Preface to the fourth edition	xiii
 I THINKING IN GENERAL	 1
1 What is thinking?	5
Types of thinking	6
The search-inference framework	6
Thinking about beliefs	12
How do search processes work?	14
Knowledge, thinking, and understanding	17
Naive theories	17
Understanding	22
Conclusion	29
 2 The study of thinking	 31
Descriptive, normative, and prescriptive	31
Methods for empirical research	34
Observation	34
Computer models and artificial intelligence	46
General issues	47
Development of normative models	50
Descriptive models and heuristics	53
Development of prescriptive models	54
Classification of biases	54
Conclusion	58
 3 Rationality	 61
Good thinking and goal achievement	61
Optimal search	62
The meaning of rationality	63
Rationality and luck	64

vi	CONTENTS
Objections to rationality	65
Rationality and emotion	67
Rationality and belief	70
Rational belief formation	70
Self-deception	71
Beliefs as a cause of desires	73
Are people ever really irrational?	74
Conclusion	74
4 Logic	77
What is logic?	77
Types of logic	80
Difficulties in logical reasoning	82
Mental models	84
Logical errors in hypothesis testing	88
The four-card problem	88
The error as poor thinking	89
Resistance to instruction	90
Dual processes and rationalization	91
Content effects	92
Extensions of logic	93
Conclusion	97
II PROBABILITY AND BELIEF	99
5 Normative theory of probability	103
What is probability?	106
The frequency theory	107
The logical theory	108
The personal theory	109
Constructing probability judgments	112
Probability as willingness to bet	112
Comparison with a chance setup	113
Well-justified probability judgments	113
Coherence rules and expected utility	115
Evaluating probability judgments	118
Calibration	118
Scoring rules	119
Bayes's theorem	121
An example from medicine	121
Formulas for Bayes's theorem	123
Why frequencies matter	126
When Bayes's theorem is useful and when it isn't	129

<i>CONTENTS</i>	vii
Coincidences	130
The Monty Hall problem	131
Use of Bayes’s theorem in expert systems	132
Conclusion	134
6 Descriptive theory of probability judgment	137
Accuracy of probability judgments	137
Frequency judgments	137
Calibration and inappropriate extreme confidence	139
Improving calibration by conditional assessment	144
Heuristics and biases in probability	146
The representativeness heuristic	146
The availability heuristic	153
Subadditivity	156
Hindsight bias	157
Averaging	158
Conclusion	159
7 Hypothesis testing	161
Hypotheses in science	162
An example from medicine	162
Testing scientific hypotheses	165
The psychology of hypothesis testing	168
Concept formation	169
Congruence bias	171
Information bias and the value of information	177
Utility and alternative hypotheses	181
Conclusion	182
8 Judgment of correlation and contingency	183
Correlation, cause, and contingency	183
Accuracy of judgment	186
Attentional bias	186
Attentional bias in judging correlation	186
Attentional bias in judging contingency	189
Effect of goals on illusion of control	191
Effects of prior belief	192
Illusory correlation	193
Personality traits	193
Prior belief and attentional bias	195
Understanding theory and evidence	196
Conclusion	198

9 Actively open-minded thinking 199
Examples of actively open-minded thinking 200
Myside bias and irrational belief persistence 203
 The order principle, the primacy effect, and total discrediting 205
 The neutral-evidence principle 208
Effect of active open-mindedness on outcomes 211
Determinants and related phenomena 213
 Beliefs about thinking 213
 Distortion of beliefs by desires 215
 Related results 219
Factors that moderate belief persistence 221
 Elastic justification 221
 Value conflict 222
 Accountability 222
 Stress 223
 Groupthink 224
Conclusion 226

III DECISIONS AND PLANS 229

10 Normative theory of choice under uncertainty 233
Expected-utility theory 237
 Expected value 238
 Expected utility 238
 Other examples of comparison of errors 242
Why expected-utility theory is normative 243
 The long-run argument 243
 The argument from principles 245
 An alternative principle: Tradeoff consistency 249
The utility of money 250
Conclusion 255

11 Descriptive theory of choice under uncertainty 257
Experienced, predicted, and decision utility 258
Bias in decisions under uncertainty 259
 The Allais paradox 260
Prospect theory 262
 Probability: The pi function 263
 Utility: The Value function and framing effects 267
 Extending prospect theory to events without stated probabilities . . 271
Rank-dependent utility theories 272
Emotional effects of outcomes 275
 Regret and rejoicing 275

CONTENTS	ix
Disappointment and elation	277
The role of regret in decisions	278
Rationality of regret and disappointment in decision making	280
The ambiguity effect	281
Ambiguity and “unknown probability”	281
Rationality of the ambiguity effect	282
Aversion to missing information	284
Ambiguity and adjustment of probability	285
Uncertainty and reasons for choice	285
Conclusion	286
12 Choice under certainty	289
Prominence and noncompensatory strategies	289
Other reversals: Compatibility and evaluability	292
Response mode compatibility	292
Evaluability and joint versus separate evaluation	294
Effects of the options available on choice	295
Asymmetric dominance	295
Compromise	296
Mental accounting	296
The status quo (endowment) effect	297
Omission bias and default bias	299
Emotional effects of the reference point	300
Opportunity costs	301
Positive and negative attributes	301
Integration and segregation	303
The extra-cost effect	305
The sunk-cost effect	305
The reference price	307
Conclusion	308
13 Utility measurement	311
Decision analysis and related methods	311
The Oregon Health Plan	312
Decision analysis versus cost-benefit analysis	314
The measurement of utility	317
Utility measurement as prediction	317
Direct versus indirect judgments	318
Simple direct judgment and the analog scale	320
Difference measurement	321
Standard gambles	323
Time tradeoff and person tradeoff	327
What counts in health utility?	329
Adaptation and point of view	329

Other methods involving matching and comparison	331
Contingent valuation (CV)	334
Disagreement among measures	337
Conclusion	339
14 Decision analysis and values	341
Fundamental versus means values	342
Discovering values	343
Objectives of hiring a new faculty member in psychology	344
Conjoint measurement	346
MAUT as a type of decision analysis	349
Rules and tradeoffs	356
The value of human life	358
Teaching decision analysis	360
Conclusion	361
15 Quantitative judgment	363
Multiple linear regression	364
The lens model	365
The mechanism of judgment	372
Do people really follow linear models?	372
Impression formation	374
Averaging, adding, and number of cues	375
Representativeness in numerical prediction	377
Anchoring and underadjustment	380
Simple heuristics for judgment	380
Classification	383
Functional measurement and conjoint analysis	385
Conclusion	387
16 Moral judgment and choice	389
What are moral judgments?	390
Imperatives and the naturalistic fallacy	391
Relativism	392
Types of judgment	393
Morality versus convention	393
Social norms	395
Moral realism	396
Utilitarianism as a normative model	396
Moralistic goals	396
Frequently asked questions about utilitarianism	397
Interpersonal comparison	399
Utilitarianism and expected utility	401
Deontological rules	402

CONTENTS	xi
Rule utilitarianism	404
Biases in moral judgment?	406
Acts and omissions	407
Other possible biases	409
Can intuitions be values?	413
Conclusion	415
17 Fairness and justice	417
The study of fairness and justice	418
Equity theory: The desire for justice	419
Utilitarianism and fairness	421
Intuitions	425
Heuristics and self-interest	434
Negotiation	435
Conclusion	440
18 Social dilemmas: Cooperation versus defection	441
Laboratory versions	442
Prisoner's dilemma	443
Effects of repetition	444
N-person prisoner's dilemma	444
Normative and prescriptive theory of social dilemmas	446
Motives in social dilemmas	449
Altruism	450
Competition	452
Fairness, equality, and envy	452
Fear and greed	453
Trust	457
Voters' illusions	458
Solutions to social dilemmas	462
Experimental approaches	462
Social reform	467
Conclusion	468
19 Decisions about the future	471
The choice of personal goals	473
Good reasons for sticking to plans	475
Bad reasons for sticking to plans: Biases	476
Discounting	478
Economic theory of discounting	478
Normative theory of discounting	480
Descriptive data on discounting	482
The rationality of personal discounting	487
Self-control	488

xii	CONTENTS
Why we need self-control	489
Methods of self-control	489
Emotions and time	492
Adaptation, contrast, and heuristics	493
Morality and prudence	495
Conclusion	496
20 Risk	497
Normative theory	498
Public control of risk	499
Private insurance	501
Investment and entrepreneurs	501
Risk regulation and the intuitions that support it	502
The psychometric approach	503
Voluntary versus involuntary	504
Known versus unknown	505
Catastrophic versus individual	506
Benefit	507
Other biases in risk judgments	507
Neglect of probability	507
Proportions versus differences	509
Zero risk	511
Individual versus statistical	512
Natural versus artificial	512
Omission versus commission	514
Intuitive toxicology and naive theories	515
Intuitions about tort law	516
Insurance and protective behavior	516
Investors and entrepreneurs	519
Individual and sex differences	523
Conclusion	524
References	527
Author Index	567
Subject Index	577
