<i>Foreword</i>	<i>page</i> ix
1 Linear elastic waves	1
1.1 Model equations	1
1.2 Continuity and boundary conditions	6
1.3 Flux of energy	6
1.4 The Fourier and Laplace transforms	9
1.5 A wave is not a vibration	12
1.6 Dispersive propagation	15
1.7 General references	20
2 Canonical acoustic-wave problems	23
2.1 Radiation from a piston in an infinite baffle	23
2.2 Diffraction of an acoustic plane wave by an edge	40
2.3 Summary	50
3 Canonical elastic-wave problems	52
3.1 The scattering of a spherical wave from a fluid–solid interface	52
3.2 Rayleigh–Lamb modes and Rayleigh surface waves	62
4 Radiation and impedance	71
4.1 Reciprocity	71
4.2 Green’s tensor	72
4.3 Reciprocity revisited	78
4.4 Force on a particle from an elastic wave	79
5 Integral equations for crack scattering	81
5.1 Formulation	81
5.2 A hypersingular integral equation	84
5.3 Low-frequency scattering	86

viii	<i>Contents</i>	
	5.4 Some strategies	88
	5.5 Flat cracks as a special case	88
	5.6 Flat cracks: direct approach	89
	5.7 Flat cracks: how to compute [u]	91
	5.8 Curved cracks	93
6	Scanned acoustic imaging	96
	6.1 Scanned, reflection acoustic microscope	97
	6.2 Fresnel and F number	99
	6.3 Converging spherical wave	99
	6.4 Focused acoustic beam	101
	6.5 Scattered focused beam	103
	6.6 An electromechanical reciprocity relation	109
	6.7 Measurement model	113
	6.8 Acoustic material signature	116
	6.9 Summary	119
7	Acoustic diffraction in viscous fluids	121
	7.1 Theory	121
	7.2 Diffraction by a half-plane	123
	7.3 Scattering of a spherical wave at a plane interface	127
	7.4 Diffraction by an elastic sphere	130
8	Near-cut-off behavior in waveguides	133
	8.1 Shear horizontal and acoustic waveguides	133
	8.2 Elastic waveguides	136
	8.3 Long waves	138
	Appendix A Asymptotic expansions	147
	Appendix B Some special functions	154
	<i>References</i>	157
	<i>Index</i>	163
