<i>Preface</i>	<i>page vii</i>
1 Galois theory of fields	1
1.1 Algebraic field extensions	1
1.2 Galois extensions	4
1.3 Infinite Galois extensions	9
1.4 Interlude on category theory	15
1.5 Finite étale algebras	20
2 Fundamental groups in topology	27
2.1 Covers	27
2.2 Galois covers	30
2.3 The monodromy action	34
2.4 The universal cover	39
2.5 Locally constant sheaves and their classification	45
2.6 Local systems	51
2.7 The Riemann–Hilbert correspondence	54
3 Riemann surfaces	65
3.1 Basic concepts	65
3.2 Local structure of holomorphic maps	67
3.3 Relation with field theory	72
3.4 The absolute Galois group of $\mathbf{C}(t)$	78
3.5 An alternate approach: patching Galois covers	83
3.6 Topology of Riemann surfaces	86
4 Fundamental groups of algebraic curves	93
4.1 Background in commutative algebra	93
4.2 Curves over an algebraically closed field	99
4.3 Affine curves over a general base field	105
4.4 Proper normal curves	110
4.5 Finite branched covers of normal curves	114
4.6 The algebraic fundamental group	119
4.7 The outer Galois action	123
4.8 Application to the inverse Galois problem	129
4.9 A survey of advanced results	134

5	Fundamental groups of schemes	142
5.1	The vocabulary of schemes	142
5.2	Finite étale covers of schemes	152
5.3	Galois theory for finite étale covers	159
5.4	The algebraic fundamental group in the general case	166
5.5	First properties of the fundamental group	170
5.6	The homotopy exact sequence and applications	175
5.7	Structure theorems for the fundamental group	182
5.8	The abelianized fundamental group	193
6	Tannakian fundamental groups	206
6.1	Affine group schemes and Hopf algebras	206
6.2	Categories of comodules	214
6.3	Tensor categories and the Tannaka–Krein theorem	222
6.4	Second interlude on category theory	228
6.5	Neutral Tannakian categories	232
6.6	Differential Galois groups	242
6.7	Nori’s fundamental group scheme	248
	<i>Bibliography</i>	261
	<i>Index</i>	268
