<b>Preface</b>		<i>page xi</i>
<b>Acknowledgements</b>		xx
<b>Notation</b>		xxi
<b>1 The Big Questions</b>		<b>1</b>
1.1 Overview		1
1.2 Close to home		1
1.3 Into deepest time: Faint Young Sun and habitability of the Earth		6
1.4 Goldilocks in space: Earth, Mars, and Venus		14
1.5 Other Solar System planets and satellites		19
1.6 Farther afield: extrasolar planets		21
1.7 Digression: about climate proxies		27
1.8 The Proterozoic climate revisited: Snowball Earth		39
1.9 The hothouse/icehouse dichotomy		45
1.10 Pleistocene glacial–interglacial cycles		52
1.11 Holocene climate variation		56
1.12 Back to home: global warming		58
1.13 The fate of the Earth and the lifetime of biospheres		66
1.14 Workbook		68
1.15 For further reading		78
<b>2 Thermodynamics in a nutshell</b>		<b>81</b>
2.1 Overview		81
2.2 A few observations		81
2.3 Dry thermodynamics of an ideal gas		84
2.4 Static stability of inhomogeneous mixtures		93
2.5 The hydrostatic relation		96
2.6 Thermodynamics of phase change		98
2.7 The moist adiabat		103

viii	Contents	
2.8	Workbook	112
2.9	For further reading	132
<b>3</b>	<b>Elementary models of radiation balance</b>	<b>134</b>
3.1	Overview	134
3.2	Blackbody radiation	135
3.3	Radiation balance of planets	143
3.4	Ice-albedo feedback	153
3.5	Partially absorbing atmospheres	165
3.6	Optically thin atmospheres: the skin temperature	169
3.7	Workbook	174
3.8	For further reading	185
<b>4</b>	<b>Radiative transfer in temperature-stratified atmospheres</b>	<b>187</b>
4.1	Overview	187
4.2	Basic formulation of plane-parallel radiative transfer	188
4.3	The gray gas model	199
4.4	Real gas radiation: basic principles	216
4.5	Real gas <i>OLR</i> for all-troposphere atmospheres	263
4.6	Another look at the runaway greenhouse	281
4.7	Pure radiative equilibrium for real gas atmospheres	289
4.8	Tropopause height for real gas atmospheres	299
4.9	The lesson learned	302
4.10	Workbook	303
4.11	For further reading	313
<b>5</b>	<b>Scattering</b>	<b>316</b>
5.1	Overview	316
5.2	Basic concepts	318
5.3	Scattering by molecules: Rayleigh scattering	330
5.4	Scattering by particles	333
5.5	The two-stream equations with scattering	338
5.6	Some basic solutions	340
5.7	Numerical solution of the two-stream equations	348
5.8	Water and ice clouds	354
5.9	Things that go bump in the night: Infrared scattering with gaseous absorption	359
5.10	Effects of atmospheric solar absorption	362
5.11	Albedo of snow and ice	374
5.12	Workbook	375
5.13	For further reading	383
<b>6</b>	<b>The surface energy balance</b>	<b>386</b>
6.1	Overview	386
6.2	Radiative exchange	388
6.3	Basic models of turbulent exchange	395
6.4	Similarity theory for the surface layer	402

Contents	ix
6.5 Joint effect of the fluxes on surface conditions	409
6.6 Global warming and the surface budget fallacy	413
6.7 Mass balance and melting	415
6.8 Precipitation–temperature relations	417
6.9 Simple models of sea ice in equilibrium	420
6.10 Workbook	425
6.11 For further reading	431
<b>7 Variation of temperature with season and latitude</b>	<b>432</b>
7.1 Overview	432
7.2 A few observations of the Earth	433
7.3 Distribution of incident solar radiation	433
7.4 Thermal inertia	444
7.5 Some elementary orbital mechanics	457
7.6 Effect of long-term variation of orbital parameters	462
7.7 A palette of planetary seasonal cycles	469
7.8 Workbook	481
7.9 For further reading	496
<b>8 Evolution of the atmosphere</b>	<b>497</b>
8.1 Overview	497
8.2 About chemical reactions	499
8.3 Silicate weathering and atmospheric CO <sub>2</sub>	503
8.4 Partitioning of constituents between atmosphere and ocean	514
8.5 About ultraviolet	522
8.6 A few words about atmospheric chemistry	523
8.7 Escape of an atmosphere to space	534
8.8 Workbook	587
8.9 For further reading	597
<b>9 A peek at dynamics</b>	<b>599</b>
9.1 Overview	599
9.2 Horizontal heat transport	599
9.3 Dynamics of relative humidity	619
9.4 Dynamics of static stability	621
9.5 Afterword: endings and beginnings	622
9.6 Workbook	628
9.7 For further reading	633
<b>Index</b>	<b>635</b>
