Apology xiii

Plan of the Book xv

Expressions of Gratitude xviii

1 Hamiltonian Formalism 1

1.1 Phase Space and Hamilton's Equations 1
Autonomous versus Non-autonomous Systems (2) – Connection with the Lagrangian Formalism (3) – Compact Notation for the Canonical Equations (10)

1.2 Dynamical Variables and First Integrals 10
The Algebra of Poisson Brackets (11) – First Integrals (14)

1.3 Use of First Integrals 21
Motion on a One-Dimensional Manifold (21) – Systems with One Degree of Freedom (25) – The Period of Oscillation (26) – Higher-Dimensional Models (28)

2 Canonical Transformations 31

2.1 Preserving the Hamiltonian Form of the Equations 32
Conditions for Canonicity (32) – Symplecticity of the Jacobian Matrix (35) – Preservation of Poisson Brackets (36) – The Hamiltonian Flow as a Canonical Transformation (39) – Preservation of Lagrange Brackets (40)

2.2 Differential Forms and Integral Invariants 42
Preservation of a 2-Form (42) – Action Integral (43)

2.3 Generating Functions 45
A First Form of Generating Function (46) – A Second Form of the Generating Function (47) – The General Class of Generating Functions (50)

2.4 Time-Dependent Canonical Transformations 52
Transformations Which Leave Time Unchanged (53) – Using the Fundamental Poisson Brackets (54) – Time-Depending

Generating Functions (55) – Changing the Time Variable (55)

2.5 The Hamilton–Jacobi Equation 57

3 Integrable Systems 63

3.1 Involution Systems 65

Some Useful Lemmas (65) – Variational Equations and First Integrals (67) – Commutation of Canonical Flows (69) – Coordinates on Invariant Manifolds (72) – Local Coordinates in Phase Space (73) – Liouville's Canonical Coordinates (75) – Changing the Involution System (77)

3.2 Liouville's Theorem 78

Integration Procedure (79) – Some Comments on Liouville's Theorem (83) – Action-Angle Variables for Systems with One Degree of Freedom (84)

3.3 On Manifolds with Non-Singular Vector Fields 88

The Flow in the Large (89) – The Stationary Group (91) – Angular Coordinates (91)

3.4 Action-Angle Variables 92

Periods in a Neighbourhood of the Torus (93) – Global Coordinates and Action-Angle Variables (98) – Non-uniqueness of the Action-Angle Variables (99) – Explicit Construction of Action-Angle Variables (100)

3.5 The Arnold–Jost Theorem 102

3.6 Delaunay Variables for the Keplerian Problem 102

Determination of Cycles (103) – Construction of the Action Variables (104) – Delaunay variables (105) – Construction of the Angle Variables (106)

3.7 The Linear Chain 107

A Complete Involution System (108) – The Frequencies of the Linear Chain (109)

3.8 The Toda Lattice 112

Lax Pairs (112) – First Integrals for the Toda Lattice (113)

4 First Integrals 117

4.1 Periodic and Quasi-Periodic Motion on a Torus 118

Motion on a Two-Dimensional Torus (119) – The Many-Dimensional Case (121) – Changing the Frequencies on a Torus (122) – Dynamics of the Kronecker Flow (123)

Table of Contents
More Information

4.2 *The Kronecker Map* 124
General Properties (124) – Resonances (125) – Dynamics of the Kronecker Map (127)

4.3 *Ergodic Properties of the Kronecker Flow* 128
Time Average and Phase Average (129) – Quasiperiodic Motions (131)

4.4 *Isochronous and Anisochronous Systems* 132
Anisochronous Non-degenerate Systems (132) – Isochronous Systems (133)

4.5 *The Theorem of Poincaré* 134
Equations for a First Integral (135) – Nonexistence of First Integrals (137)

4.6 *Some Remarks on the Theorem of Poincaré* 140
On the Genericness Condition (140) – A Puzzling Example (142) – Truncated First Integrals (144)

5 Nonlinear Oscillations 147

5.1 *Normal Form for Linear Systems* 148
The Classification of Poincaré (149) – Normal Form of a Quadratic Hamiltonian (153) – The Linear Canonical Transformation (154) – Complex Normal Form of the Hamiltonian (157) – First Integrals (158) – The Case of Real Eigenvalues (158) – The Case of Pure Imaginary Eigenvalues (159) – The Case of Complex Conjugate Eigenvalues (160)

5.2 *Non-linear Elliptic Equilibrium* 163
Use of Action-Angle Variables (163) – A Formally Integrable Case (165)

5.3 *Old-Fashioned Numerical Exploration* 168
The Galactic Models of Contopoulos and of Hénon and Heiles (169) – Poincaré Sections (171) – The Onset of Chaos (172) – Stability of a Non-linear Equilibrium (178) – Exploiting the First Integrals (183)

5.4 *Quantitative Estimates* 187
Algebraic and Analytic Setting (187) – Analytical Estimates (188) – Truncated Integrals (189) – Exponential Estimates (192)

6 The Method of Lie Series and of Lie Transforms 195

6.1 Formal Expansions 196

6.2 Lie Series 198
The Lie Series Operator (199) – The Triangle of Lie Series (201) – Composition of Lie Series (202)

6.3 Lie Transforms 206
The Triangular Diagram for the Lie Transform (207)

6.4 Analytic Framework 212
Cauchy estimates (212) – Complexification of Domains (213) – Generalized Cauchy Estimates (215)

6.5 Analyticity of Lie Series 218
Convergence of Lie Series (218) – Analyticity of the Composition of Lie Series (221)

6.6 Analyticity of the Lie Transforms 222
Convergence of the Lie Transforms (222)

6.7 Weighted Fourier Norms 226
Analytic Fourier Series (226) – Generalized Cauchy Estimates (227) – Quantitative Estimates for Lie Series (231)

7 The Normal Form of Poincaré and Birkhoff 233

7.1 The Case of an Elliptic Equilibrium 233
The Formal Algorithm (234) – The Solution of Poincaré and Birkhoff (237) – The Canonical Transformation (237) – First Integrals (238) – Back to the Direct Construction of First Integrals (240)

7.2 Action-Angle Variables for the Elliptic Equilibrium 243
The Normal Form (244) – The Non-resonant Case (244) – The Resonant Case (245) – An Example of Resonant Hamiltonian (246)

7.3 The General Problem 251
The Naive But Inconclusive Approach (251) – The Case of Constant Frequencies (252) – Expansion in Trigonometric Polynomials (254) – Some Analytical Estimates (257) – Truncated Normal Form (258) – Using Composition of Lie Series (259)

7.4 The Dark Side of Small Divisors 261
The Accumulation of Small Divisors (261)

8 Persistence of Invariant Tori 267

8.1 The Work of Kolmogorov 268
Statement of the Theorem (268) – The Normal Form of Kolmogorov (269) – Sketch of the Formal Scheme (269) – The Method of Fast Convergence (270)

8.2 The Proof According to the Scheme of Kolmogorov 272
Analytic Setting (272) – Formal Algorithm (275) – Iterative Lemma (278) – Lemma on Small Divisors (279) – Proof of the Iterative Lemma (281) – Conclusion of the Proof of Proposition 8.3 (285)

8.3 A Proof in Classical Style 289
The Formal Constructive Algorithm (290) – Quantitative Estimates (298) – Estimates for the Generating Functions (299) – The General Scheme of Estimates (301) – The Accumulation of Small Divisors (304) – The Kindness of Small Divisors (305) – Small Divisors in the Algorithm of Kolmogorov (308) – A Detailed Statement (311) – Recurrent Estimates (312) – Completion of the Proof (314) – Estimate of the Sequence ν (316)

8.4 Concluding Remarks 318
A General Scheme (319) – A Comment on Lindstedt's Series (321)

9 Long Time Stability 323

9.1 Overview on the Concept of Stability 323
A Short Historical Note (326)

9.2 The Theorem of Nekhoroshev 327
Statement of the Theorem (328) – An Overview of the Method (329)

9.3 Analytic Part 331
Formal Scheme (331) – An Explicit Expression for the Remainder (333) – Truncated First Integrals (333) – Quantitative Estimates on the Generating Sequence (334) – Estimates for the Normal Form (338) – Local Stability Lemma (339)

9.4 Geometric Part 341
Geography of Resonances (342) – Three Technical Lemmas (349) – Geometric Properties of the Geography of Resonances (352)

Table of Contents
More Information

9.5 *The Exponential Estimates* 355
Global Estimates Depending on Parameters (356) – Choice of the Parameters and Exponential Estimate (358)
9.6 *An Alternative Proof by Lochak* 360

10 Stability and Chaos 363
10.1 *The Neighbourhood of an Invariant Torus* 364
Poincaré–Birkhoff Normal Form (365) – Exponential Stability (367) – Superexponential Stability (369)
10.2 *The Roots of Chaos and Diffusion* 370
Asymptotic Orbits (371) – Stable and Unstable Manifolds (374) – Existence of a Homoclinic Orbit (375) – Existence of a Second Homoclinic Orbit (379) – Existence of Infinitely Many Homoclinic Orbits (380) – Heteroclinic Orbits and Diffusion (383)
10.3 *An Example in Dimension 2: the Standard Map* 386
Boxes into Boxes (386) – Homoclinic and Heteroclinic Tangles (390) – The Case of Higher Dimension (397)
10.4 *Stability in the Large* 399
Statement of the Theorem (400) – Sketch of the Proof (401)
10.5 *Some Final Considerations* 403

A The Geometry of Resonances 407
A.1 *Discrete Subgroups and Resonance Moduli* 407
Construction of a Basis of a Discrete Subgroup (409) – Unimodular Matrices (411) – Resonance Moduli (412) – Basis of a Resonance Module (412)
A.2 *Strong Non-resonance* 413
A Result from Diophantine Theory (415) – The Condition of Bruno (416) – Some Examples (417)

B A Quick Introduction to Symplectic Geometry 421
B.1 *Basic Elements of Symplectic Geometry* 421
The Symplectic Group (422) – Symplectic Spaces and Symplectic Orthogonality (422) – Canonical Basis of a Symplectic Space (425) – Properties of the Subspaces of a Symplectic Space (426)
