Abstract: This Element presents science-engaged theology as a reminder to theologians to use the local tools and products of the sciences as sources for theological reflection. Using critiques of modernity and secularism, the Element questions the idea that Science and Religion were ever transhistorical categories. The Element also encourages theologians to collaborate with colleagues in other disciplines in a highly localized manner that enables theologians to make concrete claims with accountability and show how theological realities are entangled with the empirical world. This title is also available as Open Access on Cambridge Core.

Keywords: science and religion, queen of the sciences, theological sources, natural theology, interdisciplinary
