	Introduction	<i>page 1</i>
1	Self-similar fragmentation chains	6
	1.1 Construction of fragmentation chains	6
	1.1.1 Preliminaries on Markov chains	7
	1.1.2 Branching Markov chains	11
	1.1.3 Fragmentation chains	16
	1.2 Genealogical structure	23
	1.2.1 The tree of generations	24
	1.2.2 Malthusian hypotheses and the intrinsic martingale	26
	1.2.3 A randomly tagged branch	31
	1.3 Extinction and formation of dust for $\alpha < 0$	37
	1.3.1 Extinction	38
	1.3.2 Formation of dust	40
	1.4 Some strong laws for $\alpha \geq 0$	43
	1.4.1 A variation of the law of large numbers	44
	1.4.2 The homogeneous case ($\alpha = 0$)	46
	1.4.3 The case $\alpha > 0$	49
	1.4.4 Another strong law via renewal theory	53
	1.5 Additive martingales (homogeneous case $\alpha = 0$)	55
	1.5.1 Convergence of additive martingales	56
	1.5.2 Some applications	58
	1.6 Comments	62
2	Random partitions	66
	2.1 Mass-partitions	66
	2.1.1 Partitions of a unit mass	66
	2.1.2 Interval-partitions	68
	2.1.3 Size-biased sampling and reordering	71

2.2	Random mass-partitions and Poisson measures	74
2.2.1	Multidimensional Dirichlet distributions	75
2.2.2	Some preliminaries on Poisson random measures	78
2.2.3	Mass-partitions induced by Poisson measures	81
2.2.4	Gamma subordinators and Dirichlet processes	87
2.2.5	Stable subordinators and Poisson-Dirichlet partitions	90
2.3	Exchangeable random partitions	94
2.3.1	Some definition	95
2.3.2	Kingman's theory	97
2.3.3	Exchangeable partition probability functions	105
2.4	Comments	110
3	Exchangeable fragmentations	112
3.1	Homogeneous fragmentation processes	112
3.1.1	Fragmentation of partitions	114
3.1.2	Homogeneous fragmentation as Markov processes	119
3.1.3	Poissonian structure	124
3.2	Asymptotic frequencies	125
3.2.1	Erosion and dislocation	126
3.2.2	Subordinator representation of the tagged fragment	132
3.2.3	Lévy-Itô decomposition of the tagged fragment	140
3.3	Self-similar fragmentations	144
3.3.1	Definition and first properties	145
3.3.2	Changing the index of self-similarity	149
3.3.3	Mass-fragmentations	152
3.4	Comments	160
4	Exchangeable coalescents	163
4.1	Kingman's coalescent	163
4.1.1	Genealogy of populations in the Wright-Fisher model	163
4.1.2	Construction of Kingman's coalescent	165
4.1.3	Interval representation of Kingman's coalescent	171
4.2	Simultaneous and multiple coagulations	173
4.2.1	Coagulation of partitions	174
4.2.2	Exchangeable coalescents and coagulation rates	177
4.2.3	Poissonian construction	179
4.2.4	Characterization of coagulation rates	181
4.3	Exchangeable mass-coalescents	185
4.3.1	Markov property	185
4.3.2	Dust in exchangeable mass-coalescents	187

Cambridge University Press

0521867282 - Random Fragmentation and Coagulation Processes

Table of Contents

[More information](#)

	<i>Contents</i>	vii
4.4	Simple coalescents and flows of bridges	189
4.4.1	Compositions of simple bridges	190
4.4.2	Flows of bridges and coagulation	196
4.4.3	The dual flow and a population model	200
4.4.4	The Bolthausen-Sznitman coalescent	205
4.5	Comments	211
5	Asymptotic regimes in stochastic coalescence	214
5.1	Stochastic coalescence	214
5.1.1	Coalescent chains	215
5.1.2	Extension to infinite systems	218
5.2	Hydrodynamic behavior and Smoluchowski's equations	226
5.2.1	The multiplicative kernel	227
5.2.2	Sub-multiplicative kernels	235
5.3	The additive coalescence	244
5.3.1	Some basic properties	244
5.3.2	Coagulation of trees in a random forest	247
5.3.3	The standard additive coalescent	254
5.3.4	A dual fragmentation process	258
5.4	Comments	261
