<b>Chapter 1. An Introduction to the Reproductive Biology of Flowering Plants</b>	<b>1</b>
1.1 Different Aspects of Reproductive Biology of Flowering Plants	1
1.2 Scope of Reproductive Biology of Angiosperms	5
<b>Chapter 2. The Flower</b>	<b>9</b>
2.1 Introduction	9
2.2 Organization of a Flower	11
2.3 Sexual Diversity in Angiosperms	14
2.4 Origin of Flower	16
2.5 Induction of Flowering	18
2.6 ABCDE Model of Floral Organ Development	18
Glossary	20
Key Questions	21
<b>Practicals</b>	
Exercise 2.1: To study important morphological features of randomly selected flowers	21
Exercise 2.2: To observe the sexuality of randomly selected flowers	23
<b>Chapter 3. Brief Historical Account on Transformation of Classical Embryology to Integrated Reproductive Biology</b>	<b>25</b>
3.1 Early Discoveries	25
3.2 Era of Exploration	26
3.3 Years that Laid the Foundation	27
3.4 Broadening Horizons	30
3.5 Integration of Ecological, Evolutionary and Genetical Approaches to the Study of Plant Reproductive Systems	35
<b>Chapter 4. The Anther and Male Gametophyte</b>	<b>40</b>
4.1 Introduction	40
4.2 Anther Structure and Development	41

4.2.1	Structure	41
4.2.2	Development	42
4.2.2.1	<i>Phase I</i>	43
4.2.2.2	<i>Phase II</i>	45
4.3	Anther Wall Layers	45
4.3.1	Epidermis	46
4.3.2	Endothecium	48
4.3.3	Middle Layers	51
4.3.4	Tapetum	52
4.4	Anther Dehiscence	57
4.5	Pollen Development	60
4.5.1	Microsporogenesis	60
4.5.1.1	<i>Cytokinesis during Microsporogenesis</i>	64
4.5.1.2	<i>Role of Callose during Microsporogenesis</i>	66
4.5.2	Microgametogenesis	66
4.5.2.1	<i>Vegetative and Generative cell</i>	68
4.5.2.2	<i>Bi- and Tri-cellular Pollen Grains</i>	69
4.6	Male Germ Unit (MGU)	71
4.6.1	Structure	72
4.6.2	Functions	72
4.6.3	Sperm Dimorphism	74
4.7	Pollen Wall: Structure, Synthesis and Features	74
4.7.1	Pollen Wall Structure	75
4.7.2	Pollen Wall Synthesis	75
4.7.3	Pollen Coat Substances	80
4.8	Characteristics of Pollen	81
4.8.1	Pollen Dispersal Unit	82
4.8.2	Pollen Aperture	85
4.8.3	Pollen Polarity	87
4.8.4	Pollen Symmetry	88
4.8.5	Pollen Shape	88
4.9	NPC System	88
4.10	Nemec Phenomenon	89
4.11	Pollen Development and Metabolism	91
	Glossary	93
	Key Questions	95
<b>Practicals</b>		
	Exercise 4.1: To study anther wall layers and microsporogenesis	96
	Exercise 4.2: To study a mature anther and its dehiscence	97
	Exercise 4.3: To study the ultrastructure of pollen wall layers using transmission electron micrograph	100

<b>Contents</b>	<b>ix</b>
Exercise 4.4: To identify the cellular stage of pollen at the time of anther dehiscence	100
Exercise 4.5: To study the ultrastructure of male germ unit	102
Exercise 4.6: To test the pollen grain fertility and viability	103
Exercise 4.7: To estimate the production of pollen grains in a flower	107
Exercise 4.8: To study the morphological features (shape, exine pattern and aperture) of pollen grains of different species	108
<b>Chapter 5. The Ovule and Female Gametophyte</b>	<b>119</b>
5.1 Introduction	119
5.2 Basic Structure of Ovule	120
5.3 Development of Ovule	121
5.4 Ovule Diversity	122
5.4.1 Types of Ovule on the Basis of Degree of Curvature	122
5.4.2 Types of Ovule on the Basis of Thickness of Nucellus	126
5.5 Structures Associated with Ovules	127
5.6 Development of Female Gametophyte	131
5.6.1 Megasporogenesis	132
5.6.2 Selection of Functional Megaspore and Types of Embryo Sac Development	132
5.6.3 Megagametogenesis	136
5.6.4 Different Types of Embryo Sac	138
5.6.4.1 <i>Monosporic Embryo Sacs</i>	138
5.6.4.2 <i>Bisporic Embryo Sacs</i>	139
5.6.4.3 <i>Tetrasporic Embryo Sacs</i>	140
5.6.4.4 <i>Embryo Sac Development in Chrysanthemum cinerariaefolium</i>	143
5.7 Cellular Anatomy and Ultrastructure of Cells of Embryo Sac	144
5.7.1 Egg Cell	145
5.7.2 Synergids	147
5.7.3 Central Cell	150
5.7.4 Antipodal Cells	150
5.8 Unique Ovules and Embryo Sacs	151
Glossary	153
Key Questions	154
<b>Practicals</b>	
Exercise 5.1: To study different types of ovules	155
Exercise 5.2: To study special ovular structures	158
Exercise 5.3: To study monosporic, bisporic and tetrasporic types of embryo sac development	159
Exercise 5.4: To study Polygonum-type of embryo sac development	163
Exercise 5.5: To study the ultrastructure of egg cell, synergids and central cell	164
Exercise 5.6: To estimate number of ovules in a flower	166
Exercise 5.7: To assess the receptivity of ovules using Toluidine Blue 'O' test	168

<b>Chapter 6. Pollination</b>	<b>174</b>
6.1 Introduction	174
6.2 Types of Pollination: Self and Cross	175
6.2.1 Self-Pollination	176
6.2.2 Cross-Pollination	177
6.3 Mechanisms to Promote Cross-Pollination	179
6.4 Modes of Pollination	181
6.5 Abiotic Pollination	182
6.5.1 Pollination by Wind: Anemophily	182
6.5.2 Pollination by Water: Hydrophily	185
6.6 Biotic Pollination	188
6.6.1 Pollination by Insects: Entomophily	188
6.6.1.1 <i>Bee and Wasp Pollination</i>	189
6.6.1.2 <i>Fly Pollination</i>	191
6.6.1.3 <i>Ant Pollination</i>	192
6.6.1.4 <i>Butterfly Pollination</i>	192
6.6.1.5 <i>Moth Pollination</i>	193
6.6.1.6 <i>Beetle Pollination</i>	195
6.6.2 Pollination by Birds: Ornithophily	195
6.6.3 Pollination by Bats: Chiropterophily	198
6.6.4 Pollination by Snail: Malacophily	198
6.6.5 Some Unusual Pollinators	199
6.7 Ambophily	202
6.8 Pollen Storage	202
6.8.1 Methods of Pollen Storage	203
6.8.2 Utility of Pollen Storage: Some Examples	204
Glossary	205
Key Questions	205
<b>Practicals</b>	
Exercise 6.1: To study the time of anther dehiscence	206
Exercise 6.2: To study the histochemistry of floral rewards	207
Exercise 6.3: To study the floral features of various species and discuss them in context of pollination syndrome	211
<b>Chapter 7. Pollen–Pistil Interactions and Fertilization</b>	<b>216</b>
7.1 Introduction	216
7.2 Stigma and Style	217
7.3 Pollen–Pistil Interactions	221
7.3.1 Pollen Capture and Adhesion	222
7.3.2 Pollen Hydration	225
7.3.3 Pollen Germination	225
7.3.4 Penetration of Stigma by Pollen Tube	226

<b>Contents</b>	<b>xi</b>
7.3.5 Pollen Tube Growth	227
7.3.5.1 Pollen Tube Cytoplasm	227
7.3.5.2 Pollen Tube Wall	229
7.4 Pollen Tube Guidance: Cues from Sporophytic Tissue, Stylar Exudates and Ovule	231
7.5 Pollen Tube Entry into Ovule and Embryo Sac	233
7.6 Double Fertilization	233
7.7 Unique Cases	236
7.8 <i>In vitro</i> Pollen Tube Germination	240
Glossary	242
Key Questions	243
<b>Practicals</b>	
Exercise 7.1: To study the stigma and the styles of different flowers	244
Exercise 7.2: To study the stigma receptivity by cytochemical localization of non-specific esterases and peroxidase activity	244
Exercise 7.3: To test germinability of pollen grains under <i>in vitro</i> condition through various methods	247
Exercise 7.4: To study the pollen tube path in the pistil by decolorized aniline blue staining	249
<b>Chapter 8. Self-Incompatibility</b>	<b>257</b>
8.1 Introduction	257
8.2 Self-incompatibility: Classification and Types	258
8.3 Genetic Control of Self-incompatibility	259
8.3.1 Homomorphic Self-incompatibility	259
8.3.1.1 <i>Gametophytic Self-incompatibility (GSI)</i>	260
8.3.1.2 <i>Sporophytic Self-incompatibility (SSI)</i>	261
8.3.2 Two-loci or Bi-factorial System	262
8.3.3 Heteromorphic Self-incompatibility	262
8.4 Pollen and Pollen Tube Rejection	264
8.4.1 Homomorphic Systems	264
8.4.1.1 <i>Sporophytic Self-incompatibility System</i>	265
8.4.1.2 <i>Gametophytic Self-incompatibility System</i>	267
8.4.2 Heteromorphic Systems	271
8.5 Methods to Overcome Self-incompatibility	273
8.5.1 Mixed Pollination	273
8.5.2 Bud Pollination	273
8.5.3 Stub Pollination	274
8.5.4 Intra Ovarian Pollination	274
8.5.5 <i>In vitro</i> Pollination and Fertilization	275
8.5.6 Modification of Stigmatic Surface	275
8.5.7 Heat Treatment of Style	275

8.5.8	Irradiation	276
8.5.9	Increased Level of Carbon Dioxide	276
8.5.10	Parasexual Hybridization	276
8.5.11	Genome Editing	277
	Glossary	277
	Key Questions	278
<b>Practicals</b>		
	Exercise 8.1: To determine the interspecific incompatibility in species using semi <i>in vivo</i> pollination and decolorized aniline blue staining method	279
	Exercise 8.2: To determine the type of homomorphic self-incompatibility (GSI or SSI) in a species by employing semi <i>in vivo</i> pollination and decolorized aniline blue staining method	281
	Exercise 8.3: To determine the mating/breeding system of a species using <i>in vivo</i> manual pollination	282
	Exercise 8.4: To calculate Index of Self-incompatibility (ISI)	284
	Exercise 8.5: To analyze the breeding system of a species by calculating its Pollen: Ovule ratio	285
<b>Chapter 9. Endosperm</b>		<b>289</b>
9.1	Introduction	289
9.2	Ultrastructural Changes in the Central Cell and Formation of Primary Endosperm Nucleus	290
9.3	Types of Endosperm	292
9.3.1	Nuclear Endosperm	293
9.3.2	Cellular Endosperm	297
9.3.3	Helobial Endosperm	300
9.4	Some Unusual Types of Endosperm	302
9.4.1	Composite Endosperm	302
9.4.2	Ruminate Endosperm	302
9.5	Cellularization of Nuclear Endosperm	303
9.6	Endosperm in Cereals	306
9.7	Hormonal Regulation of Endosperm	312
9.8	Functions of Endosperm	313
9.8.1	Nutrition of Embryo	313
9.8.2	Regulation of Embryo Development	313
9.8.3	Seed Development	314
9.8.4	Seed Germination	315
9.9	Nutritive Tissues other than Endosperm	315
9.9.1	Pseudoembryo Sac/Nucellar Plasmodium	315
9.9.2	Perisperm	316
9.9.3	Chalazosperm	317

<b>Contents</b>	<b>xiii</b>
Glossary	317
Key Questions	318
<b>Practicals</b>	
Exercise 9.1: To dissect and study free-nuclear type of endosperm from developing seeds	319
<b>Chapter 10. Zygotic Embryogenesis</b>	<b>324</b>
10.1 Introduction	324
10.2 Structure of the Embryo	324
10.3 Egg to Zygote: Post-Fertilization Changes, Ultrastructure and Polarity	325
10.4 Embryogeny: From Zygote to Multi-cellular Embryo	327
10.4.1 Types of Embryo Development	328
10.4.2 Early Embryogenesis: Octant Configurations of Pro-embryo	329
10.5 Embryogenesis and Embryo Patterning	332
10.5.1 Embryogenesis and Embryo Pattern Formation in Dicots	332
10.5.2 Embryogenesis in Monocots	334
10.5.3 Embryogenesis in Poaceae	339
10.6 Unusual Features of Embryo and Embryogenesis in Some Angiosperms	340
10.6.1 Embryo Development in <i>Paeonia</i>	341
10.6.2 Reduced Embryos	341
10.7 Suspensor	342
10.7.1 Structure	342
10.7.2 Ultrastructure	344
10.7.3 Role of Suspensor	345
10.8 Embryo Nourishment	347
Glossary	349
Key Questions	349
<b>Practicals</b>	
Exercise 10.1: To study zygotic embryogenesis in dicots using micrographs	350
Exercise 10.2: To dissect young embryo from developing seed	351
<b>Chapter 11. Polyembryony and Apomixis</b>	<b>357</b>
11.1 Introduction	357
11.2 Polyembryony	359
11.2.1 Cleavage of Zygote or Proembryos	359
11.2.2 Formation of Embryos from Cells of Embryo Sac other than Egg Cell	360
11.2.3 Presence of More than One Embryo Sac within Same Ovule	361
11.2.4 Formation of Embryos by Sporophytic Tissue of Ovule	361
11.3 Classification of Polyembryony	363
11.4 Causes and Inheritance of Polyembryony	364
11.5 Practical Applications and Significance of Polyembryony	365
11.6 Apomixis	365

11.7 Types of Apomixis	366
11.7.1 Sporophytic Apomixis	367
11.7.2 Gametophytic Apomixis	367
11.7.2.1 <i>Diplospory</i>	367
11.7.2.2 <i>Apospory</i>	370
11.8 Role of Pollination in Embryo and Endosperm Development among Apomicts	373
11.9 Genetics of Apomixis	373
11.10 Potential Applications of Apomixis	375
11.11 Methods to Screen and Study Apomixis	379
Glossary	380
Key Questions	381
<b>Practicals</b>	
Exercise 11.1: To screen apomixis in ovules using histo-clearing technique	382
Exercise 11.2: To study the polyembryony in seeds	386
Exercise 11.3: To determine the type of embryo by enumerating key features	387
<b>Chapter 12. Seed</b>	<b>390</b>
12.1 Introduction	390
12.2 Structure and Morphology of Seeds	392
12.3 Types of Seed	394
12.3.1 Classification 1: Based on Ovule Type	394
12.3.2 Classification 2: Based on Embryo Size, Shape and Position	395
12.3.3 Other Types	396
12.4 Seed Coat	398
12.4.1 Structure and Development	398
12.4.2 Functions of Seed Coat	406
12.5 Specialized Seed Associated Structures/Appendages	409
12.6 Seed Dispersal	412
12.6.1 Advantages of Dispersal	413
12.6.2 Mechanisms of Dispersal	413
12.6.2.1 <i>Autochory</i>	414
12.6.2.2 <i>Anemochory</i>	417
12.6.2.3 <i>Hydrochory</i>	418
12.6.2.4 <i>Zoochory</i>	420
Glossary	424
Key Questions	425
<b>Practicals</b>	
Exercise 12.1: To calculate the mass and determine the shape (seed traits) of different seeds	426
Exercise 12.2: To classify different types of seeds	428
Exercise 12.3: To study seed dispersal mechanisms in various species	428

<i>Contents</i>	xv
Exercise 12.4: To calculate percentage seed viability, germinability and seed vigor	428
Exercise 12.5: To calculate the ovule: seed ratio	431
Exercise 12.6: Observation of seed dispersal mechanism	432
<b>Chapter 13. Plant Germline Transformation</b>	<b>436</b>
13.1 Introduction	436
13.2 Plant Germline Transformation	437
13.3 Male Germline Transformation	439
13.3.1 <i>Agrobacterium</i> Mediated Transformation	442
13.3.2 Particle Bombardment Method	444
13.3.3 MAGELITR	444
13.3.4 Microinjection	445
13.3.5 Sonication	445
13.3.6 Electroporation	445
13.4 Female Germline Transformation	446
13.4.1 <i>In Planta</i> Agroinfiltration	447
13.4.2 Floral Dip	447
13.4.3 Floral Spray	448
13.4.4 Pollen Tube Mediated Transformation	449
13.4.5 Ovary/Pistil Drip Transformation	449
13.5 Factors Influencing Germline Transformation	450
Glossary	451
Key Questions	452
<b>Practicals</b>	
Exercise 13.1: To identify the uninucleate stage of pollen grains and demonstration of technique of anther culture	452
Exercise 13.2: To demonstrate the floral dip method of germline transformation	456
<i>Index</i>	463
<i>Color Plates</i>	473
