport model, 332–333
  - grand minima, 340–344
  - interface model, 214, 333–334
  - small scale, 186, 196
- spin-down, 8, 32–38, 195–197
- spin-up, 43–44
- stellar magnetic activity, 322–323, 346
- Sun
  - properties at tachocline, 6–7, 148
  - structure, 4–7, 61–67
  - timescales, 5–6
- tachocline
  - asphericity, 11, 70–72
  - instabilities, 25, 244–248, 270–273, 294–296, 299–300
  - location and thickness, 4, 10, 20–21, 69–72, 74–79, 95–98, 110, 358–360
  - meridional circulation, 15, 184–187, 327
  - overall structure, 91–93, 344–346, 354–358
  - temporal variation, 12, 73–74
- tachocline models
  - Gough-McIntyre, 20–21, 152–166, 185, 217, 235–236
  - Spiegel-Zahn, 12–16, 42–43, 98–100, 217, 235–236
- torsional oscillations, 11, 71–73, 339–340
- turbulence
  - $\beta$ -plane, 218–237
  - MHD, 123–125, 305–306
  - shear, 118–122
  - two-dimensional, 98–102
- Zeldovich theorem, 220–222
