	<i>Preface</i>	<i>page xi</i>
1	Introduction	1
	1.1 What is ‘multiple scattering’?	1
	1.2 Narrowing the scope: previous reviews and omissions	10
	1.3 Acoustic scattering by N obstacles	11
	1.4 Multiple scattering of electromagnetic waves	16
	1.5 Multiple scattering of elastic waves	19
	1.6 Multiple scattering of water waves	23
	1.7 Overview of the book	27
2	Addition theorems in two dimensions	29
	2.1 Introduction	29
	2.2 Cartesian coordinates	30
	2.3 Hobson’s theorem	31
	2.4 Wavefunctions	34
	2.5 Addition theorems	36
	2.6 The separation matrices \mathbf{S} and $\widehat{\mathbf{S}}$	40
	2.7 Use of rotation matrices	43
	2.8 Two-centre expansions	44
	2.9 Elliptical wavefunctions	46
	2.10 Vector cylindrical wavefunctions	53
	2.11 Multipoles for water waves	54
3	Addition theorems in three dimensions	62
	3.1 Introduction	62
	3.2 Spherical harmonics	62
	3.3 Legendre’s addition theorem	65
	3.4 Cartesian coordinates	66

3.5	Hobson's theorem	67
3.6	Wavefunctions and the operator \mathcal{Y}_n^m	69
3.7	First derivatives of spherical wavefunctions	73
3.8	Axisymmetric addition theorems	75
3.9	A useful lemma	81
3.10	Composition formula for the operator \mathcal{Y}_n^m	83
3.11	Addition theorem for $j_n Y_n^m$	87
3.12	Addition theorem for $h_n^{(1)} Y_n^m$	89
3.13	The separation matrices \mathbf{S} and $\widehat{\mathbf{S}}$	91
3.14	Two-centre expansions	95
3.15	Use of rotation matrices	98
3.16	Alternative expressions for $\mathbf{S}(b\hat{\mathbf{z}})$	99
3.17	Vector spherical wavefunctions	106
3.18	Multipoles for water waves	107
4	Methods based on separation of variables	122
4.1	Introduction	122
4.2	Separation of variables for one circular cylinder	122
4.3	Notation	125
4.4	Multipole method for two circular cylinders	126
4.5	Multipole method for N circular cylinders	128
4.6	Separation of variables for one sphere	132
4.7	Multipole method for two spheres	135
4.8	Multipole method for N spheres	138
4.9	Electromagnetic waves	140
4.10	Elastic waves	141
4.11	Water waves	143
4.12	Separation of variables in other coordinate systems	148
5	Integral equation methods, I: basic theory and applications	152
5.1	Introduction	152
5.2	Wave sources	153
5.3	Layer potentials	154
5.4	Explicit formulae in two dimensions	159
5.5	Explicit formulae in three dimensions	162
5.6	Green's theorem	164
5.7	Scattering and radiation problems	166
5.8	Integral equations: general remarks	168
5.9	Integral equations: indirect method	169
5.10	Integral equations: direct method	172
6	Integral equation methods, II: further results and applications	179
6.1	Introduction	179
6.2	Transmission problems	179

Contents

ix

6.3	Inhomogeneous obstacles	180
6.4	Electromagnetic waves	187
6.5	Elastic waves	196
6.6	Water waves	203
6.7	Cracks and other thin scatterers	206
6.8	Modified integral equations: general remarks	209
6.9	Modified fundamental solutions	209
6.10	Combination methods	217
6.11	Augmentation methods	219
6.12	Application of exact Green's functions	222
6.13	Twersky's method	229
6.14	Fast multipole methods	235
7	Null-field and T-matrix methods	242
7.1	Introduction	242
7.2	Radiation problems	242
7.3	Kupradze's method and related methods	243
7.4	Scattering problems	246
7.5	Null-field equations for radiation problems: one obstacle	247
7.6	Null-field equations for scattering problems: one obstacle	249
7.7	Infinite sets of functions	251
7.8	Solution of the null-field equations	257
7.9	The T -matrix for one obstacle	268
7.10	The T -matrix for two obstacles	274
7.11	The T -matrix for N obstacles	281
8	Approximations	284
8.1	Introduction	284
8.2	Small scatterers	284
8.3	Foldy's method	297
8.4	Point scatterers	304
8.5	Wide-spacing approximations	306
8.6	Random arrangements of small scatterers; suspensions	312
	Appendices	323
A	Legendre functions	323
B	Integrating a product of three spherical harmonics; Gaunt coefficients	325
C	Rotation matrices	329
D	One-dimensional finite-part integrals	333
E	Proof of Theorem 5.4	339
F	Two-dimensional finite-part integrals	343
G	Maue's formula	350
