a posteriori probability (APP), 22, 142
a priori probability, 61, 142
absorbing sets, 318
accumulate LDPC (ALDPC) codes, 227
accumulate–repeat–accumulate (ARA) codes, 226
accumulator, 209, 211
additive white Gaussian noise, 5
A4RA codes, 104, 226
all-zeros codeword, 238
augmented state diagram, 285
AWGN channel, *see* BI-AWGN channel

base matrix, 102
Bayes' rule, 6
BCJR algorithm, 136
belief-propagation decoding, 50, 61
BI-AWGN channel, 5, 12, 14
binary decision, *see* hard decision
binary erasure channel (BEC), 4, 15
binary symmetric channel (BSC), 2, 13
bit error rate (BER), 24
bit error rate curve or plot, 25
bit filling, 101
bit-flipping decoding, 54
bit nodes, 39
block-circulant codes, 93
block code, 17, 29, 34
block error rate, *see* word error rate
block-MAP decoder, 22
blocks, of combinatorial designs, 106
branch metric, 159

candidate paths, 285
capacity, 13
capacity-achieving codes, 259
channel, 2
  BI-AWGN, 5, 12, 14
  binary erasure, 4, 15
  binary symmetric, 2, 13
  capacity, 13
  discrete, 2
  memoryless, 2
  symmetric, 3
check bits, *see* parity bits
check node, 39
check node decoder, 277
circulant matrix, 90
code length, 16
codeword, 1, 17, 34
column splitting, 100
combinatorial designs, 105
combiner, 209
component encoders, 165
concentration, 238
conditional entropy, 12
constraint length, 125n1
continuous random variable, 8
convolutional codes, 121
  decoding, 136
  effective free distance, 180
  encoding, 121
  IOWEF, 285
  minimum free distance, 135
  state, 121
  state diagram, 132
  transfer function, 286
  trellis, 132
correction term, 192
  log MAP decoding, 149, 156
cover of Tanner graph, 318
cross entropy, 195
crossover probability, 3
cycle in a Tanner graph, 40, 59, 82, 228
  4-cycle, 59
  6-cycle, 40
cycle-free graphs, 238
cyclic codes, 89

decoder, 1, 18
decoding, 18
  BCJR, 136, 193
  convolutional codes, 136
  erasures, 50
