	<b>Introduction</b>	<i>page</i> 1
<b>1</b>	<b>Elementary transformations of the Euclidean plane and the Riemann sphere</b>	5
	1.1 The Euclidean metric	5
	1.2 Rigid motions	6
	1.2.1 Scaling maps	8
	1.3 Conformal mappings	9
	1.4 The Riemann sphere	11
	1.5 Möbius transformations and the cross ratio	13
	1.5.1 Classification of Möbius transformations	18
	1.6 Möbius groups	22
	1.7 Discreteness of Möbius groups	24
	1.8 The Euclidean density	26
	1.8.1 Other Euclidean type densities	31
<b>2</b>	<b>Hyperbolic metric in the unit disk</b>	32
	2.1 Definition of the hyperbolic metric in the unit disk	32
	2.1.1 Hyperbolic geodesics	33
	2.1.2 Hyperbolic triangles	39
	2.2 Properties of the hyperbolic metric in $\Delta$	41
	2.3 The upper half plane model	43
	2.4 The geometry of $PSL(2, \mathbb{R})$ and $\Gamma$	46
	2.4.1 Hyperbolic transformations	46
	2.4.2 Parabolic transformations	48
	2.4.3 Elliptic transformations	50
	2.4.4 Hyperbolic reflections	51

<b>3</b>	<b>Holomorphic functions</b>	53
	3.1 Basic theorems	53
	3.2 The Schwarz lemma	55
	3.3 Normal families	58
	3.4 The Riemann mapping theorem	59
	3.5 The Schwarz reflection principle	63
	3.6 Rational maps and Blaschke products	64
	3.7 Distortion theorems	66
<b>4</b>	<b>Topology and uniformization</b>	68
	4.1 Surfaces	68
	4.2 The fundamental group	70
	4.3 Covering spaces	74
	4.4 Construction of the universal covering space	78
	4.5 The universal covering group	80
	4.6 The uniformization theorem	81
<b>5</b>	<b>Discontinuous groups</b>	83
	5.1 Discontinuous subgroups of $\mathcal{M}$	83
	5.2 Discontinuous elementary groups	90
	5.3 Non-elementary groups	94
<b>6</b>	<b>Fuchsian groups</b>	96
	6.1 An historical note	96
	6.2 Fundamental domains	97
	6.3 Dirichlet domains and fundamental polygons	101
	6.4 Vertex cycles of fundamental polygons	110
	6.5 Poincaré's theorem	115
<b>7</b>	<b>The hyperbolic metric for arbitrary domains</b>	124
	7.1 Definition of the hyperbolic metric	124
	7.2 Properties of the hyperbolic metric for $X$	127
	7.3 The Schwarz–Pick lemma	130
	7.4 Examples	133
	7.5 Conformal density and curvature	139
	7.6 Conformal invariants	141
	7.6.1 Torus invariants	141
	7.6.2 Extremal length	143
	7.6.3 General Riemann surfaces	147
	7.7 The collar lemma	148

*Contents*

ix

<b>8</b>	<b>The Kobayashi metric</b>	153
	8.1 The classical Kobayashi density	153
	8.2 The Kobayashi density for arbitrary domains	154
	8.2.1 Generalized Kobayashi density: basic properties	155
	8.2.2 Examples	161
<b>9</b>	<b>The Carathéodory pseudo-metric</b>	163
	9.1 The classical Carathéodory density	163
	9.2 Generalized Carathéodory pseudo-metric	165
	9.2.1 Generalized Carathéodory density: basic properties	166
	9.2.2 Examples	170
<b>10</b>	<b>Inclusion mappings and contraction properties</b>	172
	10.1 Estimates of hyperbolic densities	172
	10.2 Strong contractions	173
	10.3 Lipschitz domains	175
	10.4 Generalized Lipschitz and Bloch domains	180
	10.4.1 Kobayashi Lipschitz domains	180
	10.4.2 Kobayashi Bloch domains	182
	10.4.3 Carathéodory Lipschitz domains	182
	10.4.4 Carathéodory Bloch domains	184
	10.5 Examples	184
<b>11</b>	<b>Applications I: forward random holomorphic iteration</b>	191
	11.1 Random holomorphic iteration	191
	11.2 Forward iteration	192
<b>12</b>	<b>Applications II: backward random iteration</b>	195
	12.1 Compact subdomains	195
	12.2 Non-compact subdomains: the $\kappa\kappa$ -condition	196
	12.3 The overall picture	198
<b>13</b>	<b>Applications III: limit functions</b>	201
	13.1 Uniqueness of limits	201
	13.1.1 The key lemma	201
	13.1.2 Proof of Theorem 13.1.1	203
	13.2 Non-Bloch domains and non-constant limits	207
	13.2.1 Preparatory lemmas	207
	13.2.2 A necessary condition for degeneracy	208

x	<i>Contents</i>	
	13.2.3 Proof of Theorem 13.2.2	215
	13.2.4 Equivalence of conditions	217
<b>14</b>	<b>Estimating hyperbolic densities</b>	219
	14.1 The smallest hyperbolic densities	219
	14.2 A formula for $\rho_{01}$	220
	14.3 A lower bound on $\rho_{01}$	223
	14.3.1 The first estimates	224
	14.3.2 Estimates of $\rho_{01}$ near the punctures	229
	14.3.3 The derivatives of $\rho_{01}$	230
	14.3.4 The existence of a lower bound on $\rho_{01}$	234
	14.4 Properties of the smallest hyperbolic density	236
	14.5 Comparing Poincaré densities	240
<b>15</b>	<b>Uniformly perfect domains</b>	245
	15.1 Simple examples	246
	15.2 Uniformly perfect domains and cross ratios	247
	15.3 Uniformly perfect domains and separating annuli	249
	15.4 Uniformly thick domains	253
<b>16</b>	<b>Appendix: a brief survey of elliptic functions</b>	258
	16.0.1 Basic properties of elliptic functions	258
	<i>Bibliography</i>	264
	<i>Index</i>	268
