<i>Preface</i>	<i>page xi</i>
Part I Astronomical Origins	
1 The Foundations of Astrobiology	3
1.1 Key concepts and definitions	3
1.2 A brief history of astrobiology	8
1.3 Problems	11
2 From the Big Bang to Molecules	13
2.1 The expanding universe	14
2.2 The formation of stars	20
2.3 Nucleosynthesis in stars	23
2.4 The formation of molecules	27
2.5 Problems	35
3 Planet Formation and Migration	37
3.1 Protoplanetary disc structure and chemistry	38
3.2 The formation of planets	49
3.3 Evolution and migration	59
3.4 Final remarks: a population synthesis approach	68
3.5 Problems	69
Part II Earth	
4 Conditions on Early Earth	75
4.1 Channels for internal heating and heat transport	75
4.2 A rough timeline of Hadean Earth	79
4.3 The timeline and consequences of impacts	85
4.4 Problems	86
5 Origin(s) of Life on Earth	88
5.1 Building blocks of life	90
5.2 Minimum cell size based on biochemical constraints	97
5.3 Paradigms galore in the origin(s) of life	99
5.4 Synthesis of biomolecular building blocks on Earth	105
5.5 Potential sites for the origin(s) of life	112
5.6 Final remarks: a physics coda	117
5.7 Problems	119
	vii

viii Contents

6	Co-evolution of Life and Environment on Earth	122
6.1	Earth's evolutionary timeline	123
6.2	Paradigms for understanding major evolutionary events	133
6.3	Rise in atmospheric oxygen: causes and consequences	135
6.4	Mass extinctions	139
6.5	Problems	142
Part III Habitability		
7	Instantaneous Habitability	147
7.1	Energy sources for life	149
7.2	Physical and chemical limits of life	162
7.3	Final remarks: polyextremophiles and transfer of life	169
7.4	Problems	170
8	Continuous Habitability	173
8.1	The circumstellar habitable zone	173
8.2	Stellar factors	181
8.3	Planetary factors	187
8.4	Galactic factors	193
8.5	Problems	197
Part IV Astrobiological Targets		
9	Mars	203
9.1	Basic physical properties	203
9.2	Instantaneous habitability	205
9.3	Continuous habitability	211
9.4	The quest for Martian life	216
9.5	Problems	220
10	Icy Worlds	222
10.1	On the commonality of icy worlds	223
10.2	Icy worlds in the solar system	224
10.3	Physical properties of icy worlds	232
10.4	Origin(s) of life	235
10.5	Habitability	238
10.6	Evolutionary trajectories	242
10.7	Problems	243
11	'Exotic' Life	246
11.1	Water and its alternatives	246
11.2	Carbon and its alternatives	253

	Contents	ix
11.3 Exotic life in the solar system?		257
11.4 Final remarks: comprehending exotic life		263
11.5 Problems		263
12 Detecting and Characterising Exoplanets		266
12.1 Methods for detecting exoplanets		267
12.2 The characterisation of exoplanets		278
12.3 Final remarks: future of exoplanet characterisation		286
12.4 Problems		287
Part V Detecting Life		
13 Biosignatures		293
13.1 In situ biosignatures		294
13.2 Remote-sensing biosignatures		304
13.3 Rubrics for life detection		313
13.4 Problems		315
14 Technosignatures		317
14.1 The Drake equation		317
14.2 The Fermi paradox		322
14.3 Interlude: the Kardashev scale		327
14.4 Searching for technosignatures		328
14.5 Problems		337
Part VI Futures		
15 The Future of Humankind		341
15.1 The future of humanity on Earth		341
15.2 The future of humanity beyond Earth		345
15.3 Denouement		350
15.4 Problems		351
<i>References</i>		353
<i>Author index</i>		392
<i>Subject index</i>		393
