1 Introduction	1
1.1 What Is Kinetic Theory?	1
1.2 The Kinetic Theory of Gases	2
1.3 Further Applications of Kinetic Theory	12
1.4 Outline of This Book	15
2 The Boltzmann Equation 1: Fundamentals	19
2.1 The Boltzmann Equation	19
2.2 The <i>H</i> -theorem of Boltzmann	40
2.3 The Objections of Zermelo and of Loschmidt	50
2.4 The Kac Ring Model	53
3 The Boltzmann Equation 2: Fluid Dynamics	60
3.1 The Chapman–Enskog Solution	61
3.2 General Properties of the Chapman–Enskog Solution	71
3.3 Solving the Boltzmann Equation for the Hydrodynamic Regime	72
3.4 The Distribution Function to First Order in μ :	
The Navier–Stokes Equations	77
3.5 The Rate of Entropy Production	88
3.6 Boundary Conditions on the Hydrodynamic Densities	91
3.7 Comparison of the Results of the Normal Solution	
Method with Experiment	95
3.8 Projection Operator Methods for the Linearized Boltzmann Equation	99
	vii

3.9	Other Solutions of the Boltzmann Equation and Models for the Collision Operator	110
3.10	Moment Expansions and Variational Methods for the Boltzmann Equation	112
3.11	Model Boltzmann Collision Operators	114
3.12	Other Models	119
4	Transport in Dilute Gas Mixtures	123
4.1	Introduction	123
4.2	The Boltzmann Equation for Dilute Gas Mixtures	124
4.3	The Chapman–Enskog Solution	126
4.4	Transport Coefficients for Binary Mixtures	144
4.5	The Rate of Entropy Production	146
5	The Dilute Lorentz Gas	149
5.1	Introduction	149
5.2	The Lorentz–Boltzmann Equation	151
5.3	Diffusion in the Lorentz Gas	155
5.4	Hard-Sphere Systems in Three Dimensions	159
5.5	Lorentz Gas in External Fields	164
5.6	Transport of Particles in a Uniform Magnetic Field	171
5.7	Chaos in the Lorentz Gas	180
6	Basic Tools of Nonequilibrium Statistical Mechanics	205
6.1	The Liouville Equation	206
6.2	Time-Displacement Operators	207
6.3	Hard-Sphere Systems: The Pseudo-Liouville Equation	214
6.4	The Pseudo-Liouville Equations and the Streaming Operators for N -particle Hard Sphere Systems	224
6.5	The BBGKY Hierarchy Equations	229
6.6	Extensions to More General Potentials	233
6.7	Important Relations and Identities Satisfied by $T_{\pm}$ and $\bar{T}_{\pm}$	235
6.8	Proof That the Binary Collision Expansions Provide a Correct Representation of the Dynamics of N Hard-Sphere Particles	239
6.9	The Green–Kubo Formulae	242
7	Enskog Theory: Dense Hard-Sphere Systems	255
7.1	Introduction	255
7.2	The Enskog Truncation of the BBGKY Hierarchy	256
7.3	The Revised Enskog Equation	260
7.4	The H -theorem for the Revised Enskog Equation	264
7.5	The Linearized Equation and Spatiotemporal Fluctuations	271

Contents

ix

7.6	The Revised Enskog Equation for Mixtures and the Onsager Reciprocal Relations	290
7.7	Enskog Theory of Transport in a Hard-Sphere Crystal	303
7.8	The Two-Particle Distribution Function in Equilibrium	310
7.9	Enskog Values for Transport Coefficients in Two and Three Dimensions	313
8	The Boltzmann–Langevin Equation	317
8.1	Introduction	317
8.2	The Boltzmann–Langevin Equation	318
8.3	Linear Hydrodynamic Equations with Fluctuations	324
8.4	Detection of Fluctuations about Equilibrium and Nonequilibrium Stationary States by Light Scattering	331
8.5	Fluctuations in Nonequilibrium Steady States	338
8.6	Puzzles	347
8.7	Other Approaches to the Linearized Boltzmann Equation with Fluctuations	349
9	Granular Gases	351
9.1	Introduction to Granular Gases	351
9.2	Inelastic Collisions	352
9.3	The Boltzmann Equation	354
9.4	The Homogeneous Cooling State	357
9.5	Driven Systems	377
9.6	Planetary Rings	382
10	Quantum Gases	387
10.1	Introduction	387
10.2	Density Matrices and the Wigner Function	389
10.3	The Uehling–Uhlenbeck Equation	391
10.4	Transport in a Condensed, Dilute Bose Gas	398
10.5	The Spatially Inhomogeneous Bose Gas at Low Temperatures	416
10.6	The Two-Fluid Hydrodynamic Equations for the Very-Low-Temperature Region	422
11	Cluster Expansions	437
11.1	Introduction	437
11.2	Generalizing the Boltzmann Equation	441
11.3	Difficulties in the Collision Operators	463

x	<i>Contents</i>	
12	Divergences, Resummations, and Logarithms	467
12.1	Singular Terms, for Long Times, in the Virial Expansions of the Collision Operator	467
12.2	Divergences in the Nonequilibrium Virial Expansion	469
12.3	Ring Kinetic Equations	476
12.4	Applications to Green–Kubo Correlation Functions	486
12.5	Logarithms in the Density Expansions of Transport Coefficients	490
12.6	The Diffusion Coefficients for the Classical and Quantum Lorentz Gases	499
12.7	Final Remarks	503
13	Long-Time Tails	507
13.1	Introduction	508
13.2	Mode-Coupling Contributions to $U_{ij}(k, z)$ and to Transport Coefficients	509
13.3	Implications and Experimental Consequences of the Long-Time Tails	526
13.4	Conclusion	539
14	Transport in Nonequilibrium Steady States	541
14.1	Introduction	541
14.2	Ring Kinetic Equations for Stationary Nonequilibrium Gases	545
14.3	Stationary-State Couette Flow	549
14.4	Stationary-State Heat Flow	558
14.5	Nonequilibrium Is Different	569
15	What's Next	577
15.1	Where Are We?	577
15.2	Kinetic Theory of Gas Flows and of Brownian Motion	581
15.3	Other Applications of Kinetic Theory	583
15.4	A Common Theme	587
	<i>Bibliography</i>	589
	<i>Index</i>	620
