	<i>Preface</i>	xiv
	<i>Acknowledgements</i>	xvii
	<i>Notational conventions</i>	xviii
1	Spin and helicity	1
1.1	Spin and rotations in non-relativistic quantum mechanics	2
1.2	Spin and helicity in a relativistic process	7
1.2.1	Particles with non-zero mass	11
1.2.2	The physical interpretation of helicity and canonical spin states	12
1.2.3	Particles with zero mass	15
2	The effect of Lorentz and discrete transformations on helicity states, fields and wave functions	18
2.1	Particles with non-zero mass	18
2.2	Examples of Wick and Wigner rotations	20
2.2.1	Pure rotation of axes	20
2.2.2	Pure Lorentz boost of axes	21
2.2.3	Boost along or opposite to \mathbf{p}	22
2.2.4	Transformation from CM to Lab	23
2.2.5	Non-relativistic limit of CM to Lab transformation	23
2.2.6	Ultra high energy collisions	23
2.2.7	Massless particles	24
2.2.8	The Thomas precession	24
2.3	The discrete transformations	27
2.3.1	Parity	27
2.3.2	Time reversal	28
2.3.3	Charge conjugation	30
2.4	Fields and wave functions	30

viii	<i>Contents</i>	
	2.4.1 The discrete transformations of the fields	33
	2.4.2 Isospin multiplets for antiparticles	35
3	The spin density matrix	38
3.1	The non-relativistic density matrix	39
	3.1.1 Definition	39
	3.1.2 Some general properties of $\rho_{mm'}$	40
	3.1.3 Combined systems of several particle types	41
	3.1.4 The independent parameters specifying ρ	43
	3.1.5 The multipole parameters	44
	3.1.6 Multipole parameters for combined systems of particles	46
	3.1.7 Even and odd polarization	47
	3.1.8 The effect of rotations on the density matrix	47
	3.1.9 Diagonalization of ρ . The quantization axis	48
	3.1.10 Other choices of basis matrices	48
	3.1.11 Invariant characterization of the state of polarization of an ensemble	49
	3.1.12 Spin-1 particles and photons	51
	3.1.13 Positivity of the density matrix	56
3.2	The relativistic case	57
	3.2.1 Definition of the helicity density matrix	57
	3.2.2 Definition of helicity multipole parameters	58
	3.2.3 The effect of Lorentz transformations on the helicity density matrix	59
	3.2.4 Transformation law for multipole parameters	59
3.3	Choices of reference frame for a reaction	60
	3.3.1 Density matrix for the initial particles	61
	3.3.2 Density matrix of final state particles	63
3.4	Covariant spin vectors	67
4	Transition amplitudes	73
4.1	Helicity amplitudes for elastic and pseudoelastic reactions	73
4.2	Symmetry properties of helicity amplitudes	75
	4.2.1 Parity	75
	4.2.2 Time reversal	75
	4.2.3 Identical particles	76
	4.2.4 Charge conjugation	78
4.3	Some analytic properties of the helicity amplitudes	79
4.4	Crossing for helicity amplitudes	80
4.5	Transition amplitudes in field theory	82
4.6	Structure of matrix elements	82

<i>Contents</i>		ix
4.6.1	Matrix elements of a vector current	82
4.6.2	Vector and axial-vector coupling	85
4.6.3	Chirality	89
5	The observables of a reaction	92
5.1	The generalized optical theorem	92
5.1.1	Nucleon–nucleon scattering	93
5.1.2	Particles of arbitrary spin	94
5.1.3	Application to deuteron–nucleon and deuteron–deuteron scattering	96
5.2	The final state helicity density matrix	98
5.2.1	Definition	98
5.2.2	Rank conditions	99
5.2.3	Angular momentum constraints near $\theta = 0, \pi$	99
5.3	The CM observables and the dynamical reaction parameters	101
5.3.1	Properties of the CM reaction parameters	102
5.4	Experimental determination of the CM reaction parameters	104
5.4.1	Unpolarized initial state	105
5.4.2	Polarized beam, unpolarized target	107
5.4.3	Polarized target, unpolarized beam	112
5.4.4	Polarized beam and target	112
5.5	The laboratory reaction parameters	113
5.6	Applications: Cartesian formalism for initial particles with spin 1/2	115
5.6.1	The reaction spin 1/2 + spin 1/2 \rightarrow spin 1/2 + spin 1/2	115
5.6.2	The reactions spin 0 + spin 1/2 \rightarrow spin 0 + spin 1/2 and spin 1/2 + spin 1/2 \rightarrow spin 0 + spin 0	119
5.6.3	The reactions spin 1/2 + spin 1/2 \rightarrow arbitrary-spin particles	120
5.6.4	Connection between photon and spin-1/2 induced reactions	122
5.7	Non-linear relations amongst the observables	123
5.8	Multiparticle and inclusive reactions	125
5.8.1	CM reaction parameters and final state density matrix	125
6	The production of polarized hadrons	129
6.1	Polarized proton sources	130
6.2	Polarized proton targets	133
6.2.1	Frozen targets	133
6.2.2	Gas-jet targets	137
6.3	The acceleration of polarized particles	143
6.3.1	Dynamics of the relativistic mean spin vector	144
6.3.2	Difficulties in the acceleration of polarized particles	147
6.3.3	The Siberian snake	151
6.3.4	Stern–Gerlach polarization of protons and antiprotons	154
6.4	Polarized secondary and tertiary beams	158

x	<i>Contents</i>	
7	The production of polarized e^\pm	165
7.1	The natural polarization of electrons circulating in a perfect storage ring	165
7.1.1	Imperfect storage rings	173
7.2	Polarization at LEP and HERA	176
7.2.1	Polarization at LEP	176
7.2.2	Polarization at HERA	179
7.3	Polarization at SLC	181
8	Analysis of polarized states: polarimetry	185
8.1	Stable particles	186
8.1.1	Reaction mechanism understood	187
8.1.2	Reaction mechanism not known	204
8.2	Unstable particles	209
8.2.1	Two-particle decay of spin- J resonance	209
8.2.2	Three-particle decay of a spin- J resonance	223
9	Electroweak interactions	234
9.1	Summary of the Standard Model	235
9.2	Precision tests of the Standard Model	239
9.2.1	The reaction $e^-e^+ \rightarrow$ fermion–antifermion pair	241
9.2.2	The reaction $e^-e^+ \rightarrow$ quark–antiquark pair	255
9.3	Summary	257
10	Quantum chromodynamics: spin in the world of massless partons	258
10.1	A brief introduction to QCD	258
10.2	Local gauge invariance in QCD	262
10.3	Feynman rules for massless particles	263
10.3.1	The calculus of massless spinors	265
10.4	The helicity theorem for massless fermions	268
10.5	Spin structure from a fermion line	270
10.6	Example: high energy $e^- + \mu^- \rightarrow e^- + \mu^-$	272
10.7	Massive spinors	273
10.8	Polarization vectors	274
10.9	Shorthand notation for spinor products	278
10.10	QED: high energy Compton scattering	279
10.11	QCD: gluon Compton scattering	281
10.12	QCD: Multigluon amplitudes	284
10.12.1	The colour structure	285
10.12.2	Helicity structure of the n -gluon amplitude	286
10.12.3	The amplitude for $G + G \rightarrow G + G$	287
10.12.4	Colour sums for gluon reactions	292

<i>Contents</i>		xi
10.12.5	Colour sum for $GG \rightarrow GG$	294
10.12.6	Some properties of n -gluon amplitudes	296
11	The spin of the nucleon: polarized deep inelastic scattering	298
11.1	Introduction	298
11.2	Deep inelastic scattering	299
11.3	General formalism and structure functions	302
11.4	The simple parton model	305
11.5	Field-theoretic generalization of the parton model	308
11.5.1	Longitudinal polarization: the quark contribution to $g_1(x)$	316
11.5.2	Transverse polarization: $g_2(x)$	317
11.6	Moments of the structure functions, sum rules and the spin crisis	319
11.6.1	A spin crisis in the parton model	323
11.6.2	The gluon anomaly	324
11.7	QCD corrections and evolution	326
11.7.1	Beyond leading order; scheme dependence	327
11.8	Phenomenology: the polarized-parton distributions	331
11.8.1	Behaviour as $x \rightarrow 0$ and $x \rightarrow 1$	336
11.9	The general partonic structure of the nucleon	339
11.9.1	Evolution for $\Delta_T q(x, Q^2)$	343
11.10	The future: neutrino beams?	344
12	Two-spin and parity-violating single-spin asymmetries at large scale	348
12.1	Inclusive and semi-inclusive reactions: general approach	349
12.2	Longitudinal two-spin asymmetries	352
12.2.1	$pp \rightarrow \pi^0 X$	355
12.2.2	Prompt photon production	357
12.2.3	The Drell–Yan reaction $pp \rightarrow l^+ l^- X$	358
12.2.4	Drell–Yan production of J/Ψ and χ_2	362
12.2.5	Semi-inclusive lepton–hadron scattering	365
12.3	Parity-violating longitudinal single-spin asymmetries	368
12.3.1	Small- p_T single-spin W^\pm and Z^0 production	369
12.3.2	Larger- p_T single-spin W^\pm production	371
12.3.3	Larger- p_T single-spin massive Drell–Yan production	375
12.4	Transverse two-spin asymmetries	375
13	One-particle inclusive transverse single-spin asymmetries	382
13.1	Theoretical approaches	383
13.2	Standard QCD-parton model with soft-physics asymmetries	388
13.3	Collins mechanism for single-spin asymmetry	391
13.4	Beyond the standard QCD parton model	398
13.5	Phenomenological models	408
13.5.1	The Lund model	409

xii	<i>Contents</i>	
	13.5.2 The Thomas precession model	410
	13.5.3 Concluding remarks	411
14	Elastic scattering at high energies	413
14.1	Small momentum transfer: general	414
14.2	Electromagnetic interference revisited	420
14.3	Elastic scattering at large momentum transfer	423
	14.3.1 The asymptotic behaviour	424
	14.3.2 Complications of exclusive reactions	427
	14.3.3 Summary	431
	Appendix 1 The irreducible representation matrices for the rotation group and the rotation functions $d_{\lambda\mu}^j(\theta)$	433
	Appendix 2 Homogeneous Lorentz transformations and their representations	437
A2.1	The finite-dimensional representations	437
A2.2	Spinors	439
A2.3	Connection between spinor and vector representations	442
	Appendix 3 Spin properties of fields and wave equations	444
A3.1	Relativistic quantum fields	444
A3.2	Irreducible relativistic quantum fields	446
A3.3	Parity and field equations	447
A3.4	The Dirac equation	449
	Appendix 4 Transversity amplitudes	450
A4.1	Definition of transversity amplitudes	450
A4.2	Symmetry of transversity amplitudes	451
A4.3	Some analytic properties of transversity amplitudes	452
	Appendix 5 Common notations for helicity amplitudes	453
	Appendix 6 The coefficients $\mathcal{A}_{l'm'}(lm)$	455
	Appendix 7 The coefficients $\mathcal{C}_{l_1 m_1; l_1' m_1'}^{lm; l' m'}$	457
	Appendix 8 Symmetry properties of the Cartesian reaction parameters	459
A8.1	The CM reaction parameters	459
A8.2	The Argonne Lab reaction parameters	461
	Appendix 9 ‘Shorthand’ notation and nomenclature for the Argonne Lab reaction parameters	463
	Appendix 10 The linearly independent reaction parameters for various reactions and their relation to the helicity amplitudes	465
A10.1	$0 + 1/2 \rightarrow 0 + 1/2$	465
A10.2	$A(1/2) + B(1/2) \rightarrow 0 + 0$	466

<i>Contents</i>	xiii
A10.3 $A + B \rightarrow A + B$ all with spin $1/2$	466
A10.4 Photoproduction of pseudoscalar mesons	470
A10.5 Vector meson production in $0^-(1/2)^+ \rightarrow 1^-(1/2)^+$	471
A10.6 Baryon resonance production in $0^-(1/2)^+ \rightarrow 0^-(3/2)^+$	472
Appendix 11 The Feynman rules for QCD	473
A12 Dirac spinors and matrix elements	476
A12.1 General properties	476
A12.2 Helicity spinors and Lorentz transformations	478
A12.3 The Dirac–Pauli representation	480
A12.4 The Weyl representation	481
A12.5 Massless fermions	481
A12.6 The Fierz rearrangement theorem	483
<i>References</i>	485
<i>Index</i>	494
