- abelian hereditary categories
 - of canonical type 383
- adjunction isomorphism 6
- admissible coray module 19
- admissible group of
 - automorphisms 396
- admissible ray module 19, 68
- affine variety 366
- algebra of finite growth 340
- algebra of fully wild
 - representation type 313
- algebra of linear growth 340
- algebra of polynomial growth 340
- algebra of small homological
 - dimension 386
- algebra of strictly wild
 - representation type 311
- algebra of tame
 - representation type 339
- algebra of wild
 - representation type 311
- almost cyclic component 362, 390
- almost periodic component 362, 390
- almost sectional path 387

- bocs 340
- branch 38, 66
- branch algebra 66
- branch coextension 383
- branch extension 383
- branch \mathcal{T} -coextension algebra 42
- branch \mathcal{T} -extension algebra 41
- brick 236

- canonical algebra 380
- canonical family of stable tubes 380
- canonical tubular algebras 353
- capacity of a branch 66
- $\text{card}(K)$ -family 288
- category almost parametrised
 - by functors 338
- category of representations of
 - a bimodule 6
- category of strictly wild
 - representation type 311
- category of wild representation
 - type 311
- category parametrised by functors 338
- coherent component 362
- concealed algebra of Euclidean
 - type 6
- concealed canonical algebra 380
- concealed domain $\mathcal{DP}(A)$ 187, 188
- cone $\mathcal{C}(M)$ 239
- cone of a component 67
- connecting component \mathcal{C}_T 300, 389
- convex subalgebra 369
- core 391
- coray tube 34
- Coxeter matrix Φ_A 216
- Coxeter transformation Φ_A 216
- critical algebra 369, 371
- crown 107, 187
- cyclic component 362
- \mathcal{T}_λ -length of a module 105
- \mathcal{T} -tubular coextension 33
- \mathcal{T} -tubular extension 33

- depth of a cone 67
- derived category 382
- derived equivalent algebras 382
- dihedral group 355
- domestic algebra 342
- domestic n -parametric algebra 342
- domestic tubular coextension 53
- domestic tubular extension 53
- double section 387
- double tilted algebra 388, 392
- Dynkin quiver xi

- endo-wild algebra 329
- enlarged Kronecker algebra 225
- enlarged Kronecker quiver 225
- equioriented linear quiver 67, 78
- exceptional module 104
- extension algebra 397
- external short cycle 381
- Euclidean diagrams ix
- Euclidean quiver xi

- finite line extension of an algebra 69
- finitely generated algebra 314
- finite ray module of a component 68
- finite rectangle insertion 69, 72
- finite t -linear extension of an algebra 68
- four subspace quiver 152, 252
- Frobenius algebra 396
- fully wild algebra 313
- functor respecting isomorphism classes 310
- functor respecting isomorphisms 310
- fundamental group of a bound quiver 368

- Galois covering 397
- generalised double tilted algebra 391
- generalised multicoil enlargement 394
- generalised multicoil translation quiver 362

- genus of a concealed canonical algebra 381
- geometric context 366
- germ of a branch 38, 66
- germ of a cone 67, 239
- group algebra 355

- hereditary category 378
- hypercritical algebra 369

- Kronecker quiver 5, 341

- left part of a double section 388
- left part of a multisection 391
- left part of a tilted algebra 377
- left perpendicular category 250
- left quasitilted part 395
- left tilted algebra 388
- length s_X of a ray 68
- line coextension 21
 - t -linear coextension of A at X 21
- line extension 21
 - t -linear extension of A at X 21
- link controlled module category 196
- locally nilpotent infinite radical 372
- locally support-finite algebra 397

- mesh-closed translation subquiver 239
- module category link controlled by q_A 196
- multiple one-point \mathcal{T} -coextension algebra 40
- multiple one-point \mathcal{T} -extension algebra 40
- multisection 390

- Nakayama automorphism 397
- nilpotent infinite radical 371

- one-point coextension 4
- one-point extension 4
- orbit algebra 397

- orbit category 397
- orthogonal modules 240
- orthogonal tubes 15
- parameter sequence 380
- perpendicular category 250
- positive automorphism 400
- projective line $\mathbb{P}_1(K)$ 1
- push-down functor 397
- quasi-simple module 221
- quasi-length 222
- quasitilted algebra 378
- quasitilted algebra of
 - canonical type 383
- quaternion group 355
- rank of a coray tube 34
- rank of a ray tube 34
- ray of length s_X 68
- ray tube 34
- rectangle insertion 22, 25, 69, 72
- regular component 360
- repetitive category 396
- representation-domestic algebra 342
- representation embedding functor 310
- representation equivalence 310
- representation-tame algebra 339
- representation-wild algebra 269, 311
- representation-wild hereditary algebra 213
- representation-wild path algebra 269
- representation-wild quiver 213, 269
- right part of a double section 388
- right part of a multisection 391
- right part of a tilted algebra 377
- right perpendicular subcategory 250
- right quasitilted part 395
- right tilted algebra 388
- rigid automorphism 400
- rigid module 104
- section, n -section 391
- selfinjective algebra of Dynkin type 398
- selfinjective algebra of Euclidean type 398
- selfinjective algebra of quasitilted type 398
- selfinjective algebra of tilted type 398
- selfinjective algebra of tubular type 398
- selfinjective algebra of wild canonical type 398
- selfinjective algebra of wild tilted type 398
- semidihedral group 355
- semiregular branch enlargement 384
- semiregular component 360
- semiregular family of tubes 384
- shod algebra 386
- simply connected algebra 368
- sincere family of components 381
- socle deformation 398
- stable module category 402
- stably equivalent algebras 402
- standard cone $\mathcal{C}([X[m]])$ 240
- stone 104, 236
- stone cone 105
- stone crown of an algebra 187
- stone crown of a tube 107
- strict double section 387
- strict double tilted algebra 388
- strictly positive automorphism 400
- strictly representation-wild algebra 273, 311
- strictly wild module category 311
- strictly wild algebra 273, 311
- strict shod algebra 386
- strongly simply connected algebra 369
- symmetric algebra 396
- tame algebra 339
