## THE SYNTAX OF IMPERATIVES

The imperative clause is one of three major sentence types that have been found to be universal across the languages of the world. Compared to declaratives and interrogatives, the imperative type has received diverse analyses in the literature. This cutting-edge study puts forward a new linguistic theory of imperatives, arguing that categories of the speech act, specifically Speaker and Addressee, are conceptually necessary for an adequate syntactic account. The book offers compelling empirical and descriptive evidence by surveying new typological data in the critical assessment of competing hypotheses towards an indexical syntax of human language. An engaging read for students and researchers interested in linguistics, philosophy, and the syntax of language.

ASIER ALCÁZAR is Associate Professor of Spanish at the University of Missouri. His research interests include generative syntax and its interfaces with semantics and morphology, corpus linguistics, and typology.

MARIO SALTARELLI is Professor of Spanish at the Dornsife College of the University of Southern California. His research and teaching includes publications in Romance and Basque linguistics, with recent emphasis on deixis in a context-sensitive theory of syntax.
