

CONTENTS

<i>Preface</i>	ix	3.7 Drawing the Moon	61
<i>Acknowledgements</i>	xi	4 The Moon in camera	69
1 “Magnificent desolation”	1	4.1 Some basic principles of CCD astrocameras and digital cameras	72
1.1 An orbiting rock-ball	2	4.2 Practical CCD astrocameras and digital cameras	75
1.2 Phases and eclipses	3	4.3 The imaging area of a CCD camera when used on your telescope, or with an attached camera lens	77
1.3 Solar eclipses	11	4.4 Image scale using the supplied lenses on a ‘35 mm format’ DSLR	79
1.4 Gravity and tides	12	4.5 Practical lunar photography through the telescope – at the principal focus	79
1.5 More about the motions of the Moon – libration	13	4.6 The potential resolution of detail in the image	81
1.6 Co-ordinates on the surface of the Moon	16	4.7 Enlarging the telescope’s primary image	84
1.7 Occultations	20	4.8 Image processing	89
2 The Moon through the looking glass	21	5 Stacking up the Moon	97
2.1 The Moon in focus	22	5.1 The Moon and your domestic video camera	97
2.2 The pioneering selenographers	35	5.2 The benefits of stacking selected images	105
3 Telescopes and drawing boards	41		
3.1 What type of telescope do you need?	42		
3.2 How big a telescope do you need?	50		
3.3 So, what telescope should I spend my money on?	52		
3.4 Eyepiece characteristics	53		
3.5 Specific eyepiece types and magnification	55		
3.6 Making the best of what you have	58		

vi CONTENTS

5.3 Manually stacking individual frames	106	7.6 <i>Clementine</i> , Lunar Prospector and SMART-1 images and data online	152
5.4 The webcam revolution	109	7.7 Virtual Moon Atlas	152
5.5 Your webcam and computer	111	7.8 Lunar ephemerides	153
5.6 The webcam's first night on your telescope	116	7.9 Key map for Chapter 8	155
5.7 Stacking the images using <i>RegiStax</i>	117	8 'A to Z' of selected lunar landscapes	157
5.8 Processing the stacked image in <i>RegiStax</i>	121	8.1 Agarum, Promontorium	158
5.9 Striving for the best results	122	8.2 Albategnius	161
6 The physical Moon	125	8.3 Alpes, Vallis	161
6.1 The first lunar scouts	125	8.4 Alphonsus	163
6.2 Men on the Moon	128	8.5 Apenninus, Montes	166
6.3 The post- <i>Apollo</i> Moon	133	8.6 Ariadaeus, Rima	170
6.4 Not green cheese but ...	135	8.7 Aristarchus	173
6.5 Genesis of the Moon	136	8.8 Aristoteles	179
6.6 The Moon's structure	137	8.9 Bailly	181
6.7 The evolution of the Moon - a brief overview	139	8.10 Bullialdus	183
6.8 Lunar chronology	141	8.11 Cassini	186
6.9 Filling in the details	143	8.12 Clavius	189
7 Lunarware	145	8.13 Copernicus	192
7.1 Out-of-print books	145	8.14 Crisium, Mare	200
7.2 Books currently in print	146	8.15 Endymion	206
7.3 Printed maps, charts and atlases	147	8.16 Fra Mauro	210
7.4 Some useful website addresses concerning equipment and techniques	149	8.17 Furnerius	215
7.5 <i>Consolidated Lunar Atlas</i> , <i>Lunar Orbiter Photographic Atlas</i> , <i>Apollo Image Atlas</i> and <i>Ranger</i> photographs online	151	8.18 'Gruithuisen's lunar city'	221
		8.19 Harbinger, Montes	224
		8.20 Hevelius	227
		8.21 Hortensius	234
		8.22 Humorum, Mare	237
		8.23 Hyginus, Rima	245
		8.24 Imbrium, Mare	248
		8.25 Janssen	258
		8.26 Langrenus	262
		8.27 Maestlin R	267
		8.28 Messier	269
		8.29 Moretus	271

8.30 Nectaris, Mare	273	8.48 Wichmann	351
8.31 Neper	278	8.49 Webcam gallery	353
8.32 Pitatus	281	9 TLP or not TLP?	357
8.33 Plato	285	9.1 The mystery unfolds	357
8.34 Plinius	292	9.2 Categories of TLP	362
8.35 Posidonius	297	9.3 The mystery continues	363
8.36 Pythagoras	301	9.4 What might be the cause(s) of TLP?	371
8.37 Ramsden	304	9.5 Possible causes of bogus TLP	376
8.38 Regiomontanus	308	9.6 TLP observing programme	378
8.39 Russell	313	<i>Appendix 1: Telescope collimation</i>	381
8.40 Schickard	318	<i>Appendix 2: Field-testing a telescope's optics</i>	393
8.41 Schiller	322	<i>Appendix 3: Polar alignment</i>	397
8.42 Sirsalis, Rimae	326	<i>Index</i>	401
8.43 'Straight Wall' (Rupes Recta)	331		
8.44 Theophilus	334		
8.45 Torricelli	339		
8.46 Tycho	341		
8.47 Wargentín	348
