<i>Preface</i>	<i>page</i> ix
<i>Acknowledgements</i>	xi
1 Climate Variability	1
1.1 The observational database	2
1.2 Phenomena: temporal and spatial scales	4
1.3 The climate system	6
1.4 The stochastic dynamical systems framework	7
1.5 Overview of the book	9
2 Deterministic Dynamical Systems	11
2.1 Finite dimensional dynamical systems	11
2.2 Stability theory and transient behaviour	13
2.3 Bifurcation theory: fixed points	19
2.4 Bifurcation theory: periodic orbits	25
2.5 Beyond simple behaviour: attractors	28
3 Introduction to Stochastic Calculus	35
3.1 Random variables	35
3.2 Stochastic processes	38
3.3 Stochastic calculus	40
3.4 Stochastic differential equations	45
3.5 The Fokker-Planck equations	51
3.6 Numerical solutions of SDEs	58
4 Stochastic Dynamical Systems	64
4.1 Nonautonomous dynamical systems	64
4.2 Random dynamical systems	67
4.3 Stochastic bifurcations	77

vi	<i>Contents</i>	
5	Analysing Data from Stochastic Dynamical Systems	83
5.1	Classical univariate methods	83
5.2	Hypothesis testing and significance	89
5.3	Bivariate and multivariate analysis	93
5.4	Nonstationary methods: wavelets	102
5.5	Nonlinear methods	103
6	The Climate Modelling Hierarchy	116
6.1	Model traits: scales and processes	117
6.2	Scientific questions and model choice	123
6.3	Deterministic versus stochastic models	124
6.4	Model error	128
7	The North Atlantic Oscillation	131
7.1	Midlatitude atmospheric variability	131
7.2	Minimal model	137
7.3	Variability in conceptual models	139
7.4	Beyond conceptual models	149
7.5	Regime transitions and metastable states	160
7.6	Synthesis	163
8	El Niño Variability	167
8.1	Phenomena	167
8.2	A minimal model	170
8.3	The ENSO mode	177
8.4	Excitation of the ENSO mode	185
8.5	ENSO's phase locking to the seasonal cycle	190
8.6	The irregularity of El Niño	192
8.7	Synthesis	200
9	Multidecadal Variability	202
9.1	Introduction	202
9.2	Stability of the thermally driven ocean flows	206
9.3	Excitation of the AMO mode	213
9.4	Dynamical mechanisms of excitation	217
9.5	Context of the AMO: two time scales?	225
9.6	Synthesis	227
10	Dansgaard-Oeschger Events	231
10.1	Phenomena	231
10.2	The meridional overturning circulation	233
10.3	Sensitivity of the MOC: hysteresis	236
10.4	Variability of the MOC: oscillations	240
10.5	Effects of noise: stochastic resonance	248
10.6	Climate models	263
10.7	Synthesis	265

<i>Contents</i>		vii
11	The Pleistocene Ice Ages	270
11.1	Phenomena	270
11.2	The ‘null hypothesis’: Milankovitch theory	272
11.3	Potentially important feedbacks	274
11.4	Basic theories of interglacial-glacial cycles	282
11.5	The role of the carbon cycle	293
11.6	Synthesis	299
12	Predictability	301
12.1	The prediction problem	302
12.2	Concepts of predictability	307
12.3	Behaviour of nearby trajectories	314
12.4	Data assimilation	324
12.5	Outlook	334
	<i>References</i>	337
	<i>Copyright Acknowledgements</i>	353
	<i>Index</i>	355
