

Index

A

adapted function, 54
 asymptotic series, *see* pseudodifferential operator

B

backward variable, 2
 backwards connected path, *see* minimum principle
 Bessel operator, 171

C

chaining argument, 103
 Chapman–Kolmogorov equation, 1, 72
 convergence
 in $C(\mathbb{R}^M; \mathbf{M}_1(\mathbb{R}^N))$, 6
 in $C_b(\mathbb{R}^N; \mathbb{C})$, 5
 coupling of measures, 13

D

De,Georgi–Moser Harnack’s principle, 136
 diffusion coefficient, 4, 104
 divergence form, 82
 drift coefficient, 4, 104
 Duhamel’s formula, 121

E

elliptic estimate, 185
 elliptic operator, 185
 ellipticity, 27
 uniformly, 57
 ergodicity
 for compact manifolds, 164
 local, 92
 existence-uniqueness duality, 29
 exponential map, 152

F

forward variable, 2
 fundamental solution, 72
 backward equation, 72
 Chapman–Kolmogorov equation for, 72
 forward equation, 74
 Gaussian lower bound, 98, 104, 114
 Gaussian upper bound, 90, 104, 108
 local Gaussian lower bound, 125, 129
 local regularity, 122
 on a manifold
 Gaussian bounds, 156
 regularity, 154
 regularity, 74

H

Hölder conjugate, 65
 Hörmander’s condition, 189
 Hörmander’s Theorem, 189
 parabolic, 202
 transition probability function, 203
 harmonic measure, 136
 Harnack’s principle of De,Georgi–Moser, 136
 homogeneous pseudodifferential operator, 175
 hypoellipticity
 second order elliptic, 77
 hypoelliptic, 77
 hypoellipticity
 Hörmander’s Theorem, 189
 implied by ellipticity, 187
 non-degenerate parabolic, 78

I

infinitely divisible flow, 7
 interior estimates, 121
 interpolation, 76

214

K

- Kolmogorov's backward equation, 28
 - existence of solutions, 47
 - fundamental solution, 72
 - regularity of solutions, 38, 61
 - uniqueness of solutions, 31
- Kolmogorov's forward equation, 1, 2
 - derivation, 2
 - existence, 4
 - uniqueness, 32, 39, 48

L

- Lévy's Continuity Theorem, 5
- Lie algebra of vector fields, 189
- Liouville Theorem, 135
- local operator, 2
- lower triangular system, 22

M

- marginal distributions, 13
- Markov semigroup, 48
- martingale problem, 117
 - on a manifold
 - existence of solutions, 143
 - uniqueness of solutions, 149
- mean value property, 132
- minimum principle, 2
 - strong, 133
 - weak, 43, 130

N

- Nash's Continuity Theorem, 134

O

- order of an operator, 172
 - $-\infty$, 172
 - true, 172
- oscillation
 - Lemma, 134
 - of a function, 133

P

- Poincaré inequality
 - for a compact manifold, 165
 - for Gauss measure, 92
- potential, 19
- progressively measurable, 142

Index

- pseudodifferential operator, 184
 - asymptotic series for, 184
 - homogeneous, 175
 - quasilocality of, 177

Q

- quasilocal operator, 177

R

- rapidly decreasing function, 169
- reflection principle, 120
- regular conditional distribution, 147
- Riemannian distance, 89
- Riemannian volume measure, 151

S

- scaling, 71
- Schwartz's test function space, 169
- semigroup, 48
 - adjoint, 49
 - Markov, 48
 - property, 48
- slowly increasing, 18
 - uniformly, 18
- Sobolev Embedding Theorem, 170
- Sobolev space, 170
- strong minimum principle, 133
- subelliptic estimate, 190
 - Hörmander, 201
- symbol
 - of a homogeneous pseudodifferential operator, 175
- symbol of an operator, 173
- symbol of order 0, 173

T

- tempered distribution, 170
- tempered function, 170
- transition probability function, 1
 - adjoint, 49
 - Chapman–Kolmogorov equation for, 1
 - density, *see* fundamental solution
 - estimates, 19
 - existence, 12
 - Hörmander's Theorem, 203
 - on a manifold, 149
 - density
 - on a manifold, *see* fundamental solution
