

THE CAMBRIDGE HANDBOOK OF LAW AND POLICY FOR NFTS

As blockchains in general and NFTs in particular reshape operation logistics, data creation, and data management, these technologies bring forth many legal and ethical dilemmas. This handbook offers a comprehensive exploration of the impact of these technologies in different industries and sectors, including finance, anti-money laundering, taxation, campaign-finance, and more. The book specifically provides insights and potential solutions for cutting-edge issues related to intellectual property rights, data privacy and strategy, information management, and ethical blockchain use, simultaneously presenting insights, case studies, and recommendations to help anyone seeking to shape effective, balanced regulation to foster innovation while safeguarding the interests of all stakeholders. This handbook sets out an invaluable roadmap for navigating the dynamic and evolving landscape of these new technologies.

Nizan Geslevich Packin is Professor of Law at the Baruch College Zicklin School of Business and University of Haifa. Her corporate law background, public-sector work, and academic contributions provide a unique perspective on tech policy and business law.
