

Index

- Abelian theorems, 150
- acoustic material signature, 116, 118
- acoustic microscope, 98
- admittance, 74
- angular frequency
 - defined, 11
- angular spectrum
 - spherical wave, 55
- antiplane shear motion, 4
- asymptotic approximation
 - Abelian theorem, 44
 - double integral, 32n, 58
 - non-uniform, pole present, 49
 - stationary phase, 34
 - steepest descents, 47–48
 - uniform, pole present, 46–48
- asymptotic expansion, not Poincaré type, 149
- asymptotic expansion, Poincaré type, 148
- asymptotic sequence, 148
- beam
 - unfocused, acoustic, 35–36
- circular annulus, 141
- complex source, 74
- compressional wave, defined, 6
- continuity conditions, fluid–solid interface, 6–54
- cracks, 81, 89
- curved waveguide, 141
- damped wave equation, 122
- diffraction
 - edge-diffracted wave, 25
 - edge-diffraction integral, 28, 32
 - through a circular aperture, 24
 - diffracted by an elastic sphere, 130
 - diffracted by a half-plane, 123
 - diffracted coefficient, 33, 47
 - dispersion, *see* velocity, group
 - periodic structure, 19
 - dispersion curve, 134
 - dispersion relation, 134, 137, 138, 141
 - dispersion relation, Rayleigh–Lamb, 63
 - drive point admittance, 74
- edge diffraction
 - acoustic, 40–49
 - problem defined, 42
 - acoustic in three dimensions, 45–46
 - qualitative features, 47
 - Wiener–Hopf, 41–45
- eigenvalue problem, 66
- elastic waveguide, 136
- electromechanical reciprocity, 110–113
 - reflection coefficient, 113
 - reflection coefficient calculated, 111
- electromechanical reciprocity identity, 113
- energy flux, 8
 - complex, 8
 - radiation resistance, 40
 - time average, 8
- energy relations
 - conservation law, 7
- equations of motion, 7
 - one-dimensional, 3
 - two-dimensional, 4
 - antiplane motion, 4
 - inplane motion, 4
- error function, *see* Fresnel integral

- F number, 99
- focal length, 99
- focused beam, converging reflected, 107
 - diverging reflected, 105
 - representations, 101
 - scattered, 103
- Fourier transform
 - space, 12
 - time, 9
- frequency
 - defined, 11
- Fresnel integral
 - asymptotic behavior, 155
- Fresnel length
 - F_l , 28
 - beam, 35
- Fresnel number, 99
- Fresnel region, 47–49
 - F_r , 49
 - radiation from a piston, 51
- Gaussian beam, 75
- geometrical (theory of) diffraction
 - radiation from a piston, 32–34
- Green's function
 - piston problem, 27
- Green's tensor, 72, 73
- group velocity, 8, 135, 146
- Hankel function, 154
- Hankel transform, 28, 36, 155
- Helmholtz decomposition, 72
- Helmholtz theorem, 5
- Huygens' principle, 25, 26–28
- hypersingular, 84
- hypersingular boundary integral
 - equations, 82
- imaging equation, 116
- impedance, 73, 76
- inplane motion, 4
- isolated, first-order saddle point, 151
- isolated, first-order stationary-phase
 - point, 151
- Kirchhoff approximation, 84
- Lamé's elastic constants, 2
- Laplace transform
 - time, 9
- leaky Rayleigh pole, 59
- leaky Rayleigh wave, 59, 98, 109, 118
- leaky Rayleigh wave, filling lens
 - aperture, 106
- leaky wave, 53
- limiting absorption, principle of, 6
- longitudinal strain, 3
- longitudinal stress, 4
- long-wave theory, 140, 143
- low-frequency scattering, 86
- Maggi transformation, 31, 32
- Maxwell's equations, 110
- measurement model, 113, 115
- microscope, acoustic reflection, imaging
 - equation, 116
- microscope, acoustic reflection,
 - qualitative description, 97
- mixed boundary condition, 3
- Parseval's relation, 40
- partial waves, 19
- passbands, 18
- periodic structure, 17–20
 - effective wavenumber, 19
- piezoelectricity, equations of, 109–110
- plane-wave representation, 42
- Poisson summation formula, 12
- polarization vector, 57
- potentials, displacement, 5
 - scalar potential, 5
 - vector potential, 5
- propagation matrix, 17
- propagation vector, 57
- radial basis function, 91
- radiation
 - from a piston, 24–40
 - problem defined, 26
 - impedance, 38–40
- radiation impedance, 39
- Rayleigh function, 64
- Rayleigh wave, focusing, 107
- Rayleigh–Lamb dispersion relation, 137
- Rayleigh–Lamb modes, 62, 63, 137
- reciprocity, 71, 78, 109
 - elastodynamic, 72
- reflected plane wave, 57
- reflection coefficient, 57
 - poles and branch points of, 59
- reflection, measured at transducer, 115
- Riemann sheet, physical, 36, 43, 59, 104
- scalar potential, *see* potentials,
 - displacement
- scattering
 - Bragg, 19
 - from a lumped mass, 15
 - scattering matrix, 16
- shear horizontal motion, 4
- shear wave, defined, 6
- Sommerfeld transformation, 37

- spectrum
 - angular, 25
- spectrum, angular
 - radiation from a piston, 36–37
- spherical wave
 - angular spectrum, 55
 - at a plane interface, 127
 - converging, 100
 - cylindrical-wave representation, 56
- standing wave, defined, 11
- steepest-descents contour, 47, 151
- Stokes layer, 122
- Stoneley pole, 59
- Stoneley wave, 59
- stopbands, 18
- strain tensor, 2
- stress tensor, 2
- symmetries, waveguide eigenmodes, 67

- Tauberian theorems, 150
- time average, 7
 - product, 8
- traction, 2
- transforms, Fourier and Laplace, *see*
 - Fourier transform, Laplace transform
 defined, 9–12

- transmission coefficient, 57
- transmission matrix, 16
- transmitted plane waves, 57
- trapped modes, 142

- uniform asymptotic approximation, 149

- vector potential, *see* potentials, displacement
- velocity
 - group
 - periodic structure, 20
- vibration, 12
- viscosity, 121
- viscous fluid, 121
- vorticity, 122

- waveguides, 133, 136
- wavelength, defined, 11
- wavenumber
 - defined, 10
 - effective, periodic structure, 19
- wavespeed
 - compressional, 6
 - shear, 6
- Wiener–Hopf
 - acoustic edge diffraction, 42–45
