

Contents

<i>Preface</i>	<i>page xi</i>
1 Introduction	1
1.1 The Five Big Questions	2
1.2 Presumptions	15
2 The Riemann Integral	23
2.1 Existence	24
2.2 Nondifferentiable Integrals	33
2.3 The Class of 1870	40
3 Explorations of \mathbb{R}	51
3.1 Geometry of \mathbb{R}	51
3.2 Accommodating Algebra	59
3.3 Set Theory	71
4 Nowhere Dense Sets and the Problem with the Fundamental Theorem of Calculus	81
4.1 The Smith–Volterra–Cantor Sets	82
4.2 Volterra's Function	89
4.3 Term-by-Term Integration	98
4.4 The Baire Category Theorem	109
5 The Development of Measure Theory	120
5.1 Peano, Jordan, and Borel	122
5.2 Lebesgue Measure	131
5.3 Carathéodory's Condition	140
5.4 Nonmeasurable Sets	150
6 The Lebesgue Integral	159
6.1 Measurable Functions	159
6.2 Integration	169
6.3 Lebesgue's Dominated Convergence Theorem	183
6.4 Egorov's Theorem	191

Cambridge University Press

978-0-521-88474-7 - A Radical Approach to Lebesgue's Theory of Integration

David M. Bressoud

Table of Contents

[More information](#)

x	<i>Contents</i>	
7	The Fundamental Theorem of Calculus	203
7.1	The Dini Derivatives	204
7.2	Monotonicity Implies Differentiability Almost Everywhere	212
7.3	Absolute Continuity	223
7.4	Lebesgue's FTC	231
8	Fourier Series	241
8.1	Pointwise Convergence	242
8.2	Metric Spaces	251
8.3	Banach Spaces	263
8.4	Hilbert Spaces	271
9	Epilogue	282
	Appendixes	287
A	Other Directions	287
A.1	The Cardinality of the Collection of Borel Sets	287
A.2	The Generalized Riemann Integral	291
B	Hints to Selected Exercises	299
	<i>Bibliography</i>	317
	<i>Index</i>	323
