	<i>Notation</i>	<i>page xi</i>
	<i>Introduction</i>	xv
<b>1</b>	<b>Preliminaries</b>	<b>1</b>
	1.1 Regularly varying functions and their main properties	1
	1.2 Subexponential distributions	13
	1.3 Locally subexponential distributions	44
	1.4 Asymptotic properties of ‘functions of distributions’	51
	1.5 The convergence of distributions of sums of random variables with regularly varying tails to stable laws	57
	1.6 Functional limit theorems	75
<b>2</b>	<b>Random walks with jumps having no finite first moment</b>	<b>80</b>
	2.1 Introduction. The main approach to bounding from above the distribution tails of the maxima of sums of random variables	80
	2.2 Upper bounds for the distribution of the maximum of sums when $\alpha \leq 1$ and the left tail is arbitrary	84
	2.3 Upper bounds for the distribution of the sum of random variables when the left tail dominates the right tail	91
	2.4 Upper bounds for the distribution of the maximum of sums when the left tail is substantially heavier than the right tail	97
	2.5 Lower bounds for the distributions of the sums. Finiteness criteria for the maximum of the sums	103
	2.6 The asymptotic behaviour of the probabilities $\mathbf{P}(S_n \geq x)$	110
	2.7 The asymptotic behaviour of the probabilities $\mathbf{P}(\bar{S}_n \geq x)$	120
<b>3</b>	<b>Random walks with jumps having finite mean and infinite variance</b>	<b>127</b>
	3.1 Upper bounds for the distribution of $\bar{S}_n$	127
	3.2 Upper bounds for the distribution of $\bar{S}_n(a)$ , $a > 0$	137
	3.3 Lower bounds for the distribution of $S_n$	141
	3.4 Asymptotics of $\mathbf{P}(S_n \geq x)$ and its refinements	142
	3.5 Asymptotics of $\mathbf{P}(\bar{S}_n \geq x)$ and its refinements	149

vi	<i>Contents</i>	
	3.6	The asymptotics of $\mathbf{P}(\bar{S}(a) \geq x)$ with refinements and the general boundary problem 154
	3.7	Integro-local theorems on large deviations of $S_n$ for index $-\alpha$ , $\alpha \in (0, 2)$ 166
	3.8	Uniform relative convergence to a stable law 173
	3.9	Analogues of the law of the iterated logarithm in the case of infinite variance 176
<b>4</b>		<b>Random walks with jumps having finite variance 182</b>
	4.1	Upper bounds for the distribution of $\bar{S}_n$ 182
	4.2	Upper bounds for the distribution of $\bar{S}_n(a)$ , $a > 0$ 191
	4.3	Lower bounds for the distributions of $S_n$ and $\bar{S}_n(a)$ 194
	4.4	Asymptotics of $\mathbf{P}(S_n \geq x)$ and its refinements 197
	4.5	Asymptotics of $\mathbf{P}(\bar{S}_n \geq x)$ and its refinements 204
	4.6	Asymptotics of $\mathbf{P}(\bar{S}(a) \geq x)$ and its refinements. The general boundary problem 208
	4.7	Integro-local theorems for the sums $S_n$ 217
	4.8	Extension of results on the asymptotics of $\mathbf{P}(S_n \geq x)$ and $\mathbf{P}(\bar{S}_n \geq x)$ to wider classes of jump distributions 224
	4.9	The distribution of the trajectory $\{S_k\}$ given that $S_n \geq x$ or $\bar{S}_n \geq x$ 228
<b>5</b>		<b>Random walks with semiexponential jump distributions 233</b>
	5.1	Introduction 233
	5.2	Bounds for the distributions of $S_n$ and $\bar{S}_n$ , and their consequences 238
	5.3	Bounds for the distribution of $\bar{S}_n(a)$ 247
	5.4	Large deviations of the sums $S_n$ 250
	5.5	Large deviations of the maxima $\bar{S}_n$ 268
	5.6	Large deviations of $\bar{S}_n(a)$ when $a > 0$ 274
	5.7	Large deviations of $\bar{S}_n(-a)$ when $a > 0$ 287
	5.8	Integro-local and integral theorems on the whole real line 290
	5.9	Additivity (subexponentiality) zones for various distribution classes 296
<b>6</b>		<b>Large deviations on the boundary of and outside the Cramér zone for random walks with jump distributions decaying exponentially fast 300</b>
	6.1	Introduction. The main method of studying large deviations when Cramér's condition holds. Applicability bounds 300
	6.2	Integro-local theorems for sums $S_n$ of r.v.'s with distributions from the class $\mathcal{ER}$ when the function $V(t)$ is of index from the interval $(-1, -3)$ 308

<i>Contents</i>		vii
6.3	Integro-local theorems for the sums $S_n$ when the Cramér transform for the summands has a finite variance at the right boundary point	315
6.4	The conditional distribution of the trajectory $\{S_k\}$ given $S_n \in \Delta[x]$	318
6.5	Asymptotics of the probability of the crossing of a remote boundary by the random walk	319
<b>7</b>	<b>Asymptotic properties of functions of regularly varying and semiexponential distributions. Asymptotics of the distributions of stopped sums and their maxima. An alternative approach to studying the asymptotics of <math>\mathbf{P}(S_n \geq x)</math></b>	<b>335</b>
7.1	Functions of regularly varying distributions	335
7.2	Functions of semiexponential distributions	341
7.3	Functions of distributions interpreted as the distributions of stopped sums. Asymptotics for the maxima of stopped sums	344
7.4	Sums stopped at an arbitrary Markov time	347
7.5	An alternative approach to studying the asymptotics of $\mathbf{P}(S_n \geq x)$ for sub- and semiexponential distributions of the summands	354
7.6	A Poissonian representation for the supremum $\bar{S}$ and the time when it was attained	367
<b>8</b>	<b>On the asymptotics of the first hitting times</b>	<b>369</b>
8.1	Introduction	369
8.2	A fixed level $x$	370
8.3	A growing level $x$	391
<b>9</b>	<b>Integro-local and integral large deviation theorems for sums of random vectors</b>	<b>398</b>
9.1	Introduction	398
9.2	Integro-local large deviation theorems for sums of independent random vectors with regularly varying distributions	402
9.3	Integral theorems	412
<b>10</b>	<b>Large deviations in trajectory space</b>	<b>417</b>
10.1	Introduction	417
10.2	One-sided large deviations in trajectory space	418
10.3	The general case	422
<b>11</b>	<b>Large deviations of sums of random variables of two types</b>	<b>427</b>
11.1	The formulation of the problem for sums of random variables of two types	427
11.2	Asymptotics of $P(m, n, x)$ related to the class of regularly varying distributions	429

viii	<i>Contents</i>	
	11.3 Asymptotics of $P(m, n, x)$ related to semiexponential distributions	432
<b>12</b>	<b>Random walks with non-identically distributed jumps in the triangular array scheme in the case of infinite second moment. Transient phenomena</b>	439
	12.1 Upper and lower bounds for the distributions of $\bar{S}_n$ and $S_n$	439
	12.2 Asymptotics of the crossing of an arbitrary remote boundary	454
	12.3 Asymptotics of the probability of the crossing of an arbitrary remote boundary on an unbounded time interval. Bounds for the first crossing time	457
	12.4 Convergence in the triangular array scheme of random walks with non-identically distributed jumps to stable processes	464
	12.5 Transient phenomena	471
<b>13</b>	<b>Random walks with non-identically distributed jumps in the triangular array scheme in the case of finite variances</b>	482
	13.1 Upper and lower bounds for the distributions of $\bar{S}_n$ and $S_n$	482
	13.2 Asymptotics of the probability of the crossing of an arbitrary remote boundary	495
	13.3 The invariance principle. Transient phenomena	502
<b>14</b>	<b>Random walks with dependent jumps</b>	506
	14.1 The classes of random walks with dependent jumps that admit asymptotic analysis	506
	14.2 Martingales on countable Markov chains. The main results of the asymptotic analysis when the jump variances can be infinite	509
	14.3 Martingales on countable Markov chains. The main results of the asymptotic analysis in the case of finite variances	514
	14.4 Arbitrary random walks on countable Markov chains	516
<b>15</b>	<b>Extension of the results of Chapters 2–5 to continuous-time random processes with independent increments</b>	522
	15.1 Introduction	522
	15.2 The first approach, based on using the closeness of the trajectories of processes in discrete and continuous time	525
	15.3 The construction of a full analogue of the asymptotic analysis from Chapters 2–5 for random processes with independent increments	532
<b>16</b>	<b>Extension of the results of Chapters 3 and 4 to generalized renewal processes</b>	543
	16.1 Introduction	543
	16.2 Large deviation probabilities for $S(T)$ and $\bar{S}(T)$	551
	16.3 Asymptotic expansions	574
