<i>Preface</i>	<i>page</i> xiv
<i>Acknowledgments</i>	xx
<b>0 Introductory remarks</b>	1
0.1 Why $p$ -adic differential equations?	1
0.2 Zeta functions of varieties	3
0.3 Zeta functions and $p$ -adic differential equations	5
0.4 A word of caution	7
Notes	8
Exercises	9
<b>Part I Tools of <math>p</math>-adic Analysis</b>	
<b>1 Norms on algebraic structures</b>	13
1.1 Norms on abelian groups	13
1.2 Valuations and nonarchimedean norms	16
1.3 Norms on modules	17
1.4 Examples of nonarchimedean norms	26
1.5 Spherical completeness	28
Notes	32
Exercises	34
<b>2 Newton polygons</b>	36
2.1 Newton polygons	36
2.2 Slope factorizations and a master factorization theorem	39
2.3 Applications to nonarchimedean field theory	42
Notes	44
Exercises	45

<b>3</b>	<b>Ramification theory</b>	46
3.1	Defect	47
3.2	Unramified extensions	48
3.3	Tamely ramified extensions	50
3.4	The case of local fields	53
	Notes	54
	Exercises	55
<b>4</b>	<b>Matrix analysis</b>	56
4.1	Singular values and eigenvalues (archimedean case)	57
4.2	Perturbations (archimedean case)	61
4.3	Singular values and eigenvalues (nonarchimedean case)	63
4.4	Perturbations (nonarchimedean case)	68
4.5	Horn's inequalities	72
	Notes	73
	Exercises	75
 <b>Part II Differential Algebra</b>		
<b>5</b>	<b>Formalism of differential algebra</b>	79
5.1	Differential rings and differential modules	79
5.2	Differential modules and differential systems	82
5.3	Operations on differential modules	83
5.4	Cyclic vectors	87
5.5	Differential polynomials	88
5.6	Differential equations	90
5.7	Cyclic vectors: a mixed blessing	91
5.8	Taylor series	93
	Notes	94
	Exercises	95
<b>6</b>	<b>Metric properties of differential modules</b>	97
6.1	Spectral radii of bounded endomorphisms	97
6.2	Spectral radii of differential operators	99
6.3	A coordinate-free approach	106
6.4	Newton polygons for twisted polynomials	108
6.5	Twisted polynomials and spectral radii	109
6.6	The visible decomposition theorem	111
6.7	Matrices and the visible spectrum	113
6.8	A refined visible decomposition theorem	116
6.9	Changing the constant field	119

*Contents* vii

Notes	120
Exercises	121
<b>7 Regular and irregular singularities</b>	123
7.1 Irregularity	124
7.2 Exponents in the complex analytic setting	125
7.3 Formal solutions of regular differential equations	127
7.4 Index and irregularity	131
7.5 The Turrittin–Levelt–Hukuhara decomposition theorem	133
7.6 Asymptotic behavior	136
Notes	137
Exercises	139
<b>Part III p-adic Differential Equations on Discs and Annuli</b>	
<b>8 Rings of functions on discs and annuli</b>	143
8.1 Power series on closed discs and annuli	144
8.2 Gauss norms and Newton polygons	146
8.3 Factorization results	148
8.4 Open discs and annuli	151
8.5 Analytic elements	152
8.6 More approximation arguments	156
Notes	158
Exercises	159
<b>9 Radius and generic radius of convergence</b>	161
9.1 Differential modules have no torsion	162
9.2 Antidifferentiation	163
9.3 Radius of convergence on a disc	164
9.4 Generic radius of convergence	165
9.5 Some examples in rank 1	168
9.6 Transfer theorems	168
9.7 Geometric interpretation	170
9.8 Subsidiary radii	172
9.9 Another example in rank 1	173
9.10 Comparison with the coordinate-free definition	174
9.11 An explicit convergence estimate	175
Notes	176
Exercises	177
<b>10 Frobenius pullback and pushforward</b>	179
10.1 Why Frobenius?	180

10.2	<i>p</i> -th powers and roots	180
10.3	Moving along Frobenius	182
10.4	Frobenius antecedents	184
10.5	Frobenius descendants and subsidiary radii	186
10.6	Decomposition by spectral radius	188
10.7	Integrality of the generic radius	192
10.8	Off-center Frobenius antecedents and descendants	193
	Notes	194
	Exercises	195
<b>11</b>	<b>Variation of generic and subsidiary radii</b>	196
11.1	Harmonicity of the valuation function	197
11.2	Variation of Newton polygons	198
11.3	Variation of subsidiary radii: statements	201
11.4	Convexity for the generic radius	203
11.5	Measuring small radii	204
11.6	Larger radii	205
11.7	Monotonicity	208
11.8	Radius versus generic radius	209
11.9	Subsidiary radii as radii of optimal convergence	210
	Notes	212
	Exercises	212
<b>12</b>	<b>Decomposition by subsidiary radii</b>	214
12.1	Metrical detection of units	215
12.2	Decomposition over a closed disc	216
12.3	Decomposition over a closed annulus	220
12.4	Partial decomposition over a closed disc or annulus	222
12.5	Decomposition over an open disc or annulus	224
12.6	Modules solvable at a boundary	225
12.7	Solvable modules of rank 1	226
12.8	Clean modules	227
	Notes	231
	Exercises	232
<b>13</b>	<b><i>p</i>-adic exponents</b>	233
13.1	<i>p</i> -adic Liouville numbers	233
13.2	<i>p</i> -adic regular singularities	236
13.3	The Robba condition	237
13.4	Abstract <i>p</i> -adic exponents	238
13.5	Exponents for annuli	240
13.6	The <i>p</i> -adic Fuchs theorem for annuli	246

*Contents* ix

13.7	Transfer to a regular singularity	250
13.8	Liouville partitions	253
	Notes	256
	Exercises	257
<b>Part IV Difference Algebra and Frobenius Modules</b>		
<b>14</b>	<b>Formalism of difference algebra</b>	261
14.1	Difference algebra	261
14.2	Twisted polynomials	264
14.3	Difference-closed fields	265
14.4	Difference algebra over a complete field	267
14.5	Hodge and Newton polygons	272
14.6	The Dieudonné–Manin classification theorem	274
	Notes	277
	Exercises	279
<b>15</b>	<b>Frobenius modules</b>	281
15.1	A multitude of rings	281
15.2	Substitutions and Frobenius lifts	284
15.3	Generic versus special Frobenius	286
15.4	A reverse filtration	289
15.5	Substitution maps in the Robba ring	292
	Notes	292
	Exercises	293
<b>16</b>	<b>Frobenius modules over the Robba ring</b>	294
16.1	Frobenius modules on open discs	294
16.2	More on the Robba ring	296
16.3	Pure difference modules	298
16.4	The slope filtration theorem	300
16.5	Harder–Narasimhan filtrations	302
16.6	Extended Robba rings	303
16.7	Proof of the slope filtration theorem	304
	Notes	306
	Exercises	308
<b>Part V Frobenius Structures</b>		
<b>17</b>	<b>Frobenius structures on differential modules</b>	311
17.1	Frobenius structures	311

17.2	Frobenius structures and the generic radius of convergence	314
17.3	Independence from the Frobenius lift	316
17.4	Slope filtrations and differential structures	318
17.5	Extension of Frobenius structures	319
17.6	Frobenius intertwiners	320
	Notes	321
	Exercises	322
<b>18</b>	<b>Effective convergence bounds</b>	323
18.1	A first bound	324
18.2	Effective bounds for solvable modules	324
18.3	Better bounds using Frobenius structures	328
18.4	Logarithmic growth	331
18.5	Nonzero exponents	334
	Notes	335
	Exercises	336
<b>19</b>	<b>Galois representations and differential modules</b>	338
19.1	Representations and differential modules	339
19.2	Finite representations and overconvergent differential modules	341
19.3	The unit-root $p$ -adic local monodromy theorem	343
19.4	Ramification and differential slopes	346
	Notes	348
	Exercises	350
<b>Part VI The <math>p</math>-adic local monodromy theorem</b>		
<b>20</b>	<b>The <math>p</math>-adic local monodromy theorem</b>	353
20.1	Statement of the theorem	353
20.2	An example	355
20.3	Descent of horizontal sections	356
20.4	Local duality	359
20.5	When the residue field is imperfect	360
20.6	Minimal slope quotients	362
	Notes	363
	Exercises	366
<b>21</b>	<b>The <math>p</math>-adic local monodromy theorem: proof</b>	367
21.1	Running hypotheses	367
21.2	Modules of differential slope 0	368
21.3	Modules of rank 1	370

	<i>Contents</i>	xi
21.4	Modules of rank prime to $p$	371
21.5	The general case	372
	Notes	372
	Exercises	373
<b>22</b>	<b><i>p</i>-adic monodromy without Frobenius structures</b>	<b>374</b>
22.1	The Robba ring revisited	374
22.2	Modules of cyclic type	375
22.3	A Tannakian construction	378
22.4	Interlude on finite linear groups	382
22.5	Back to the Tannakian construction	384
22.6	Proof of the theorem	386
22.7	Relation to Frobenius structures	387
	Notes	389
	Exercises	390
 <b>Part VII Global theory</b>		
<b>23</b>	<b>Banach rings and their spectra</b>	<b>393</b>
23.1	Banach rings	393
23.2	The spectrum of a Banach ring	394
23.3	Topological properties	394
23.4	Complete residue fields	396
	Notes	397
	Exercises	397
<b>24</b>	<b>The Berkovich projective line</b>	<b>399</b>
24.1	Points	399
24.2	Classification of points	401
24.3	The domination relation	402
24.4	The tree structure	404
24.5	Skeleta	405
24.6	Harmonic and subharmonic functions	408
	Notes	408
	Exercises	409
<b>25</b>	<b>Convergence polygons</b>	<b>411</b>
25.1	The normalized radius of convergence	411
25.2	Normalized subsidiary radii and the convergence polygon	412
25.3	A constancy criterion for convergence polygons	413
25.4	Finiteness of the convergence polygon	415
25.5	Effect of singularities	417

25.6	Affinoid subspaces	418
25.7	Meromorphic differential equations	419
25.8	Open discs and annuli	420
	Notes	421
<b>26</b>	<b>Index theorems</b>	423
26.1	The index of a differential module	423
26.2	More on affinoid subspaces of $\mathbb{P}_K$	424
26.3	The Laplacian of the convergence polygon	425
26.4	An index formula for algebraic differential equations	427
26.5	Local analysis on a disc	429
26.6	Local analysis on an annulus	431
26.7	Some nonarchimedean functional analysis	433
26.8	Plus and minus indices	436
26.9	Global analysis on a disc	438
26.10	A global index formula	439
	Notes	440
	Exercises	441
<b>27</b>	<b>Local constancy at type-4 points</b>	442
27.1	Geometry around a point of type 4	442
27.2	Local constancy in the visible range	443
27.3	Local monodromy at a point of type 4	444
27.4	End of the proof	446
	Notes	446
<i>Appendix A</i>	<b>Picard–Fuchs modules</b>	449
A.1	Picard–Fuchs modules	449
A.2	Frobenius structures on Picard–Fuchs modules	450
A.3	Relationship with zeta functions	451
	Notes	452
<i>Appendix B</i>	<b>Rigid cohomology</b>	454
B.1	Isocrystals on the affine line	454
B.2	Crystalline and rigid cohomology	456
B.3	Machine computations	457
	Notes	458
<i>Appendix C</i>	<b><math>p</math>-adic Hodge theory</b>	460
C.1	A few rings	460
C.2	$(\varphi, \Gamma)$ -modules	462
C.3	Galois cohomology	464

<i>Contents</i>	xiii
C.4    Differential equations from $(\varphi, \Gamma)$ -modules	465
C.5    Beyond Galois representations	467
Notes	467
<i>References</i>	469
<i>Index of notation</i>	489
<i>Subject index</i>	491
