Introduction	1
1 Prerequisites from group theory	8
1.1 Presentations of groups	9
1.2 Generalized quaternion groups	12
1.3 2-Groups without non-cyclic abelian characteristic subgroups	15
1.4 Transfer and fusion of elements	25
1.5 Coprime group actions	34
1.6 Simple groups with dihedral or semi-dihedral Sylow 2-subgroups	38
1.7 Simple groups with strongly embedded subgroups	40
2 Group representations and character theory	42
2.1 Algebras, modules and representations	43
2.2 Conjugacy classes of finite groups	52
2.3 Characters of finite groups	55
2.4 Characters and algebraic integers	64
2.5 Tensor products	68
2.6 Induction and restriction	74
2.7 Frobenius groups and exceptional characters	82
2.8 Brauer's characterization of characters	90
2.9 Projective representations and central extensions	97
3 Modular representation theory	110
3.1 Existence of splitting p -modular systems	112
3.2 Indecomposable modules	123
3.3 Semi-perfect rings	128
3.4 Group lattices and Heller modules	137
3.5 Relative-projective modules and homomorphisms	144
3.6 Blocks of finite groups	153
3.7 Defect groups	160
3.8 Brauer's first main theorem	163
3.9 Support and kernel of a block idempotent	170
3.10 Vertices and sources	174
3.11 Modular characters of finite groups	181
3.12 Blocks of defect zero	187
3.13 Green correspondence	189

3.14	Blocks and normal subgroups	200
3.15	Blocks with normal defect groups	206
3.16	Brauer's second and third main theorems	212
3.17	Blocks of defect one	222
4	Group order formulas and structure theorem	242
4.1	Suzuki's group order formula	243
4.2	Thompson's group order formula	246
4.3	Groups with a unique conjugacy class of involutions	248
4.4	Brauer's group order formula	256
4.5	A theorem of G. Frobenius	259
4.6	Brauer–Suzuki Theorem	260
4.7	Glauberman's Z^* -Theorem	266
4.8	Structure theorem	269
5	Permutation representations	277
5.1	Permutation groups	278
5.2	Orbits, stabilizers and group order	281
5.3	Conjugacy classes of permutation groups	289
5.4	Endomorphism rings of permutation modules	295
5.5	Intersection algebras	301
5.6	Character formula of Michler and Weller	307
5.7	Algorithm for computing character values	314
5.8	Completion of concrete character table calculations	316
6	Concrete character tables of matrix groups	320
6.1	Norton's irreducibility criterion	320
6.2	From matrix groups to permutation groups	324
6.3	Conjugacy classes of matrix groups	326
6.4	Example of a concrete character table calculation	328
7	Methods for constructing finite simple groups	333
7.1	Free products with an amalgamated subgroup	334
7.2	Irreducible representations of free products with amalgamated subgroups	341
7.3	Kratzer's algorithm computing compatible characters	348
7.4	Michler's algorithm constructing simple groups from given centralizers	354
7.5	Uniqueness criterion	364
8	Finite simple groups with proper satellites	376
8.1	Mathieu groups M_{11} and M_{12}	377
8.2	Mathieu groups M_{22} , M_{23} and M_{24}	388
8.3	The satellites of M_{24}	397

8.4	Generating matrices of the Held group He in $\text{GL}_{51}(11)$	406
8.5	Janko's sporadic groups J_2 and J_3	409
8.6	Simple satellites of the alternating groups	418
9	Janko group J_1	433
9.1	Structure of the given centralizer	433
9.2	Character table of groups of J_1 -type	435
9.3	Existence Proof	447
9.4	Uniqueness Proof	452
10	Higman–Sims group HS	455
10.1	Structure of the given centralizer	455
10.2	Fusion	457
10.3	Existence proof of HS inside $\text{GL}_{22}(11)$	473
10.4	Uniqueness of HS	476
10.5	A Presentation for $\text{Aut}(\text{HS})$	478
10.6	Representatives of conjugacy classes	480
10.7	Character tables	483
11	Harada group Ha	487
11.1	The centralizer of a 2-central involution	487
11.2	The existence proof	491
11.3	Uniqueness	497
11.4	Representatives of conjugacy classes	525
11.5	Character tables	530
11.6	Generating matrices $\mathcal{A}, \mathcal{B}, \mathcal{C} \in \text{GL}_{133}(19)$ of \mathfrak{G}	546
12	Thompson group Th	554
12.1	The centralizer of a 2-central involution	555
12.2	Conjugacy classes of elements of even order	557
12.3	Existence proof of Th inside $\text{GL}_{248}(11)$	561
12.4	Determination of the 3-singular conjugacy classes	571
12.5	The 5-, 7- and 13-singular conjugacy classes	598
12.6	Group order	607
12.7	Uniqueness proof and concrete character table	611
12.8	Representatives of conjugacy classes	616
12.9	Character tables	622
12.10	Partial character table of matrix group \mathfrak{G}	641
