<i>Preface</i>	<i>page</i> ix
1 What is nonlinear Perron–Frobenius theory?	1
1.1 Classical Perron–Frobenius theory	1
1.2 Cones and partial orderings	7
1.3 Order-preserving maps	11
1.4 Subhomogeneous maps	13
1.5 Topical maps	17
1.6 Integral-preserving maps	23
2 Non-expansiveness and nonlinear Perron–Frobenius theory	26
2.1 Hilbert’s and Thompson’s metrics	26
2.2 Polyhedral cones	34
2.3 Lorentz cones	38
2.4 The cone of positive-semidefinite symmetric matrices	43
2.5 Completeness	45
2.6 Convexity and geodesics	48
2.7 Topical maps and the sup-norm	55
2.8 Integral-preserving maps and the ℓ_1 -norm	56
3 Dynamics of non-expansive maps	58
3.1 Basic properties of non-expansive maps	58
3.2 Fixed-point theorems for non-expansive maps	67
3.3 Horofunctions and horoballs	70
3.4 A Denjoy–Wolff type theorem	74
3.5 Non-expansive retractions	77
4 Sup-norm non-expansive maps	81
4.1 The size of the ω -limit sets	81

vi	<i>Contents</i>	
	4.2 Periods of periodic points	85
	4.3 Iterates of topical maps	90
	5 Eigenvectors and eigenvalues of nonlinear cone maps	96
	5.1 Extensions of order-preserving maps	96
	5.2 The cone spectrum	100
	5.3 The cone spectral radius	106
	5.4 Eigenvectors corresponding to the cone spectral radius	112
	5.5 Continuity of the cone spectral radius	115
	5.6 A Collatz–Wielandt formula	118
	6 Eigenvectors in the interior of the cone	120
	6.1 First principles	120
	6.2 Perturbation method	127
	6.3 Bounded invariant sets	134
	6.4 Uniqueness of the eigenvector	137
	6.5 Convergence to a unique eigenvector	146
	6.6 Means and their eigenvectors	154
	7 Applications to matrix scaling problems	161
	7.1 Matrix scaling: a fixed-point approach	161
	7.2 The compatibility condition	166
	7.3 Special <i>DAD</i> theorems	173
	7.4 Doubly stochastic matrices: the classic case	176
	7.5 Scaling to row stochastic matrices	180
	8 Dynamics of subhomogeneous maps	183
	8.1 Iterations on polyhedral cones	183
	8.2 Periodic orbits in polyhedral cones	188
	8.3 Denjoy–Wolff theorems for cone maps	196
	8.4 A Denjoy–Wolff theorem for polyhedral cones	204
	9 Dynamics of integral-preserving maps	212
	9.1 Lattice homomorphisms	212
	9.2 Periodic orbits of lower semi-lattice homomorphisms	217
	9.3 Periodic points and admissible arrays	225
	9.4 Computing periods of admissible arrays	241
	9.5 Maps on the whole space	248
	Appendix A The Birkhoff–Hopf theorem	255
	A.1 Preliminaries	255
	A.2 Almost Archimedean cones	258
	A.3 Projective diameter	259
	A.4 The Birkhoff–Hopf theorem: reduction to two dimensions	263

Contents vii

A.5 Two-dimensional cones	269
A.6 Completion of the proof of the Birkhoff–Hopf theorem	273
A.7 Eigenvectors of cone-linear maps	279
Appendix B Classical Perron–Frobenius theory	284
B.1 A general version of Perron’s theorem	284
B.2 The finite-dimensional Kreĭn–Rutman theorem	289
B.3 Irreducible linear maps	290
B.4 The peripheral spectrum	291
<i>Notes and comments</i>	300
<i>References</i>	307
