|----------|--------------------------------------|---------|
|          | <i>Introduction by David Masser</i>  | page ix |
|          | <i>Preface</i>                       | xiii    |
| <b>1</b> | <b>The origins</b>                   |         |
| 1        | Liouville's theorem                  | 1       |
| 2        | Transcendence of $e$                 | 3       |
| 3        | Lindemann's theorem                  | 6       |
| <b>2</b> | <b>Linear forms in logarithms</b>    |         |
| 1        | Introduction                         | 9       |
| 2        | Corollaries                          | 11      |
| 3        | Notation                             | 12      |
| 4        | The auxiliary function               | 13      |
| 5        | Proof of main theorem                | 20      |
| <b>3</b> | <b>Lower bounds for linear forms</b> |         |
| 1        | Introduction                         | 22      |
| 2        | Preliminaries                        | 24      |
| 3        | The auxiliary function               | 28      |
| 4        | Proof of main theorem                | 34      |
| <b>4</b> | <b>Diophantine equations</b>         |         |
| 1        | Introduction                         | 36      |
| 2        | The Thue equation                    | 38      |
| 3        | The hyperelliptic equation           | 40      |
| 4        | Curves of genus 1                    | 43      |
| 5        | Quantitative bounds                  | 44      |

|          |   |    |
|----------|---|----|
| <b>5</b> | <b>Class numbers of imaginary quadratic fields</b>  |    |
| 1        | Introduction  | 47 |
| 2        | $L$ -functions                                      | 48 |
| 3        | Limit formula                                       | 50 |
| 4        | Class number 1                                      | 51 |
| 5        | Class number 2                                      | 52 |
| <b>6</b> | <b>Elliptic functions</b>                           |    |
| 1        | Introduction  | 55 |
| 2        | Corollaries   | 56 |
| 3        | Linear equations                                    | 58 |
| 4        | The auxiliary function                              | 58 |
| 5        | Proof of main theorem                               | 60 |
| 6        | Periods and quasi-periods                           | 61 |
| <b>7</b> | <b>Rational approximations to algebraic numbers</b> |    |
| 1        | Introduction  | 66 |
| 2        | Wronskians  | 69 |
| 3        | The index   | 69 |
| 4        | A combinatorial lemma                               | 73 |
| 5        | Grids   | 74 |
| 6        | The auxiliary polynomial                            | 75 |
| 7        | Successive minima                                   | 76 |
| 8        | Comparison of minima                                | 79 |
| 9        | Exterior algebra                                    | 81 |
| 10       | Proof of main theorem                               | 82 |
| <b>8</b> | <b>Mahler's classification</b>                      |    |
| 1        | Introduction  | 85 |
| 2        | $A$ -numbers  | 87 |
| 3        | Algebraic dependence                                | 88 |
| 4        | Heights of polynomials                              | 89 |
| 5        | $S$ -numbers  | 90 |
| 6        | $U$ -numbers  | 90 |
| 7        | $T$ -numbers  | 92 |
| <b>9</b> | <b>Metrical theory</b>                              |    |
| 1        | Introduction  | 95 |
| 2        | Zeros of polynomials                                | 96 |
| 3        | Null sets   | 98 |

## CONTENTS

vii

|           |   |     |
|-----------|---|-----|
| 4         | Intersections of intervals                          | 99  |
| 5         | Proof of main theorem                               | 100 |
| <b>10</b> | <b>The exponential function</b>                     |     |
| 1         | Introduction  | 103 |
| 2         | Fundamental polynomials                             | 104 |
| 3         | Proof of main theorem                               | 108 |
| <b>11</b> | <b>The Siegel-Shidlovsky theorems</b>               |     |
| 1         | Introduction  | 109 |
| 2         | Basic construction                                  | 111 |
| 3         | Further lemmas                                      | 114 |
| 4         | Proof of main theorem                               | 115 |
| <b>12</b> | <b>Algebraic independence</b>                       |     |
| 1         | Introduction  | 118 |
| 2         | Exponential polynomials                             | 120 |
| 3         | Heights   | 122 |
| 4         | Algebraic criterion                                 | 124 |
| 5         | Main arguments                                      | 125 |
