

CONTENTS

<i>Preface</i>	ix	3 Cartesian and Newtonian world systems	49
<i>Introduction</i>	1	The decline of Aristotelian science	49
		The Cartesian world system	51
		The Newtonian world system	54
		Newton and the infinite universe	60
		The atomic theory	61
		Reflections	61
		Projects	63
		Further reading	64
		Sources	64
PART I		4 Cosmology after Newton and before Einstein	66
1 What is cosmology?	13	Hierarchical universes	66
The Universe	13	The nebula hypothesis	70
Cosmology	15	Cosmical islands	70
The magic universe	17	The new astronomy	73
The mythic universe	17	The Victorian universe	77
The anthropometric universe	19	The age problem	78
Cosmology and society	20	Fall of the Victorian universe	80
Reflections	21	Reflections	81
Projects	25	Projects	83
Further reading	26	Further reading	83
Sources	26	Sources	84
2 Early scientific cosmology	28	5 Stars	87
The beginning of western science	28	The distant stars	87
Plato's universe	29	A forest of stars	89
Three cosmic systems of the ancient world	29	Inside the stars	93
The Aristotelian universe	30	Nuclear energy	95
The Epicurean universe	33	Birth of stars	100
The Stoic universe	34	The star is dead! Long live the star!	103
The mystery religions	34	Reflections	105
The medieval universe	35	Projects	110
The heliocentric universe	37		
The infinite universe	38		
Reflections	42		
Projects	45		
Further reading	46		
Sources	46		

vi	CONTENTS	
Further reading	111	
Sources	112	
6 Galaxies	113	
Our Galaxy	113	
The distant galaxies	119	
Birth of galaxies	123	
Radio galaxies and quasars	126	
Reflections	129	
Projects	131	
Further reading	132	
Sources	132	
7 Location and the cosmic center	134	
The location principle	134	
The isotropic universe	137	
The cosmological principle	138	
Perfect cosmological principle	140	
Reflections	141	
Projects	145	
Further reading	145	
Sources	145	
8 Containment and the cosmic edge	147	
The containment principle	147	
The cosmic edge	149	
Containment of space and time	153	
Design argument	155	
Many physical universes	156	
Theistic and anthropic principles	157	
Whither the laws of nature?	159	
Containment riddle	161	
Reflections	162	
Projects	166	
Further reading	167	
Sources	167	
9 Space and time	169	
Space	169	
Space and time	171	
Time	172	
The “now”	176	
Time travel	178	
Atomic time	179	
Reflections	180	
Projects	184	
Further reading	185	
Sources	185	
		PART II
		10 Curved space
		189
		Euclidean geometry
		189
		Non-Euclidean geometry
		190
		Measuring the curvature of space
		194
		The “outstanding theorem”
		196
		Riemannian spaces
		198
		Reflections
		199
		Projects
		203
		Further reading
		204
		Sources
		204
		11 Special relativity
		206
		New ideas for old
		206
		The strangeness of spacetime
		207
		Travels in space and time
		210
		Reflections
		214
		Projects
		218
		Further reading
		218
		Sources
		219
		12 General relativity
		220
		Principle of equivalence
		220
		A closer look
		222
		Geometry and gravity
		224
		Tidal forces
		225
		Theory of general relativity
		228
		Tests of general relativity
		233
		Mach’s principle
		236
		Reflections
		239
		Projects
		243
		Further reading
		244
		Sources
		245
		13 Black holes
		246
		Gravitational collapse
		246
		Curved spacetime of black holes
		248
		Rotating black holes
		253
		Superholes
		257
		Miniholes
		258
		Black-hole magic
		259
		Hawking radiation
		260
		Black holes are heat engines
		263
		Reflections
		264
		Projects
		267
		Further reading
		268
		Sources
		268
		14 Expansion of the universe
		270
		The great discovery
		270

CONTENTS

vii

The expanding space paradigm	275	Universes in compression	368
The expanding rubber sheet universe	275	Universes in tension	369
Measuring the expansion of the universe	285	Worlds in convulsion	371
The velocity–distance law	287	Kinematic relativity	373
Accelerating and decelerating universes	289	Continuous creation	374
Classifying universes	290	Scalar–tensor theory	376
Reflections	292	Reflections	379
Projects	299	Projects	383
Further reading	300	Further reading	384
Sources	300	Sources	384
15 Redshifts	302	19 Observational cosmology	387
Cosmic redshifts	302	Introduction	387
The three redshifts	306	Cosmography	387
Two basic laws	307	Local observations	388
Distances and recession velocities	309	Intermediate-distance observations	397
Cosmological pitfalls	309	Large-distance observations	400
Redshift curiosities	311	Is the universe open or closed?	403
Reflections	314	Reflections	404
Projects	320	Projects	407
Sources	321	Further reading	408
		Sources	408
16 Newtonian cosmology	323		
Static Newtonian universe	323	PART III	
Expanding cosmic sphere	326	20 The early universe	413
Cosmological constant	331	The primeval atom	413
Why does Newtonian cosmology give the same answer?	332	The last fifteen billion years	415
Reflections	333	The first million years	416
Projects	336	The first second	419
Further reading	337	The first hundred microseconds	422
Sources	337	Grand unified era	427
		Reflections	428
17 The cosmic box	339	Projects	435
The universe in a nutshell	339	Further reading	436
Particles and waves	341	Sources	436
Thermodynamics and cosmology	344		
Where has all the energy gone?	348	21 Horizons in the universe	438
Reflections	350	What are cosmological horizons?	438
Projects	353	Horizons in static universes	439
Sources	353	The horizon riddle	441
		The horizon problem	442
18 The many universes	355	Hubble spheres	443
Static universes	355	Reception and emission distances	444
De Sitter universe	358	The photon horizon in cosmology	446
Friedmann universes	359	The particle horizon	447
Oscillating universes	362	Conformal diagrams	449
Friedmann–Lemaître universes	363	Event horizons	451
Classification of universes	365	Reflections	454

vii

Projects	457	Reflections	506
Sources	457	Projects	513
		Further reading	513
22 Inflation	458	25 Creation of the universe	515
Perfect symmetry	458	Cosmogogenesis I	515
The monopole problem	458	Creation myths	515
Discovery of inflation	459	Genesis	518
Cosmic tension	459	Cosmogogenesis II	519
Inflation	460	Cosmogogenesis III	520
Inflation solves the monopole problem	463	Fitness of the universe	522
Inflation solves the flatness problem	463	Fitness and creation	523
Inflation solves the horizon problem	465	Theistic theories	523
Nonluminous matter	467	Anthropic theories	524
The origin of galaxies	468	Spontaneous creation theories	524
Reflections	470	Natural selection theories	525
Projects	472	Eschatology	526
Further reading	472	Reflections	528
Sources	473	Projects	532
		Further reading	532
23 The cosmic numbers	474	Sources	533
Constants of nature	474	26 Life in the universe	535
The cosmic connection	479	Origin of life on Earth	535
Magic numbers	480	The exuberant Earth	537
Solving the cosmic connection	483	The evolution of life	538
Reflections	486	Natural selection	540
Projects	490	Intelligent life	542
Further reading	490	What is life?	542
Sources	490	Life beyond the Earth	543
24 Darkness at night	491	Epilogue	547
The great riddle	491	Reflections	547
Two interpretations	493	Projects	551
Halley's shells	494	Further reading	552
Bright-sky universes	497	Sources	553
The paradox resolved	499	<i>Appendix – Fundamental quantities</i>	555
“The golden walls of the universe”	502	<i>Index</i>	557
The celebrated hypothesis	503		
Expansion and darkness	503
