Preface *page* ix

1 Introduction 1
1.1 Newtonian Gravity 1
1.2 Equivalence Principle 9

2 Metrics 14
2.1 Euclidean Space 14
2.2 Alternative Metrics in 2-Dimensional Space 16
2.3 The Sphere – the Map Maker's Problem 18
2.4 Flat Space-Time 21
2.5 The Hyperbolic Plane 26
2.6 Expanding Space-Time 30
2.7 Gravitational Red-Shift and the Global Positioning System 36
2.8 Tides – the Relativistic Map Maker's Problem 41

3 Geodesics 44
3.1 Euclidean Geometry 44
3.2 Spherical Geometry 46
3.3 Minkowski Space-Time 47
3.4 Relativistic Particle Motion on a Sphere 54
3.5 Newtonian Gravity 55
3.6 Cosmological Geometry and the Expansion of the Universe 56
3.7 The Schwarzschild Geometry and Black Holes 58
3.8 Gravitational Waves 78

4 The Geometry of Curved Spaces 85
4.1 Inner Products 85

Table of Contents
More Information

4.2 General Coordinate Transformations 88
4.3 Vectors 92
4.4 Covariant Derivatives 94
4.5 Connections and Geodesics 102
4.6 The Riemann Tensor 109
4.7 Problems 116

5 Einstein's Field Equations 119
5.1 Derivation of the Equations 119
5.2 The Physical Meaning of Einstein's Equations 123

6 Solutions of Einstein's Equations in Empty Space 126
6.1 Schwarzschild Metric 126
6.2 Gravitational Waves 128

7 Cosmology and the Big Bang 139
7.1 The Friedmann Equations 146
7.2 Microwave Background 155
7.3 Thermal History of the Early Universe 158

Appendix A Tensors of Type (p, q) 177

Appendix B The Riemann Tensor 178

Appendix C The Energy-Momentum Tensor 187

Appendix D The Schwarzschild Metric 192

Appendix E Robertson–Walker Space-Time 195
