<i>Preface</i>	<i>page</i> xiii
<i>Notation</i>	xix
PART I THE KANTOROVICH PROBLEM	
1 An Introduction to the Monge Problem	3
1.1 The Original Monge Problem	3
1.2 A Modern Formulation of the Monge Problem	5
1.3 Optimality via Duality and Transport Rays	7
1.4 Monotone Transport Maps	9
1.5 Knothe Maps	10
2 Discrete Transport Problems	14
2.1 The Discrete Kantorovich Problem	14
2.2 c -Cyclical Monotonicity with Discrete Measures	17
2.3 Basics about Convex Functions on \mathbb{R}^n	20
2.4 The Discrete Kantorovich Problem with Quadratic Cost	27
2.5 The Discrete Monge Problem	32
3 The Kantorovich Problem	35
3.1 Transport Plans	35
3.2 Formulation of the Kantorovich Problem	37
3.3 Existence of Minimizers in the Kantorovich Problem	40
3.4 c -Cyclical Monotonicity with General Measures	42
3.5 Kantorovich Duality for General Transport Costs	43
3.6 Two Additional Results on c -Cyclical Monotonicity	49
3.7 Linear and Quadratic Kantorovich Dualities	51

PART II SOLUTION OF THE MONGE PROBLEM WITH QUADRATIC COST: THE BRENIER–MCCANN THEOREM		
4	The Brenier Theorem	59
4.1	The Brenier Theorem: Statement and Proof	61
4.2	Inverse of a Brenier Map and Fenchel–Legendre Transform	64
4.3	Brenier Maps under Rigid Motions and Dilations	65
5	First Order Differentiability of Convex Functions	67
5.1	First Order Differentiability and Rectifiability	67
5.2	Implicit Function Theorem for Convex Functions	69
6	The Brenier–McCann Theorem	73
6.1	Proof of the Existence Statement	74
6.2	Proof of the Uniqueness Statement	75
7	Second Order Differentiability of Convex Functions	77
7.1	Distributional Derivatives of Convex Functions	77
7.2	Alexandrov’s Theorem for Convex Functions	79
8	The Monge–Ampère Equation for Brenier Maps	86
8.1	Convex Inverse Function Theorem	88
8.2	Jacobians of Convex Gradients	90
8.3	Derivation of the Monge–Ampère Equation	93
PART III APPLICATIONS TO PDE AND THE CALCULUS OF VARIATIONS AND THE WASSERSTEIN SPACE		
9	Isoperimetric and Sobolev Inequalities in Sharp Form	97
9.1	A Jacobian–Laplacian Estimate	97
9.2	The Euclidean Isoperimetric Inequality	98
9.3	The Sobolev Inequality on \mathbb{R}^n	100
10	Displacement Convexity and Equilibrium of Gases	104
10.1	A Variational Model for Self-interacting Gases	104
10.2	Displacement Interpolation	109
10.3	Displacement Convexity of Internal Energies	112
10.4	The Brunn–Minkowski Inequality	115
11	The Wasserstein Distance W_2 on $\mathcal{P}_2(\mathbb{R}^n)$	118
11.1	Displacement Interpolation and Geodesics in $(\mathcal{P}_2(\mathbb{R}^n), W_2)$	118

Contents

xi

11.2	Some Basic Remarks about \mathbf{W}_2	120
11.3	The Wasserstein Space $(\mathcal{P}_2(\mathbb{R}^n), \mathbf{W}_2)$	124
12	Gradient Flows and the Minimizing Movements Scheme	129
12.1	Gradient Flows in \mathbb{R}^n and Convexity	129
12.2	Gradient Flow Interpretations of the Heat Equation	133
12.3	The Minimizing Movements Scheme	135
13	The Fokker–Planck Equation in the Wasserstein Space	139
13.1	The Fokker–Planck Equation	139
13.2	First Variation Formulae for Inner Variations	142
13.3	Analysis of the Entropy Functional	147
13.4	Implementation of the Minimizing Movements Scheme	150
13.5	Displacement Convexity and Convergence to Equilibrium	160
14	The Euler Equations and Isochoric Projections	164
14.1	Isochoric Transformations of a Domain	164
14.2	The Euler Equations and Principle of Least Action	166
14.3	The Euler Equations as Geodesics Equations	170
15	Action Minimization, Eulerian Velocities, and Otto’s Calculus	174
15.1	Eulerian Velocities and Action for Curves of Measures	175
15.2	From Vector Fields to Curves of Measures	179
15.3	Displacement Interpolation and the Continuity Equation	181
15.4	Lipschitz Curves Admit Eulerian Velocities	183
15.5	The Benamou–Brenier Formula	184
15.6	Otto’s Calculus	189
PART IV SOLUTION OF THE MONGE PROBLEM WITH LINEAR COST: THE SUDAKOV THEOREM		
16	Optimal Transport Maps on the Real Line	195
16.1	Cumulative Distribution Functions	195
16.2	Optimal Transport on the Real Line	197
17	Disintegration	204
17.1	Statement of the Disintegration Theorem and Examples	205
17.2	Proof of the Disintegration Theorem	208
17.3	Stochasticity of Transport Plans	211
17.4	$\mathbf{K}_c = \mathbf{M}_c$ for Nonatomic Origin Measures	212

18	Solution to the Monge Problem with Linear Cost	216
18.1	Transport Rays and Transport Sets	219
18.2	Construction of the Sudakov Maps	227
18.3	Kantorovich Potentials Are Countably $C^{1,1}$ -Regular	238
18.4	Proof of the Sudakov Theorem	240
18.5	Some Technical Measure-Theoretic Arguments	242
19	An Introduction to the Needle Decomposition Method	247
19.1	The Payne–Weinberger Comparison Theorem	248
19.2	The Localization Theorem	254
19.3	$C^{1,1}$ -Extensions of Kantorovich Potentials	256
19.4	Concave Needles and Proof of the Localization Theorem	259
	<i>Appendix A Radon Measures on \mathbb{R}^n and Related Topics</i>	268
A.1	Borel and Radon Measures, Main Examples	268
A.2	Support and Concentration Set of a Measure	269
A.3	Fubini’s Theorem	269
A.4	Push-Forward of a Measure	270
A.5	Approximation Properties	270
A.6	Weak-Star Convergence	271
A.7	Weak-Star Compactness	271
A.8	Narrow Convergence	272
A.9	Differentiation Theory of Radon Measures	273
A.10	Lipschitz Functions and Area Formula	274
A.11	Vector-valued Radon Measures	275
A.12	Regularization by Convolution	276
A.13	Lipschitz Approximation of Functions of Bounded Variation	276
A.14	Coarea Formula	278
A.15	Rectifiable Sets	279
A.16	The $C^{1,1}$ -Version of the Whitney Extension Theorem	280
	<i>Appendix B Bibliographical Notes</i>	281
	<i>References</i>	288
	<i>Index</i>	294
