Abstract: This Element goes far beyond economic theory. It will be of interest to representatives of the environmental sciences due to its focus on the 'green' economy and sustainable development. It will also be appealing to representatives of the social sciences, as it takes into account the peculiarities of emerging market economies. Learning from the COVID-19 pandemic and crisis makes this Element interesting from a health economics perspective.

Keywords: green economy, sustainable development, emerging market economies, COVID-19, crisis management
