Preface	<i>page</i> ix
Introduction	xi
Part I Risk Bounds for Portfolios Based on Marginal Information	1
1 Risk Bounds with Known Marginal Distributions	5
1.1 Some Basic Notions and Results of Risk Analysis	5
1.2 Standard Bounds, VaR Bounds, and Worst Case Distributions	9
1.3 Worst Case Risk Vectors: The Conditional Moment Method and the Mixing Method	15
1.4 Mixability and Convex Minima of Portfolios	18
2 The Rearrangement Algorithm	23
2.1 Formulation of Dependence Problems as Rearrangement Problems	24
2.2 The Rearrangement Algorithm	29
2.3 The Block Rearrangement Algorithm	37
3 Dual Bounds	47
3.1 Hoeffding–Fréchet Functionals	47
3.2 Dual Representation of Hoeffding–Fréchet Functionals	48
3.3 Sharpness of the Dual Bounds for the Tail Risk	55
4 Asymptotic Equivalence Results	59
4.1 Introduction and Motivation	59
4.2 Asymptotics for Conservative Capital Charges: The Homogeneous Finite Mean Case	61
4.3 Asymptotics for VaR in the Infinite Mean Case	64
4.4 Asymptotic Equivalence in the Inhomogeneous Case	67

Part II Additional Dependence Constraints	71
5 Improved Standard Bounds	75
5.1 Standard and Improved Standard Bounds for Monotonic Functions	75
5.2 Computation of Improved Standard Bounds	80
5.3 VaR Bounds with Two-Sided Dependence Information	84
6 VaR Bounds with Variance Constraints	92
6.1 VaR Bounds with an Upper Bound on the Variance	93
6.2 Algorithm to Approximate VaR Bounds	99
6.3 Generalization to Constraints on Higher Moments on Default Probabilities	106
6.4 Discussion of Consequences for Credit Risk Modeling	115
7 Distributions Specified on a Subset	122
7.1 Improved Hoeffding–Fréchet Bounds	122
7.2 Distribution Functions or Copulas with Given Bounds on a Subset	125
7.3 Distributions Known on a Subset	130
Part III Additional Information on the Structure	143
8 Additional Information on Functionals of the Risk Vector	146
8.1 Higher-Dimensional Marginals	146
8.2 Functionals of the Risk Vector	151
9 Partially Specified Risk Factor Models	161
9.1 Partially Specified Factor Models	162
9.2 Risk Bounds	164
9.3 Bounds for Convex Risk Measures	170
9.4 Relation between VaR and TVaR Bounds	175
9.5 Application to Credit Risk Portfolios	184
10 Models with a Specified Subgroup Structure	186
10.1 Subgroup Models with Positive and Negative Internal Dependence	187
10.2 Models with Independent Subgroups	194
10.3 VaR Bounds in Subgroup Models with Dependence Information within and between the Subgroups	202
Part IV Risk Bounds under Moment Information	219
11 Bounds on VaR, TVaR, and RVaR under Moment Information	222
11.1 VaR Bounds: Bounded Domain	222
11.2 VaR Bounds: Unbounded Domain	236
11.3 TVaR and RVaR Bounds	237
11.4 Proofs	239

	Contents	vii
12	Bounds for Distortion Risk Measures under Moment Information	243
	12.1 Bounds for Distortion Risk Measures: Bounded Domain	243
	12.2 Bounds for Distortion Risk Measures: Unbounded Domain	252
	12.3 Proofs	254
13	Bounds for VaR, TVaR, and RVaR under Unimodality Constraints	266
	13.1 VaR Bounds	267
	13.2 RVaR and TVaR Bounds	274
	13.3 Application to Model Risk Assessment of a Credit Risk Portfolio	278
	13.4 Proofs	279
14	Moment Bounds in Neighborhood Models	283
	14.1 Problem Formulation	283
	14.2 Bounds on Distortion Risk Measures	285
	14.3 Bounds on Range VaR	291
	14.4 Application to an Insurance Portfolio	294
	14.5 Proofs	299
	14.6 Appendix: Isotonic Projection	305
	14.7 Appendix: Models for Insurance Portfolio Losses	307
	References	309
	Index	320
