Preface	xv
Acknowledgments	xxviii

1 What Is Risk? 1

1.1 Frank Knight's Formulation	2
1.2 Finite Probability Spaces	3
1.3 Knightian Uncertainty	4
1.4 Making Risky Decisions	6
1.4.1 Reader Poll 1: St. Petersburg Paradox	6
1.4.2 Reader Poll 2: The Generous Billionaires	7
1.4.3 Reader Poll 3: The Probabilistic Thug	8
1.5 Basic Economics Terminology	9
1.6 Basic Capital Markets Terminology	12
1.7 Basic Probability Terminology	15
1.8 Utility Theory	20
1.8.1 Von Neumann–Morgenstern Utility Theory	22
1.8.2 VNM Axioms and Theorem	23
1.8.3 Risk Preferences	26
1.8.4 Drawbacks of Utility Theory	32

2 Risk Metrics 37

2.1 Caveat Laws	37
2.1.1 Portfolio Insurance	39
2.2 Volatility	42
2.3 VaR, ES, cVaR, and Spectral Measures	44
2.3.1 VaR Measures with Discrete Distributions	47
2.4 Risk-Adjusted Reward Measures	50
2.5 Coherent Risk	53
2.6 Risk-Averse Prices	56
2.7 No-Arbitrage	58
2.7.1 Limits of Arbitrage	59
2.7.2 Short Sales and Short Squeezes	60
2.7.3 No-Arbitrage Formulation	66

2.8	State Prices and Risk-Neutral Probabilities	66
2.9	Stochastic Discount Factors	68
2.10	The Ross Recovery Theorem	72
2.10.1	Ross Recovery: Key Assumptions	73
2.10.2	Ross Recovery: Matrix Calculations	75
2.10.3	Computing the SDF: Ross's Method	76
2.10.4	Computing the SDF: Jackwerth and Menner's Method	77
2.10.5	Ross Recovery Theorem: Empirical Problems	78

3 Fixed-Income Modeling 81

3.1	Real, Inflation, and Nominal Rates	82
3.2	Discounting	85
3.3	The Risk in the Risk-Free Rate	86
3.4	Basic Fixed-Income Mathematics	89
3.4.1	Generic Pricing Equation	90
3.4.2	Price Changes as Rates Change	91
3.4.3	Duration Calculations; Convexity	93
3.4.4	Approximations and Basis Risk	96
3.5	Yield Curves	97
3.5.1	Features of Yield Curves	99
3.5.2	Zero Curves and Par Curves	100
3.5.3	Types of Yield Curves	103
3.5.4	Yield Curves and Economic Conditions	103
3.5.5	Rolldown and Key Rate Durations	105
3.5.6	Interpolation and Smoothing Techniques	107
3.6	Implied Forward Curves	109
3.7	Stochastic Process Terminology	111
3.8	Term Structure Models	114
3.8.1	Short-Rate Models: General Framework	115
3.8.2	Short-Rate Models: Specific Framework	116
3.8.3	Expected Value of the Vasicek Model	119
3.8.4	Other Short-Rate Models	121

4 Equity Modeling 123

4.1	Markowitz Efficient Frontier	123
4.1.1	Equality-Constrained Frontier	126
4.1.2	Equality-Constrained Frontier: Example	129
4.1.3	Inequality Constraints	131
4.1.4	Efficient Frontier and Utility Functions	133
4.1.5	The Capital Market Line	134
4.1.6	Benchmark-Relative	136
4.1.7	Efficient Frontiers: Theory and Practice	138

Contents	vii
4.2 Parameter Estimation Methods	139
4.2.1 Review of Bayes's Rule	139
4.2.2 Shrinkage Estimators	142
4.2.3 Statistical Tests	147
4.2.4 Resampled Efficient Frontier	151
4.3 Black–Litterman	154
4.3.1 Black–Litterman Example	156
5 Convex Optimization	159
5.1 Basic Optimization Terminology	159
5.2 Convex Properties	161
5.3 Unconstrained Convex Optimization	165
5.3.1 Gradient Descent	167
5.3.2 Newton's Method	171
5.4 Constrained Optimization	173
5.4.1 Lagrange Duality	175
5.4.2 KKT Conditions with Convexity	178
5.5 Barrier Methods	180
6 Factor Models	187
6.1 The Efficient Market Hypothesis	188
6.2 The Capital Asset Pricing Model and the Four-Factor Model	190
6.3 Arbitrage Pricing Theory	192
6.3.1 APT: Exact Form	193
6.3.2 APT: Inclusion of Specific Behavior	195
6.4 Factor Models in Practice	198
6.5 Principal Components Analysis	200
7 Distributions	210
7.1 Central Limit Theorem	211
7.1.1 Checking Normality: Q-Q and P-P Plots	213
7.1.2 Jarque–Bera	215
7.1.3 Causes of Non-Normality	216
7.1.4 Market Ages	217
7.2 Student's T Distribution	220
7.3 Mixtures of Normals	222
7.4 Stable Distributions	226
7.5 Extreme Value Distributions	231
7.5.1 Block Maxima	234
7.5.2 Domains of Attraction	236
7.6 Tail Distributions	237
7.6.1 Fitting Parameters to Tail Distributions	239

viii Contents

8	Simulation, Scenarios, and Stress Testing	244
8.1	Historical Simulation	245
8.2	Delta-Normal	248
	8.2.1 The Cornish–Fisher Expansion	252
8.3	Monte Carlo Simulation	253
	8.3.1 Delta-Gamma, Delta-Gamma-Theta Simulations	257
8.4	Markov Chain Monte Carlo	258
8.5	Stress Testing and Scenario Analysis	265
9	Time-Varying Volatility	267
9.1	Historical Volatility	267
9.2	Options and Volatility	270
	9.2.1 Review of Options Terminology	270
	9.2.2 Market Volatilities and Volatility Markets	273
	9.2.3 Volatility Skews	276
9.3	Volatility Models	278
	9.3.1 Risk-Neutral Density Recovery	279
	9.3.2 Real-World Density Recovery	280
	9.3.3 Stochastic Volatility Modeling	282
	9.3.4 Local Volatility Modeling	283
	9.3.5 SABR Modeling	284
	9.3.6 VIX® Calculations	286
9.4	Time Series Terminology	289
9.5	ARCH and GARCH Modeling	293
	9.5.1 ARCH and GARCH variants	297
10	Modeling Relationships	301
10.1	Pearson Correlation	301
10.2	Spearman Correlation	303
10.3	Conditional Correlation	305
10.4	Correlations and the Economy	309
10.5	Implied Correlations	312
10.6	Copula Functions	316
	10.6.1 Copula Example: Gaussian Copulas	318
10.7	Historical Estimation of Correlation Matrices	322
10.8	Time Series Estimates of Covariances and Correlations	325
	10.8.1 Constant and Dynamic Conditional Correlation	325
	10.8.2 Implementation of Dynamic Conditional Correlations	328
	10.8.3 MacGyver Method	333

Contents

ix

11	Credit Modeling	335
11.1	Basic Credit Risk Concepts	335
11.2	Credit Ratings	337
11.2.1	Investment Grade and Speculative Grade	340
11.2.2	Historical Default Frequencies	342
11.2.3	Sovereign Debt Ratings	348
11.2.4	Sovereign Spreads in the Eurozone	352
11.3	The Credit Spread Premium Puzzle	354
11.4	The Merton Model	357
11.4.1	Merton's Term Structure of Credit Spreads	359
11.4.2	Enterprise Value Example	361
11.4.3	Model Improvement: Iterative Enterprise Value	363
11.4.4	Model Improvement: KMV model	365
11.4.5	Predictive Power of Default Estimates	368
11.5	Credit Spread Correlates	371
11.6	Credit Spread Metrics	372
11.7	Credit Factor Models	375
11.8	Z-Scores, Reduced-Form, and Hybrid Models	377
11.9	Implied Default Rates	381
11.10	Credit Default Swaps	383
12	Hedging	387
12.1	Risk Unbundling	387
12.1.1	Quantity-Adjusting Options	391
12.2	Franchise Preservation	395
12.2.1	Siegel's Paradox	397
12.2.2	Modigliani–Miller and Franchise Hedging	402
12.2.3	Bank Franchise Hedging	406
12.2.4	Asset–Liability Management: Interest Rate Swaps	410
12.2.5	Interest Rate Swaps: Simplified Model	413
12.2.6	Interest Rate Swaps: Market	416
12.2.7	Longevity Risk	419
12.3	Illiquidity Hedging	420
12.4	Distribution Reshaping	422
12.4.1	Distribution Reshaping with Options	423
12.4.2	Option Greeks	429
12.4.3	Fixed-Income Options	433
12.5	Convexity Hedging	434
	Appendix: Code Segments	440
	References	591
	Index	609
