Contents

Foreword by James Gustave Speth  
Preface  

Part I  Framework and fundamentals  
1 Overview and summary  
1.1 Outline of the book  
1.2 Rationale and motivations  
1.3 Brief history and summary of sustainomics  
1.4 Millennium development prospects and worldwide status  
2 Sustainomics framework  
2.1 Basic concepts and principles  
2.2 Key elements of the sustainable development triangle  
2.3 Integration of economic, social and environmental elements  
2.4 Tools and methods for integrated analysis and assessment  
2.5 Restructuring development and growth for greater sustainability  
3 Economics of the environment  
3.1 Human activities and the environment  
3.2 Conventional project evaluation  
3.3 Measuring costs and benefits  
3.4 Basic concepts for valuing environmental costs and benefits  
3.5 Multicriteria analysis  
3.6 Discount rate, risk and uncertainty  
3.7 Economy-wide policies and the environment  
3.8 Appendix: Estimating and using shadow prices  
4 Ecological and social aspects  
4.1 Conceptual framework linking ecological and socioeconomic systems  
4.2 Property rights, governance and ecological–social linkages  
4.3 Environmental and social assessment
## Part II Global and transnational applications

1. **Global analytical applications**
   - 5.1 Climate change and sustainable development 137
   - 5.2 Applying the sustainomics framework to climate change 140
   - 5.3 Climate-change adaptation and mitigation 150
   - 5.4 Global-level interactions between climate change and sustainable development 154
   - 5.5 Greenhouse-gas-mitigation prospects in Sri Lanka 159
   - 5.6 Real-options framework for carbon trading under uncertainty 173

2. **International process applications: multilevel, multistakeholder, transdisciplinary dialogues**
   - 6.1 Global transdisciplinary scientific dialogue on climate change and sustainable development 180
   - 6.2 Multilevel integration of millennium ecosystem assessment results and millennium development goals 184
   - 6.3 Using the AIM to analyse MA–MDG links at the national and global levels 189
   - 6.4 Dams and development: multilevel, multistakeholder dialogue 193
   - 6.6 Dams and Development Project evaluation, conclusions and results 200

## Part III National and macroeconomic applications

1. **National economy-wide applications**
   - 7.1 Historical evolution of ideas 212
   - 7.2 Empirical evidence 215
   - 7.3 Framework for analysis 219
   - 7.4 Case study of Brazil – making long-term development more sustainable 225

2. **Mathematical macromodel applications**
   - 8.1 Optimal growth models and sustainable development 243
   - 8.2 Economic and non-economic costs and benefits of growth 244
   - 8.3 An optimization model: Ecol-Opt-Growth-1 246
   - 8.4 Ecol-Opt-Growth-1 model conclusions 253
   - 8.5 Macroeconomic policies, second-best theory and environmental harm 254
   - 8.6 Developing country case studies 256
   - 8.7 Appendix A: The Ecol-Opt-Growth-1 model 260
   - 8.8 Appendix B: Second-best nature of macroeconomic policies when environmental externalities are present 265
### Contents

9 Computable general equilibrium modelling applications 269  
9.1 Economy-wide cross-effects of social and environmental policies in Chile 269  
9.2 Review of economic, social and environmental issues and policies 272  
9.3 Interactions between social, environmental and economic policies 280  
9.4 Chile case study conclusions 288  
9.5 Economy-wide policies and deforestation in Costa Rica 289  
9.6 Modelling approach 292  
9.7 Main findings of the Costa Rica study 299  
9.8 Appendix A: ECOGEM–Chile CGE model summary 303  
9.9 Appendix B: Costa Rica CGE model summary 306

#### Part IV Sub-national sectoral and system applications

10 Energy-sector applications 313  
10.1 Energy and sustainable development 313  
10.2 Framework for sustainable energy development 321  
10.3 Applying SED to power planning in Sri Lanka 333  
10.4 Energy policy options 338  
10.5 Assessing the sustainability of energy policies in South Africa 343  
10.6 Making electricity development more sustainable in the UK 350  

11 Transport-sector applications 355  
11.1 Generic priorities for sustainable transport 355  
11.2 Health-damage costs of air pollution in Sri Lanka 357  
11.3 Traffic congestion – economic and environmental sustainability 364  
11.4 Other options for reducing traffic congestion 377  
11.5 Sustainable transport policy in Sri Lanka 385  

12 Water-resource applications 391  
12.1 Hydrological cycle and human actions 391  
12.2 Water and development 395  
12.3 Sustainable water-resources management and policy (SWAMP) 402  
12.4 Management of groundwater depletion and saline intrusion in the Philippines 406  
12.5 Policy implementation issues 413  
12.6 Simple water filtration method for cholera prevention in Bangladesh 416  
12.7 Appendix: Economic costs of producing water 420

13 Ecological and agricultural system applications 424  
13.1 Sustainable management of tropical forests 424  
13.2 Valuing forest ecosystems in Madagascar 434  
13.3 Agriculture and climate change 441
