Introduction *page* xi

1 Main Limit Laws in the Normal Deviation Zone 1

1.1 Preliminary Results 1

1.1.1 Convergence of Distributions and Moments of Some Functionals of CPRs 1

1.1.2 CRPs with Stationary Increments 5

1.1.3 Strong Law of Large Numbers for a Simple Renewal Process $\eta(t)$ 7

1.1.4 Almost Sure Convergence of Some Functionals of CRPs 7

1.2 First Moments of the Processes $Z(t)$ and $Y(t)$. Strong Laws of Large Numbers 10

1.2.1 Asymptotics for First- and Second-Order Moments of $Z(t)$ and $Y(t)$ 10

1.2.2 Strong Laws of Large Numbers 13

1.3 Central Limit Theorem and the Law of the Iterated Logarithm 13

1.3.1 Anscombe's Theorem 13

1.3.2 Central Limit Theorem 14

1.3.3 Law of the Iterated Logarithm 16

1.4 Convergence to a Stable Law. Analog of the Law of the Iterated Logarithm 17

1.4.1 Convergence to a Stable Law 17

1.4.2 Analog of the Law of the Iterated Logarithm 19

1.5 Invariance Principle 21

1.5.1 Introduction 21

1.5.2 Analog of Anscombe's Theorem in the Case of Convergence to a Continuous Process 22

1.5.3 Invariance Principle for Compound Renewal Processes 24

Table of Contents
More Information

1.6 Convergence of Normalized Compound Renewal Processes to Stable Processes in the Case when ξ has Infinite Variance 28
1.6.1 S-Convergence to Stable Processes 28
1.6.2 Absence of S-Convergence without Condition (1.6.5) 32
1.6.3 $\mathbb{D}$-Convergence to Stable Processes 33
1.7 Limit Theorems for the First Passage Time of an Arbitrary Boundary by a Compound Renewal Process 38
1.7.1 Introduction 38
1.7.2 Case of Finite Variance 39
1.7.3 Case of Infinite Variance 44
1.8 Main Limit Laws for Markov Additive Processes (for Sums of Random Variables Defined on States of a Markov Chain) 49
1.8.1 Ergodic Theorems for Harris Markov Chains 49
1.8.2 Markov Additive Process 51
1.8.3 Main Limit Laws for Markov Additive Processes 53

2 Integro-Local Limit Theorems in the Normal Deviation Zone 57
2.1 Integro-Local Limit Theorems in the Case of Independent or Linearly Dependent τ and ζ 57
2.1.1 Integro-Local Theorem for Random Walks 58
2.1.2 Integro-Local Theorems for Homogeneous CRPs in the Case of Independent or Linearly Dependent τ and ζ 60
2.2 Refinement of Stone's Integro-Local Theorem for Random Walks 67
2.3 Integro-Local Theorems for Compound Renewal Processes in the General Case 74
2.4 Extension of Results to the Inhomogeneous Case 84
2.5 Integro-Local Theorems for Markov Additive Processes 87

3 Large Deviation Principles for Compound Renewal Processes 90
3.1 Introduction 90
3.2 Relationship between Compound Renewal Processes and the Renewal Measure. Deviation Function for the Renewal Measure 93
3.2.1 Renewal Measures and CRPs 93
3.2.2 Asymptotics for the Renewal Measure and the Corresponding Deviation Function 95
3.2.3 Preliminary Version of the Local LDP for CRPs 98
3.3 Deviation Functions for the Renewal Measure and for Compound Renewal Processes 99
3.3.1 Properties of the Function $\mathbf{D}(t, \alpha)$ and of the Deviation Functions for CRPs 99
3.4 Large Deviation Principles for $Z(T)$ 105
3.4.1 The General Case 105

Table of Contents
More Information

3.4.2 Homogeneous Processes and Processes with Stationary Increments 109
3.4.3 LDP for the Process $(Z(t), \gamma(t))$ and Its Consequences 111
3.5 Fundamental Functions and Their Properties. Further Properties of the Deviation Function $D(\alpha)$, $\widehat{D}(\alpha)$. On the Condition $\lambda_+ < D(0)$ 112
3.5.1 Fundamental Functions and Their Properties. Further Properties of the Function $D(\alpha)$ 112
3.5.2 Properties of the Functions $\mu(\alpha)$ and $\mu(\alpha)$ 124
3.5.3 Properties of the Deviation Function in Its General Form and of the Corresponding Fundamental Function 130
3.5.4 Condition $\lambda_+ < D(\alpha)$ and Strong Dependence between τ and ζ in the Large Deviation Zone 135
3.5.5 Examples 137
3.6 On Large Deviation Principles for the Process $Y(t)$ and for Markov Additive Processes 141
3.6.1 LDP for the Process $Y(t)$ on the Narrowing of the Set $\{Y(T) \in T\Delta[\alpha)\}$ 142
3.6.2 LDP for $Y(t)$ when τ and ζ Are Independent 144
3.6.3 On Large Deviation Principles for Markov Additive Processes 145
3.7 Rough Asymptotics for the Laplace Transform of the Distribution of a Compound Renewal Process 147

4 Large Deviation Principles for Trajectories of Compound Renewal Processes 154
4.1 Conditions for the Fulfillment of the LDP for the Increments of a Process and for Finite-Dimensional Distributions 154
4.1.1 LDP for Increments of a CRP 154
4.1.2 Proof of Lemma 4.1.5 161
4.2 First Partial Local Large Deviation Principles for the Trajectories of a Compound Renewal Process 163
4.2.1 Main Assertion and Its Proof 164
4.2.2 Proofs of Lemmas 4.2.2 and 4.2.4 170
4.3 Second Partial Local Large Deviation Principle 176
4.3.1 Main Results 176
4.3.2 On the Most Probable Trajectories 179
4.3.3 Auxiliary Assertions 181
4.3.4 Proof of Theorem 4.3.1 183
4.4 Complete Local Large Deviation Principle 186
4.5 Integral Large Deviation Principle for Trajectories of a Compound Renewal Process 189
4.5.1 Main Result and Its Proof 189

More Information

4.5.2 On the Relaxation of the Conditions of Theorem 4.5.1 196
4.6 Large Deviation Principles for the First Boundary Crossing Problem 197
4.6.1 Level Lines 198
4.6.2 Inequalities for the Distribution of the Maximum Value of a CRP 201
4.6.3 Large Deviation Principles for the First Boundary Crossing Problem 204
4.7 Large Deviation Principles for the Second Boundary Crossing Problem 208
4.7.1 Most Probable (Shortest) Trajectories 208
4.7.2 The Second Boundary Crossing Problem 211
4.8 Moderately Large Deviation Principles for Trajectories of Compound Renewal Processes 215
4.8.1 Main Results 215
4.8.2 Proofs 218
4.8.3 Rough (Logarithmic) Invariance Principle for CRPs in the Moderately Large Deviation Zone 224

5 Integro-Local Limit Theorems under the Cramér Moment Condition 225
5.1 Introduction 225
5.2 Main Results 226
5.2.1 Integro-Local Theorem for the Process $Z(t)$ 226
5.2.2 Integro-Local Theorem for the Process $Y(t)$ 231
5.2.3 Integro-Local Theorem for Finite-Dimensional Distributions of the Process $Z(t)$ 233
5.2.4 Normal and Moderately Large Deviations 235
5.3 Integro-Local Theorems for the Renewal Measure 237
5.4 Proof of Theorem 5.2.1 and Its Generalization 249
5.4.1 Proof of Theorem 5.2.1 249
5.4.2 Extension of Results to the Case when the Distribution of (τ_1, ζ_1) Depends on a Parameter 254
5.5 Proofs of Theorems 5.2.10–5.2.14 256
5.5.1 Proof of Theorem 5.2.10 256
5.5.2 Proof of Theorem 5.2.13 on Finite-Dimensional Distributions 262
5.5.3 Proof of Theorem 5.2.14 263
5.6 Exact Asymptotics of the Laplace Transform of the Distribution of a Compound Renewal Process and Related Problems 264
5.6.1 Main Result 264

More Information

5.6.2 Refinement of the Inequalities of Theorem 4.6.3 for the Distribution of $\overline{Z}(T)$ 267
5.6.3 Exact Asymptotics of the Moments of a CRP 269
5.7 Integro-Local Theorems for Markov Additive Processes under the Cramér Conditions 272

6 Exact Asymptotics in Boundary Crossing Problems for Compound Renewal Processes 275
6.1 Asymptotics of Distributions of the Maximal Value of a Compound Renewal Process with Linear Drift. First Passage Time of a High Level 275
6.1.1 Preliminaries 275
6.1.2 Distribution of the Maximal Value of a CRP with Drift 278
6.1.3 Distribution of the First Passage Time of a High Level 281
6.2 Limit Theorems under the Cramér Condition for the Conditional Distribution of Jumps when the Trajectory Has a Fixed End 287
6.2.1 Limit Conditional Distribution of Jumps 287
6.2.2 On the Distribution of the Vector ${}^{\alpha}\boldsymbol{\xi}$ 290
6.3 Integro-Local Theorems for the First Passage Time of a High Level by the Trajectory of a Compound Renewal Process 290
6.4 Integral Theorems for the Distribution of $\overline{Z}(T) = \max_{t \le T} Z(t)$ 295
6.4.1 The Case $a < 0$, $\alpha > 0$ 295
6.4.2 The Case $\alpha > a \ge 0$ 302
6.4.3 The Case $a > 0$, $\alpha \sim a$ as $T \to \infty$ 304
6.4.4 Asymptotics of the Probability that the Trajectory of a CRP Does Not Cross a High Level x for $\alpha = \frac{x}{T} < a$ 306
6.5 Integro-Local Theorems in Boundary Crossing Problems for Compound Renewal Processes 308
6.5.1 Integro-Local Theorems for the First Boundary Crossing Problem 308
6.5.2 Integro-Local Theorems for the Ruin Probability Problem 314
6.6 Integral Theorems in Boundary Crossing Problems 315
6.6.1 Integral Theorems in the First Boundary Crossing Problem 315
6.6.2 On the Second Boundary Crossing Problem 317
6.7 Applications to the Ruin Probability Problem for Insurance Companies 319

7 Extension of the Invariance Principle to the Zones of Moderately Large and Small Deviations 325
7.1 Strong Approximation of a CRP by a Wiener Process 325

More Information

7.2 Extension of the Invariance Principle to the Zone of Moderately Large Deviations 329
7.3 First Boundary Crossing Problem for Moderately Large Deviations 331
7.4 Extension of the Invariance Principle for Lipschitz Functionals to the Zone of Moderately Large Deviations 335
7.5 Extension of the Invariance Principle to the Zone of Moderately Small Deviations 336
7.5.1 Extension of the Invariance Principle for the First-Type Sets 336
7.5.2 Extension of the Invariance Principle to the Zone of Small Deviations for Second-Type Sets 337
7.5.3 Second Boundary Crossing Problem in the Small Deviation Zone 339

Appendix A **On Boundary Crossing Problems for Compound Renewal Processes when the Cramér Condition Is Not Fulfilled** 341
A.1 Distribution of the Maximal Value on the Whole Half-Axis of a Compound Renewal Process with Drift 341
A.1.1 Distribution of the Maximal Value of a Compound Renewal Process when the Cramér Condition Is Not Met 341
A.1.2 Second-Order Approximation for the Distribution of the Maximal Value of the CRP $Z^{(q)}(t)$ 343
A.1.3 Transient Phenomena for CRPs. First- and Second-Order Asymptotics 344
A.2 Asymptotics of the Distributions of $Z^0(T) = (Z(T) - aT)$ and $\overline{Z}^0(T) = \max_{t \le T} Z^0(t)$ when the Distributions of Jumps Are Regularly Varying 346
A.3 First Boundary Crossing Problem in the Case of Regular Variation of Jump Distributions 349
