Preface *page* xi
Notation xii

1 Introduction **1**
1.1 Observers and physical measurements 1
1.2 Interpretation of physical measurements 2
1.3 Clock synchronization and relativity of time 2

2 The theory of relativity: a mathematical overview **11**
2.1 The space-time 11
2.2 Derivatives on a manifold 17
2.3 Killing symmetries 27
2.4 Petrov classification 28
2.5 Einstein's equations 28
2.6 Exact solutions 29

3 Space-time splitting **34**
3.1 Orthogonal decompositions 34
3.2 Three-dimensional notation 39
3.3 Kinematics of the observer's congruence 41
3.4 Adapted frames 41
3.5 Comparing families of observers 48
3.6 Splitting of derivatives along a time-like curve 53

4 Special frames **59**
4.1 Orthonormal frames 59
4.2 Null frames 69

5 The world function **74**
5.1 The connector 75
5.2 Mathematical properties of the world function 77
5.3 The world function in Fermi coordinates 80
5.4 The world function in de Sitter space-time 82
5.5 The world function in Gödel space-time 84
5.6 The world function of a weak gravitational wave 87

Table of Contents
More information

5.7 Applications of the world function: GPS or emission coordinates 88

6 Local measurements 91
6.1 Measurements of time intervals and space distances 91
6.2 Measurements of angles 95
6.3 Measurements of spatial velocities 96
6.4 Composition of velocities 97
6.5 Measurements of energy and momentum 99
6.6 Measurements of frequencies 99
6.7 Measurements of acceleration 102
6.8 Acceleration change under observer transformations 108
6.9 Kinematical tensor change under observer transformations 108
6.10 Measurements of electric and magnetic fields 111
6.11 Local properties of an electromagnetic field 113
6.12 Time-plus-space $(1+3)$ form of Maxwell's equations 115
6.13 Gravitoelectromagnetism 115
6.14 Physical properties of fluids 116

7 Non-local measurements 126
7.1 Measurement of the space-time curvature 126
7.2 Vacuum Einstein's equations in 1+3 form 129
7.3 Divergence of the Weyl tensor in 1+3 form 130
7.4 Electric and magnetic parts of the Weyl tensor 131
7.5 The Bel-Robinson tensor 132
7.6 Measurement of the electric part of the Riemann tensor 135
7.7 Measurement of the magnetic part of the Riemann tensor 141
7.8 Curvature contributions to spatial velocity 143
7.9 Curvature contributions to the measurements of angles 149

8 Observers in physically relevant space-times 152
8.1 Schwarzschild space-time 152
8.2 Special observers in Schwarzschild space-time 156
8.3 Kerr space-time 165
8.4 Special observers in Kerr space-time 169
8.5 Gravitational plane-wave space-time 184

9 Measurements in physically relevant space-times 186
9.1 Measurements in Schwarzschild space-time 186
9.2 The problem of space navigation 194
9.3 Measurements in Kerr space-time 199
9.4 Relativistic thrust anomaly 206
9.5 Measurements of black-hole parameters 212

Table of Contents
More information

9.6 Gravitationally induced time delay 215
9.7 Ray-tracing in Kerr space-time 218
9.8 High-precision astrometry 225

10 Measurements of spinning bodies 231
10.1 Behavior of spin in general space-times 231
10.2 Motion of a test gyroscope in a weak gravitational field 237
10.3 Motion of a test gyroscope in Schwarzschild space-time 239
10.4 Motion of a spinning body in Schwarzschild space-time 241
10.5 Motion of a test gyroscope in Kerr space-time 247
10.6 Motion of a spinning body in Kerr space-time 248
10.7 Gravitational waves and the compass of inertia 255
10.8 Motion of an extended body in a gravitational wave space-time 261

Epilogue 265
Exercises 267
