

## The Gas Mask in Interwar Germany

Exploring the history of the gas mask in Germany from 1915 to the eve of World War II, Peter Thompson traces how chemical weapons and protective technologies such as the gas mask produced new relationships to danger, risk, management, and mastery in the modern age of mass destruction. Recounting the apocalyptic visions of chemical death that circulated in interwar Germany, he argues that while everyday encounters with the gas mask tended to exacerbate fears, the mask also came to symbolize debates about the development of military and chemical technologies in the Weimar Republic and the Third Reich. He underscores how the gas mask was tied into the creation of an exclusionary national community under the Nazis and the altered perception of environmental danger in the second half of the twentieth century. As this innovative new history shows, chemical warfare and protection technologies came to represent poignant visions of the German future.

**Peter Thompson** is Assistant Professor of History, Philosophy, and Sociology of Science at Lyman Briggs College, Michigan State University.

*SCIENCE IN HISTORY*

*Series Editors*

**Simon J. Schaffer**, University of Cambridge

**James A. Secord**, University of Cambridge

**Science in History** is a major series of ambitious books on the history of the sciences from the mid-eighteenth century through the mid-twentieth century, highlighting work that interprets the sciences from perspectives drawn from across the discipline of history. The focus on the major epoch of global economic, industrial and social transformations is intended to encourage the use of sophisticated historical models to make sense of the ways in which the sciences have developed and changed. The series encourages the exploration of a wide range of scientific traditions and the interrelations between them. It particularly welcomes work that takes seriously the material practices of the sciences and is broad in geographical scope.

1.1 The different departments in Fritz Haber's KWI during World War I	<i>page 47</i>
1.2 Total amounts of chemicals (in tons) and gas shells produced by Great Britain, France, and Germany between 1915 and 1918	52
2.1 Estimated gas casualties in World War I	73

## Acknowledgments

---

The extent to which other scholars and academic institutions have supported this project is greater than can be properly acknowledged here. Nevertheless, special thanks are due to the members of my University of Illinois dissertation committee, who guided this project from its inception and provided numerous sets of comments that have reached across diverse historical subfields. This exceptional committee was comprised of coadvisors Mark Micale and Peter Fritzsche, as well as David Sepkoski, Harry Liebersohn, and Jimena Canales.

For comments on specific sections of the dissertation project, I would like to thank Craig Koslofsky, Tamara Chaplin, Antoinette Burton, Sabine Hake, Bruno Cabanes, Chris Otter, Roger Chickering, Christoph Weber, Karen Hagemann, and Konrad Jarausch. This message of thanks extends to the members of the 2018–2019 University of Illinois Urbana-Champaign (UIUC) Dissertation Writing Workshops, the UIUC German Reading Group, the 2019 German Historical Institute Transatlantic Doctoral Seminar, and the North Carolina German Studies Seminar. Among the many UIUC history doctoral students who have read and commented on parts of this project, special thanks are due to Ryan Allen for both his incomparable scholarly insights and his friendship.

I would like to thank the UIUC History Department, the Siebel Scholars Program, the Illinois Program for Research in the Humanities, and the Fulbright Program for their generous financial contributions to the dissertation stage of this project. I would also like to thank Ulrich Herbert and the University of Freiburg School of History, which provided me with a welcoming institutional home while I conducted archival research in Germany.

This project required consultation with far too many archives in order to thank them all here, but I would like to express particular appreciation to the staffs of the Federal Militärarchiv, the Evonik Industries archive, the Bayer archive, the BASF archive, the Bavarian Kriegsarchiv, the

archive of the Max Planck Society, the German Diaries Archive in Emmendingen, and the Deutsches Literaturarchiv in Marbach.

As the dissertation was transformed into a monograph, it received substantial support through a postdoctoral fellowship at the Beckman Center at the Science History Institute in Philadelphia, PA. I would like to thank Charlotte Abney Salomon, the Associate Director of the Beckman Center; Jesse Smith, the Director of Curatorial Affairs; and my cohort of Beckman Center fellows for providing a welcoming and supportive environment in which to write on the history of modern chemistry.

For shepherding the work of a new author through the publication process, I would like to thank Lucy Rhymer at Cambridge University Press, and I would also like to thank my two anonymous peer reviewers for their invaluable comments. For the right to use several of the book's images, I would like to again thank the Max Planck Society Archive as well as Randall Bytwerk and the German Propaganda Archive at Calvin University.

On a personal note, I would like to thank my parents and sister for endlessly supporting an aspiring scholar. And finally, I would like to thank Alison Masyr, who was there for me every step of the way.
