

## Contents

|   |                |
|---|----------------|
| <i>Preface</i>  | <i>page xi</i> |
| <i>Acknowledgements</i>   | xv             |
| <i>List of abbreviations</i>  | xvii           |
| <b>1 Preliminaries: networks and graphs</b>                         | <b>1</b>       |
| 1.1 What is a network?  | 1              |
| 1.2 Basic concepts in graph theory                                  | 2              |
| 1.3 Statistical characterization of networks                        | 11             |
| 1.4 Weighted networks   | 19             |
| <b>2 Networks and complexity</b>                                    | <b>24</b>      |
| 2.1 Real-world systems  | 24             |
| 2.2 Network classes   | 34             |
| 2.3 The complicated and the complex                                 | 47             |
| <b>3 Network models</b>   | <b>50</b>      |
| 3.1 Randomness and network models                                   | 50             |
| 3.2 Exponential random graphs                                       | 58             |
| 3.3 Evolving networks and the non-equilibrium approach              | 60             |
| 3.4 Modeling higher order statistics and other attributes           | 72             |
| 3.5 Modeling frameworks and model validation                        | 74             |
| <b>4 Introduction to dynamical processes: theory and simulation</b> | <b>77</b>      |
| 4.1 A microscopic approach to dynamical phenomena                   | 77             |
| 4.2 Equilibrium and non-equilibrium systems                         | 79             |
| 4.3 Approximate solutions of the Master Equation                    | 82             |
| 4.4 Agent-based modeling and numerical simulations                  | 85             |
| <b>5 Phase transitions on complex networks</b>                      | <b>92</b>      |
| 5.1 Phase transitions and the Ising model                           | 92             |
| 5.2 Equilibrium statistical physics of critical phenomena           | 96             |
| 5.3 The Ising model in complex networks                             | 101            |

|           |   |            |

| 5.4       | Dynamics of ordering processes                          | 108        |
| 5.5       | Phenomenological theory of phase transitions            | 111        |
| <b>6</b>  | <b>Resilience and robustness of networks</b>            | <b>116</b> |
| 6.1       | Damaging networks                                       | 116        |
| 6.2       | Percolation phenomena as critical phase transitions     | 120        |
| 6.3       | Percolation in complex networks                         | 124        |
| 6.4       | Damage and resilience in networks                       | 126        |
| 6.5       | Targeted attacks on large degree nodes                  | 129        |
| 6.6       | Damage in real-world networks                           | 135        |
| <b>7</b>  | <b>Synchronization phenomena in networks</b>            | <b>136</b> |
| 7.1       | General framework                                       | 136        |
| 7.2       | Linearly coupled identical oscillators                  | 138        |
| 7.3       | Non-linear coupling: firing and pulse                   | 148        |
| 7.4       | Non-identical oscillators: the Kuramoto model           | 151        |
| 7.5       | Synchronization paths in complex networks               | 156        |
| 7.6       | Synchronization phenomena as a topology probing tool    | 158        |
| <b>8</b>  | <b>Walking and searching on networks</b>                | <b>160</b> |
| 8.1       | Diffusion processes and random walks                    | 160        |
| 8.2       | Diffusion in directed networks and ranking algorithms   | 166        |
| 8.3       | Searching strategies in complex networks                | 170        |
| <b>9</b>  | <b>Epidemic spreading in population networks</b>        | <b>180</b> |
| 9.1       | Epidemic models   | 180        |
| 9.2       | Epidemics in heterogeneous networks                     | 189        |
| 9.3       | The large time limit of epidemic outbreaks              | 197        |
| 9.4       | Immunization of heterogeneous networks                  | 207        |
| 9.5       | Complex networks and epidemic forecast                  | 212        |
| <b>10</b> | <b>Social networks and collective behavior</b>          | <b>216</b> |
| 10.1      | Social influence  | 216        |
| 10.2      | Rumor and information spreading                         | 218        |
| 10.3      | Opinion formation and the Voter model                   | 225        |
| 10.4      | The Axelrod model                                       | 232        |
| 10.5      | Prisoner's dilemma                                      | 235        |
| 10.6      | Coevolution of opinions and network                     | 238        |
| <b>11</b> | <b>Traffic on complex networks</b>                      | <b>242</b> |
| 11.1      | Traffic and congestion                                  | 242        |
| 11.2      | Traffic and congestion in distributed routing           | 246        |
| 11.3      | Avalanches  | 256        |
| 11.4      | Stylized models and real-world infrastructures          | 264        |
| <b>12</b> | <b>Networks in biology: from the cell to ecosystems</b> | <b>267</b> |
| 12.1      | Cell biology and networks                               | 268        |
