<b>Part 1</b>	<b>Thinking like an epidemiologist</b>	<b>1</b>
---------------	--	----------

<b>1</b>	<b>Thinking critically, problem-solving and setting priorities in epidemiology: Epi what?</b>	<b>2</b>
	Introduction	3
	Epidemiology	4
	An approach to critical thinking	5
	How are health priorities determined?	15
	Role of epidemiology	24
	Conclusion	25
	Further reading	25
	Questions	26
	References	28

<b>Part 2</b>	<b>Analysing: How big is the health issue?</b>	<b>33</b>
---------------	--	-----------

<b>2</b>	<b>Talking like an epidemiologist: Numbers are just numbers, right?</b>	<b>34</b>
	Introduction	35
	Frequency counts	35
	Incidence and prevalence	37
	Numerator and denominator	44
	Ratios, proportions and rates	44
	Morbidity and mortality	54
	Conclusion	56
	Further reading	57
	Questions	58
	References	59
<b>3</b>	<b>Making comparisons: You can't compare apples with oranges – or can you?</b>	<b>60</b>
	Introduction	61
	Crude, age-specific and age-standardised rates	61
	Age-standardisation	66

Mortality-based measures	72
Measures that incorporate morbidity	80
Conclusion	88
Further reading	89
Questions	89
References	91

**Part 3 Reasoning: How to investigate causes of death and ill-health** **93**

<b>4 Opening the epidemiological toolbox: The known knowns, the known unknowns and the unknown unknowns ...</b>	<b>94</b>
Introduction	95
A comprehensive taxonomy of study design	103
Overarching design considerations	113
Conclusion	117
Further reading	118
Questions	118
References	119
<b>5 Describing the problem: Will I be late for my class because of the unusual traffic congestion on my way to the university?</b>	<b>121</b>
Introduction	122
Identifying what, who, when and where	122
Collecting data for descriptive epidemiology and interpreting findings	136
Importance of descriptive epidemiology	151
Conclusion	153
Further reading	153
Questions	154
References	156

**Part 4 Problem-solving: Why do some people get a disease, become ill or get better?** **159**

<b>6 Measuring exposure and the outcome together: Does less study get done when it's sunny outside?</b>	<b>160</b>
Introduction	161
Population, sample and sampling	162
Cross-sectional studies: Their features, strengths and limitations	165
Establishing associations in cross-sectional studies	170
Ecological studies: Their features, strengths and limitations	177
Conclusion	184
Further reading	185

Questions	185
References	187
<b>7 Starting with the outcome: What do you think might cause headaches in health science students?</b>	<b>189</b>
Introduction	190
Case-control studies	191
Selecting cases and controls	199
Bias in case-control studies	204
Strengths and limitations of case-control studies	209
Conclusion	211
Further reading	211
Questions	212
References	214
<b>8 Starting with exposure: What happens if you eat pizza and potato chips every day?</b>	<b>217</b>
Introduction	218
Cohort studies	219
Measuring outcomes in cohort studies	224
Potential for bias in cohort studies	230
Strengths and limitations of cohort studies	236
Conclusion	239
Further reading	240
Questions	240
References	243
<b>9 Controlling exposure: Is it worth taking that medicine?</b>	<b>245</b>
Introduction	246
Randomised controlled trials	247
Methodological aspects of randomised controlled trials	253
Ethical issues and randomised controlled trials	265
Strengths and limitations of randomised controlled trials	268
Conclusion	271
Further reading	271
Questions	272
References	274
<b>Part 5 Evaluating: Is there a relationship between exposure and the outcome?</b>	<b>279</b>
<b>10 Detecting a relationship: Is this relationship the real deal?</b>	<b>280</b>
Introduction	281
Measuring relationships and their effect	281

What else might be affecting this relationship?	291
How meaningful is this relationship?	299
Conclusion	307
Further reading	308
Questions	308
References	311

**Part 6 Decision-making: Could the relationship be true?** **315**

<b>11 Considering the effect of bias and confounding: Can good studies go bad, or are they just in with the wrong crowd?</b>	<b>316</b>
Introduction	317
Validity and its assessment	317
Bias in epidemiological studies	322
Confounding	334
Conclusion	341
Further reading	342
Questions	342
References	345
<b>12 Bringing it together: So what?</b>	<b>348</b>
Introduction	349
The scientific literature	349
Evaluating research methods	360
Synthesising the evidence	368
Conclusion	373
Further reading	373
Questions	374
References	377
