<i>Preface to the Second Edition</i>	<i>page</i> xiii
<i>Preface to the First Edition, 2000</i>	xv
<i>Acknowledgments</i>	xvii
PART I Basic Phenomenology	
1 Scales	3
Notes	7
2 Observational Windows	9
2.1 Radio	11
2.2 Millimetric	12
2.3 Infrared	12
2.4 Optical	13
2.5 Ultraviolet	14
2.6 X-Rays	15
2.7 Other Sources	16
Notes	16
3 Classifications	19
3.1 Hubble Classification	20
3.2 Morphology of Elliptical Galaxies	21
3.3 Morphology of Spiral Galaxies	22
Notes	25
4 Photometry, Kinematics, and Dark Matter	29
4.1 Luminosity Profiles	30
4.1.1 Exponential Disks	30
4.1.2 The $R^{1/4}$ Law	32
4.1.3 Azimuthal Structure	33
4.2 Doppler Line Shifts and Linewidths	34
4.2.1 Rotation Curves of Spiral Galaxies	34
4.2.2 Kinematic Profiles of Elliptical Galaxies	37
4.3 Global Scaling Laws	39
4.3.1 Luminosity-Velocity Relation for Spiral Galaxies	40
4.3.2 The Rising Part of the Rotation Curves of Spiral Galaxies	40
4.3.3 The Fundamental Plane of Elliptical Galaxies	42
4.3.4 The Mass of the Central Black Hole – Velocity Dispersion Relation for Spheroids	44
4.4 Dark Matter and Cosmology	44
Notes	47

5	Basic Questions, Semiempirical Approach, and the Dynamical Window	53
5.1	Structure	54
5.1.1	Morphology and Pattern Formation in Complex Systems	55
5.2	Formation and Evolution	56
5.2.1	The Cosmological Context	57
5.3	Modeling and Some Fundamental Questions	58
5.4	Relation to Other Branches of Astrophysics	58
PART II Physical Models		
6	Self-Gravity and Relation to Plasma Physics	61
6.1	Gravity and Self-Gravity	63
6.2	Collective Behavior	63
6.3	A Concise Dictionary	64
	Notes	65
7	Relaxation Times, Absence of Thermodynamical Equilibrium	66
7.1	Two-Star Relaxation Times	66
7.1.1	Heuristic Analysis	66
7.1.2	Full Expressions for the Relaxation Times	67
7.1.3	Setting the Parameter Dependence	69
7.1.4	Relation to Other Time Scales	69
7.2	Collisionality and Dynamical Friction in Inhomogeneous Systems	70
7.2.1	Adequacy of the Classical Local Description	70
7.2.2	Slow, Nonadiabatic Evolution of Elliptical Galaxies Induced by Dynamical Friction	71
7.2.3	Other Astrophysical Effects Related to Collisionality	74
7.2.4	Relaxation Processes in Globular Clusters	74
7.3	Collisionless Relaxation Processes	76
7.3.1	Phase Mixing	76
7.3.2	Resonances and Collective Modes	76
7.3.3	Violent Relaxation	77
	Notes	78
8	Models	82
8.1	Systems of Many Particles	82
8.2	Continuum Limit and Stellar Dynamics	84
8.3	Fluid Limit and Fluid Models	85
8.3.1	An Example of Moment Equations	87
8.3.2	Equations for a Zero-Thickness Barotropic Fluid Disk	87
8.4	Virial Equations	88
8.5	Asymptotics versus Toy Models	89
8.5.1	Matched Asymptotic Expansions	91
	Notes	92
9	Equilibrium and Stability: Symmetry and Symmetry Breaking	95
9.1	The Jeans Theorem	96
9.1.1	A Self-Consistent Collisionless Plasma Configuration with a Current Sheet	97
9.2	Symmetry Breaking	99
9.2.1	An Elementary Example from Classical Mechanics	99
9.2.2	Classification of Modes	101

<i>Contents</i>	vii
9.3 Motivation for Perturbation Analyses	102
9.4 Spiral Galaxies versus Elliptical Galaxies	103
Notes	104
10 Classical Ellipsoids	105
10.1 Ellipsoidal Figures of Equilibrium	106
10.1.1 Some Properties of Homogeneous Ellipsoids	106
10.1.2 Classification of the Equilibrium Configurations	108
10.2 Rigidly Rotating Equilibrium Ellipsoids	110
10.2.1 Axisymmetrical Maclaurin Spheroids	111
10.2.2 Triaxial Jacobi Ellipsoids	111
10.2.3 Extremizing the Mechanical Energy	112
10.2.4 Tensor Virial Equations	112
10.3 The Mechanism of Bifurcation	113
10.3.1 Linear Modal Analysis	113
10.3.2 Dynamical and Secular Stability	115
10.3.3 Thermodynamical Analogue of Phase Transitions	115
Notes	116
11 Introduction to Dispersive Waves	119
11.1 Hyperbolic Waves	120
11.2 Dispersive Waves	122
11.2.1 Fourier Analysis	122
11.2.2 Modulation Theory	124
11.2.3 Dynamics of Ray Tracing in Inhomogeneous Media	125
11.3 Water Waves	126
11.3.1 Derivation of the Dispersion Relation	126
11.3.2 Regimes	127
11.3.3 Examples	128
Notes	129
12 Jeans Instability	131
12.1 Homogeneous Fluid Model	131
12.1.1 Inhomogeneous Systems and Relation to the Virial Theorem	132
12.1.2 Electrostatic Plasma Waves	133
12.1.3 Simple Generalizations	133
12.2 Homogeneous Kinetic Model and Landau Damping	134
12.2.1 Plasma Dispersion Function	135
12.2.2 Marginal Stability and the Fluid Limit	136
12.3 Kinetic Analysis of a Plane-Parallel Slab	137
12.3.1 Bounce Orbit Expansion	138
Notes	138
PART III Spiral Galaxies	
13 Orbits	143
13.1 Action and Angle Variables	145
13.2 Epicyclic Orbits	146
13.3 Rotating Frame	149
13.4 Trapping at the Lagrangian Points	149
13.4.1 Trapping of a Charged Particle on the Top of a Hill	152
13.5 Equations for the Guiding Centers	153

13.5.1	Larmor Oscillations and Drifts	153
13.5.2	Star Drifts and Stellar Hydrodynamics	155
13.6	Exact Orbits and the Problem of Self-Consistency	157
13.6.1	Three-Dimensional Orbits and Polar-Ring Galaxies	157
13.6.2	Exact Orbits in Nonaxisymmetrical Disks	158
13.6.3	Orbital Response and Self-Consistency	159
	Notes	160
14	The Basic State: Vertical and Horizontal Equilibrium of the Disk	162
14.1	Vertical Equilibrium	163
14.1.1	The Isothermal Self-Gravitating Slab	163
14.1.2	The Inhomogeneous Disk and Study of the Solar Neighborhood	164
14.2	Quasi-Maxwellian Distribution Function for a Cool Disk	168
14.3	Exact Models	169
14.3.1	Density-Potential Pairs	169
14.3.2	Distribution Function for the Isothermal Self-Similar Disk	171
14.4	A Reference Basic State in View of the Problem of Spiral Structure	172
14.5	A Reference Basic State in View of the Problem of Dark Matter	175
14.6	The Problem of Extraplanar Gas	177
	Notes	180
15	Density Waves	184
15.1	Dispersion Relations	187
15.1.1	Dispersion Relation for Tightly Wound Waves in a Disk of Stars	187
15.1.2	The Quadratic Dispersion Relation for a Fluid One-Component Model	190
15.1.3	The Cubic Dispersion Relation for the Fluid Model	190
15.1.4	Finite-Thickness Effects	191
15.2	Marginal Stability	191
15.2.1	For the Quadratic Dispersion Relation of the Fluid Model	192
15.2.2	For the Quadratic Dispersion Relation of the Fluid Model with Finite Thickness	192
15.2.3	For the Quadratic Dispersion Relation of a Fluid Fully Self-Gravitating Disk with Finite Thickness	193
15.2.4	For the Zero-Thickness Case in Stellar Dynamics	193
15.2.5	For the Cubic Dispersion Relation of the Fluid Model	194
15.3	Wave Branches	195
15.3.1	Group Propagation and Wave Action	197
15.3.2	Propagation Diagrams	198
15.4	Turning Points and Resonances	199
15.5	Dynamical Mechanisms	200
15.5.1	Parameter Regimes	200
15.5.2	Feedback and Maintenance	202
15.5.3	Overreflection and Excitation	203
15.5.4	Wave Cycles for Self-Excited Modes	204
15.6	Equations of the Homogeneous Shearing Sheet	205
	Notes	206
16	Roles of Gas	210
16.1	Waves and Effective Stability in a Two-Component Disk	211
16.1.1	Two-Fluid, Zero-Thickness Dispersion Relation	211

<i>Contents</i>	ix
16.1.2 Marginal Stability and Decoupling	212
16.2 Modeling Process for a Disk of Stars and Gas	215
16.3 Self-Regulation for a Disk of Stars and Gas	218
16.4 Different Behaviors of Gas and Stars at Resonances	219
16.4.1 Lindblad Resonances	219
16.4.2 Corotation Resonance	222
16.5 Role of Near-Infrared Observations	223
Notes	226
17 Global Spiral Modes	229
17.1 Exact Equations for Linear Density Perturbations in a Fluid Disk Model	231
17.2 Reduction to an Ordinary Differential Equation for Tightly Wound Perturbations	232
17.2.1 Poisson Equation for Tightly Wound Perturbations	232
17.2.2 A Single Ordinary Differential Equation	233
17.2.3 The Quadratic Dispersion Relation Recovered	234
17.3 A Two-Turning-Point Problem	234
17.3.1 Boundary Conditions and the Eigenvalue Problem	235
17.3.2 Two Turning Points	235
17.3.3 Langer's Transformation	235
17.4 Quantum Condition and Discrete Spectrum of Spiral Modes	237
17.5 From Linear Modes to Spiral Structures in Galaxies	240
17.5.1 Morphology and Other Properties of Modes	240
17.5.2 Modeling and the Dynamical Window	242
17.5.3 Global Modes and Evolution	243
17.5.4 A Synopsis of Alternative Scenarios	244
Notes	245
18 Spiral Structure in Galaxies	247
18.1 Quasi-Stationary Spiral Structure and Three Levels of Persistence	248
18.1.1 Spiral Structure in N -Body Simulations	250
18.1.2 Investigations into the Large-Scale Shock Scenario	252
18.2 Dynamical Classification of Spiral Morphologies	253
18.2.1 Locating the Corotation Circle	256
18.3 Interpreting Specific Observed Features	257
18.3.1 Prominent Spiral Arms in the Gaseous Outer Disk	259
18.4 Evolution	261
Notes	261
19 Bending Waves	266
19.1 Bending Waves in a Simple Slab Model	269
19.2 Disk-Halo Interaction and Related Two-Stream Instability	270
19.3 Inhomogeneous Disks and the Zero-Thickness Limit	272
19.4 Bending Waves on a Current Sheet and the Solar Sectors	273
Notes	276
20 Dark Matter in Spiral Galaxies	280
20.1 Rotation Curves of External Galaxies and Their Decomposition	282
20.1.1 The Maximum-Disk Decomposition	286
20.1.2 Conspiracy	286
20.1.3 Degeneracy	287
20.2 Dynamical Arguments	288

20.3	Dark Matter in Our Galaxy	289
20.4	Cosmological Arguments	290
20.4.1	Central Cusps	290
20.4.2	Substructures	291
20.5	Modified Newtonian Dynamics?	291
	Notes	294
PART IV Elliptical Galaxies		
21	Orbits	299
21.1	Spherical Potentials	301
21.1.1	Keplerian Potential	302
21.1.2	Harmonic Potential	302
21.1.3	Logarithmic Potential	302
21.1.4	Isochrone Potential	303
21.1.5	The Perfect Sphere	304
21.2	Classification of Potentials in Relation to the Jeans Theorem	304
21.2.1	The Concept of Isolating Integral Exemplified by the Two-Dimensional Anisotropic Harmonic Oscillator	304
21.2.2	Local Integrals, Exceptional Integrals, and Quasi-Integrals	305
21.3	Nonspherical Potentials with Isolating Integrals	306
21.3.1	Triaxial Case	306
21.3.2	Axisymmetric Case	307
21.3.3	Asymptotic Behavior at Large Radii	309
21.3.4	The Perfect Ellipsoid	310
21.4	More General Potentials	310
	Notes	311
22	Stellar Dynamical Models	313
22.1	Four Approaches	315
22.1.1	Search for Interesting Exact Models	315
22.1.2	Density-Priority Models	316
22.1.3	Deprojecting the Data	317
22.1.4	Distribution-Function Priority Models	318
22.2	Local Description of Relaxed Systems	319
22.2.1	The Isothermal Sphere	319
22.2.2	Galaxy Cores and Anisotropic Models Obtained by Means of Adiabatic Growth	321
22.3	Global Description of Quasi-Relaxed Stellar Systems	325
22.3.1	Spherical Isotropic (King) Models	326
22.3.2	Triaxial Isotropic Models Supported by Stationary Tides	332
22.3.3	Rigidly Rotating Axisymmetric Models	334
22.3.4	Differentially Rotating Axisymmetric Models with Pressure Anisotropy	335
22.4	Global Description of Partially Relaxed Stellar Systems	337
22.4.1	Physical Basis	337
22.4.2	Selection Criterion and Identification of the Distribution Function	339
22.4.3	Properties of the Self-Consistent Nontruncated Models	341
22.4.4	Density Behavior Associated with the $R^{1/4}$ Law	345
22.4.5	Self-Consistent Truncated Models	346
22.4.6	Two-Component Models (with Dark Matter)	347
	Notes	349

23	Stability	355
23.1	Basic Equations for Linear Modes	356
23.1.1	Linearized Equations	356
23.1.2	Generalized Spherical Harmonics	357
23.1.3	Diagonalization	358
23.1.4	Bounce Average and Resonance Conditions	359
23.1.5	Conditions at Large Radii	360
23.1.6	Subsidiary Eigenvalue Problem and Choice of a Set of Basis Functions	360
23.1.7	Global Dispersion Relation	361
23.2	Radial-Orbit Instability	362
23.2.1	A Conjectured Criterion for Instability	362
23.2.2	Constraints on the Intrinsic Structure of Elliptical Galaxies	364
23.2.3	Some Theoretical Issues	366
23.3	Stability of Rotating Stellar Systems	367
	Notes	367
24	Dark Matter in Elliptical Galaxies	370
24.1	Stellar Dynamical Diagnostics	371
24.2	Other Kinematic Tracers	374
24.2.1	Hot Interstellar Gas	374
24.2.2	Cold Atomic Hydrogen	377
24.2.3	Planetary Nebulae and Other Discrete Tracers	379
24.2.4	Warm Ionized Gas	380
24.3	Globular Clusters versus Dwarf Spheroidal Galaxies	380
24.4	Early-Type Galaxies at Cosmological Distances	380
24.5	Dark Matter in Groups and Clusters	381
	Notes	385
PART V In Perspective		
25	Selected Aspects of Formation and Evolution	391
25.1	Gravothermal Catastrophe	392
25.2	Collisionless Collapse	394
25.2.1	Analogous Themes in Hydrodynamics and Magnetohydrodynamics	396
25.2.2	Statistical Mechanics of Partially Relaxed Stellar Systems	396
25.2.3	Some Interesting Properties of the f_∞ and $f^{(v)}$ Models	398
25.2.4	Degeneracy?	402
25.3	Dissipative Collapse	402
25.3.1	Cooling Flows	403
25.4	Global Characteristics of Galaxies and Their Evolution	408
25.4.1	A Mass-Luminosity Relation for Galaxies?	408
25.4.2	Weak Homology of Elliptical Galaxies	409
25.4.3	The Universe at Large Redshifts	411
	Notes	414
26	Galaxies and Gravitational Lensing	418
26.1	Elements of Gravitational Lensing	419
26.1.1	Einstein Rings, Multiple Images, Time Delays	421
26.1.2	Extended Sources	423
26.2	Kinds of Gravitational Lensing	424

26.2.1	Microlensing	424
26.2.2	Strong Lensing	424
26.2.3	Weak or Statistical Lensing	425
26.3	Some Interesting Applications	427
26.3.1	Combined Use of Stellar Dynamics and Gravitational Lensing	427
26.3.2	Galaxy-Galaxy Lensing	427
26.3.3	Measurement of the Cosmological Parameters and the Cosmic Shear	429
26.3.4	A Direct Measurement of Magnification Based on Observation of the Fundamental Plane	429
26.3.5	Double Lenses	431
	Notes	432
27	Self-Gravitating Accretion Disks	435
27.1	The Traditional Paradigm of Accretion Disks	436
27.1.1	Viscous Diffusion	436
27.1.2	Luminosity by Viscous Dissipation for a Steady-State Accretion Disk	437
27.1.3	A Useful Semiempirical Framework: The α -Disks	438
27.1.4	Energy Budget: Different Types of Accretion Disks	438
27.2	Steady-State Self-Gravitating Accretion Disks	439
27.2.1	Thickness	439
27.2.2	Momentum and Energy Transport by Density Waves: Self-Regulation	439
27.2.3	Rotation Curves	440
27.2.4	Self-Regulated Accretion Disks	440
27.3	Some Applications	442
27.3.1	Spectral Energy Distribution of Protostellar Disks	442
27.3.2	Non-Keplerian Rotation	445
27.3.3	HI Disks	447
	Notes	447
	<i>Bibliography</i>	451
	<i>Index of objects</i>	455
	<i>Index</i>	457
