<i>Preface</i>	<i>page xiii</i>
PART I PRELIMINARIES	1
1 Vector Spaces and Bases	3
1.1 Definition of a Vector Space	3
1.2 Examples of Vector Spaces	4
1.3 Linear Subspaces	6
1.4 Spanning Sets, Linear Independence, and Bases	7
1.5 Linear Maps between Vector Spaces and Their Inverses	10
1.6 Existence of Bases and Zorn's Lemma	13
Exercises	15
2 Metric Spaces	17
2.1 Metric Spaces	17
2.2 Open and Closed Sets	19
2.3 Continuity and Sequential Continuity	22
2.4 Interior, Closure, Density, and Separability	23
2.5 Compactness	25
Exercises	30
PART II NORMED LINEAR SPACES	33
3 Norms and Normed Spaces	35
3.1 Norms	35
3.2 Examples of Normed Spaces	38
3.3 Convergence in Normed Spaces	42
3.4 Equivalent Norms	43
3.5 Isomorphisms between Normed Spaces	46
3.6 Separability of Normed Spaces	48
Exercises	50

4	Complete Normed Spaces	53
4.1	Banach Spaces	53
4.2	Examples of Banach Spaces	56
4.2.1	Sequence Spaces	57
4.2.2	Spaces of Functions	58
4.3	Sequences in Banach Spaces	61
4.4	The Contraction Mapping Theorem	63
	Exercises	64
5	Finite-Dimensional Normed Spaces	66
5.1	Equivalence of Norms on Finite-Dimensional Spaces	66
5.2	Compactness of the Closed Unit Ball	68
	Exercises	70
6	Spaces of Continuous Functions	71
6.1	The Weierstrass Approximation Theorem	71
6.2	The Stone–Weierstrass Theorem	77
6.3	The Arzelà–Ascoli Theorem	83
	Exercises	86
7	Completions and the Lebesgue Spaces $L^p(\Omega)$	89
7.1	Non-completeness of $C([0, 1])$ with the L^1 Norm	89
7.2	The Completion of a Normed Space	91
7.3	Definition of the L^p Spaces as Completions	94
	Exercises	97
	PART III HILBERT SPACES	99
8	Hilbert Spaces	101
8.1	Inner Products	101
8.2	The Cauchy–Schwarz Inequality	103
8.3	Properties of the Induced Norms	105
8.4	Hilbert Spaces	107
	Exercises	108
9	Orthonormal Sets and Orthonormal Bases for Hilbert Spaces	110
9.1	Schauder Bases in Normed Spaces	110
9.2	Orthonormal Sets	112
9.3	Convergence of Orthogonal Series	115
9.4	Orthonormal Bases for Hilbert Spaces	117
9.5	Separable Hilbert Spaces	122
	Exercises	123

10	Closest Points and Approximation	126
	10.1 Closest Points in Convex Subsets of Hilbert Spaces	126
	10.2 Linear Subspaces and Orthogonal Complements	129
	10.3 Best Approximations	131
	Exercises	134
11	Linear Maps between Normed Spaces	137
	11.1 Bounded Linear Maps	137
	11.2 Some Examples of Bounded Linear Maps	141
	11.3 Completeness of $B(X, Y)$ When Y Is Complete	145
	11.4 Kernel and Range	146
	11.5 Inverses and Invertibility	147
	Exercises	150
12	Dual Spaces and the Riesz Representation Theorem	153
	12.1 The Dual Space	153
	12.2 The Riesz Representation Theorem	155
	Exercises	157
13	The Hilbert Adjoint of a Linear Operator	159
	13.1 Existence of the Hilbert Adjoint	159
	13.2 Some Examples of the Hilbert Adjoint	162
	Exercises	164
14	The Spectrum of a Bounded Linear Operator	165
	14.1 The Resolvent and Spectrum	165
	14.2 The Spectral Mapping Theorem for Polynomials	169
	Exercises	171
15	Compact Linear Operators	173
	15.1 Compact Operators	173
	15.2 Examples of Compact Operators	175
	15.3 Two Results for Compact Operators	177
	Exercises	178
16	The Hilbert–Schmidt Theorem	180
	16.1 Eigenvalues of Self-Adjoint Operators	180
	16.2 Eigenvalues of Compact Self-Adjoint Operators	182
	16.3 The Hilbert–Schmidt Theorem	184
	Exercises	188
17	Application: Sturm–Liouville Problems	190
	17.1 Symmetry of L and the Wronskian	191

17.2	The Green's Function	193
17.3	Eigenvalues of the Sturm–Liouville Problem	195
PART IV BANACH SPACES		199
18	Dual Spaces of Banach Spaces	201
18.1	The Young and Hölder Inequalities	202
18.2	The Dual Spaces of ℓ^p	204
18.3	Dual Spaces of $L^p(\Omega)$	207
	Exercises	208
19	The Hahn–Banach Theorem	210
19.1	The Hahn–Banach Theorem: Real Case	210
19.2	The Hahn–Banach Theorem: Complex Case	214
	Exercises	217
20	Some Applications of the Hahn–Banach Theorem	219
20.1	Existence of a Support Functional	219
20.2	The Distance Functional	220
20.3	Separability of X^* Implies Separability of X	221
20.4	Adjoints of Linear Maps between Banach Spaces	222
20.5	Generalised Banach Limits	224
	Exercises	226
21	Convex Subsets of Banach Spaces	228
21.1	The Minkowski Functional	228
21.2	Separating Convex Sets	230
21.3	Linear Functionals and Hyperplanes	233
21.4	Characterisation of Closed Convex Sets	234
21.5	The Convex Hull	235
21.6	The Krein–Milman Theorem	236
	Exercises	239
22	The Principle of Uniform Boundedness	240
22.1	The Baire Category Theorem	240
22.2	The Principle of Uniform Boundedness	242
22.3	Fourier Series of Continuous Functions	244
	Exercises	247
23	The Open Mapping, Inverse Mapping, and Closed Graph Theorems	249
23.1	The Open Mapping and Inverse Mapping Theorems	249
23.2	Schauder Bases in Separable Banach Spaces	252

<i>Contents</i>		xi
23.3	The Closed Graph Theorem	255
	Exercises	256
24	Spectral Theory for Compact Operators	258
24.1	Properties of $T - I$ When T Is Compact	258
24.2	Properties of Eigenvalues	262
25	Unbounded Operators on Hilbert Spaces	264
25.1	Adjoins of Unbounded Operators	265
25.2	Closed Operators and the Closure of Symmetric Operators	267
25.3	The Spectrum of Closed Unbounded Self-Adjoint Operators	269
26	Reflexive Spaces	273
26.1	The Second Dual	273
26.2	Some Examples of Reflexive Spaces	275
26.3	X Is Reflexive If and Only If X^* Is Reflexive	277
	Exercises	280
27	Weak and Weak-* Convergence	282
27.1	Weak Convergence	282
27.2	Examples of Weak Convergence in Various Spaces	285
	27.2.1 Weak Convergence in ℓ^p , $1 < p < \infty$	285
	27.2.2 Weak Convergence in ℓ^1 : Schur's Theorem	286
	27.2.3 Weak versus Pointwise Convergence in $C([0, 1])$	288
27.3	Weak Closures	289
27.4	Weak-* Convergence	290
27.5	Two Weak-Compactness Theorems	292
	Exercises	295
	APPENDICES	299
<i>Appendix A</i>	Zorn's Lemma	301
<i>Appendix B</i>	Lebesgue Integration	305
<i>Appendix C</i>	The Banach–Alaoglu Theorem	319
	<i>Solutions to Exercises</i>	331
	<i>References</i>	394
	<i>Index</i>	396
