

Index

- 2-3-4 tree
 - deletion, 491–495
 - insertion, 490–491
 - node names, 489
- abstract data type, 178–179
 - definition, 180
- Abstract Windowing Toolkit (AWT), 93
- active learning, 5
- adjacency list, 541
- adjacency matrix, 541
- aggregate analysis, 429
- al-Khwārizmī, Muḥammad ibn Mūsā, 3
- Albers, Josef, 267
- algorithm
 - definition, 2
 - history, 3
 - vs. procedure, 2
- algorithm analysis, 2
- amortized analysis
 - definition, 185
- Appleby, Austin, 401
- ArrayList**
 - add, 72
 - amortized analysis of append, 185–186
 - appending, 181–182
 - capacity vs. size, 181
 - comparison to linked list, 210
 - creating, 72
 - implementation, 182–185
 - insertion, 188
 - removal, 187
 - remove, 72
- arrays
 - creating, 113
 - indexing, 113
 - modifying in a method, 116
 - multidimensional arrays, 118
- asymptotic analysis, 162
- autoboxing, 74
- average case performance, 159
- AVL tree, 516
- B-tree, 495–497
- Back, Adam, 413
- backtracking search, 364–369
- base case (recursion), 241
- Bayer, Rudolf, 495
- Berners-Lee, Tim, 337
- best-case performance, 159
- Big-O notation
 - definition, 163
 - limitations, 173
 - statement counting method, 165
- binary search
 - complexity, 169–171
 - iterative implementation, 156–158
 - proof of correctness, 167–169
 - recursive implementation, 243–244
- binary search tree
 - analysis, 479–480
 - deletion, 473–479
 - insertion, 471–473
 - ordering, 468–469
 - searching, 469–471
- binary space partitioning, 486
- binary tree
 - almost-complete, 518
 - full, 458
 - perfect, 457
- binary trees
 - definitions, 457–458
 - number of nodes, 458
- Binet's formula, 21
- bipartite graph
 - definition, 567
 - testing using 2-coloring, 568
- Bitcoin, 413–415

- blockchain, 413–415
- Bloom’s taxonomy, 7
- Boids, 225–233
- box fractals, 282
- bubble sort, 332
- “Burning Ship” fractal, 298
- Bush, Vannevar, 454
- Caesar cipher, 39–42
- Canvas, 93
- Carmack, John, 486
- casting, 16
- cellular automata
 - definition, 126
 - one-dimensional, 126–128
 - one-dimensional implementation, 128–132
 - Rule 18, 132
 - Rule 30, 132
- chaos theory, 299
- cho-han, 25
- Chomsky, Noam, 464
- chromatic number, 568
- circular buffer, 384–388
- circular list, 201
- Collatz conjecture, 263
- `compareTo`, 82, 301
- constraint satisfaction problem, 364
- constructor method, 62–63
- Conway, John, 132
- cuckoo hashing, 432
- database index, 490
- `default` access modifier, 65
- deque, 383
- `Deque` interface, 383
- design patterns, 60
- Diceware password generator, 416
- digital signature, 406
- Dijkstra’s algorithm
 - complexity, 555–556
 - correctness, 557–559
 - implementation, 554–555
- disjoint set forest, 585–586
- Doom, 486
- dot product, 149
- double buffering, 223–224
- doubly linked list, 197–201
- Doyle, Sir Arthur Conan
 - The Adventure of the Dancing Men*, 38
- driver class, 61
- Dutch national flag problem, 329
- encapsulation, 58–59
- enhanced `for` loop, 79
- entropy (password strength), 417
- `enum` keyword, 74–76
- enumerated types, 74–76
- Epoch (system time), 160
- Erlang, Agner, 398
- Euler, Leonhard, 565
 - Latin squares, 363
- exceptions, 20
- `extends` keyword, 93
- external sorting, 334
- fairy chess piece, 393
- Feynman problem-solving algorithm, 3
- `final` keyword, 19
- fire effect, 234–235
- flood-filling, 388–391
- `for` loop, 31–32
- formatted printing, 19
- Forth language, 361
- Four Color Theorem, 577
- fractal
 - self-similarity, 276
- Futoshiki, 380–381
- garbage collection
 - generational, 551
 - mark-and-sweep, 550
- Gardner, Martin, 153
- generic types, 183
- generics, 72
- Gosling, James, 8
- graph
 - breadth-first traversal, 545
 - definition, 539
 - depth-first traversal, 547
 - digraph, 539
 - representations, 541
 - weighted, 540
- graph coloring, 568
- graph traversal
 - breadth-first, 545
 - depth-first, 547
- `Graphics`, 93
- graphics coordinate system, 94
- greedy algorithm, 583
- hailstone sequence, 263
- hash code
 - printing objects, 64

- hash function
 - collision, 403
 - cryptographic, 404
 - definition, 399
 - properties, 403
- hash table
 - analysis of chaining, 428–429
 - chained hashing, 425–428
 - direct addressing, 423–425
 - open addressing, 430–431
 - rebalancing, 429
- hashCode**, 400–401
- HashMap**, 421–423
- HashSet**, 433
- heap
 - array representation, 523–524
 - bottom-up initialization procedure, 521
 - Fibonacci heap, 537
 - heap property, 518
 - insertion, 518–519
 - min-max heap, 536
 - returning the max or min, 520–521
- heap (memory region), 549
- Heapsort
 - comparison to other sorts, 531
 - implementation, 529–531
- hi-lo card game, 82–84
