<i>Preface</i>	<i>page</i> ix
Part I Potential Theory	1
1 The Gravitational Field	3
1.1 The Gravitational Field of a Point Mass and of Extended Distributions	3
1.2 Newton's First and Second Theorems	5
1.3 The Gauss Theorem and the Gravitational Field	7
Exercises	10
2 The Gravitational Potential	14
2.1 The Gravitational Potential	14
2.2 Newton's Third Theorem	19
2.3 Multipole Expansion	28
2.4 The Green Function for the Poisson Equation	30
Exercises	36
3 Tidal Fields	49
3.1 The Tidal Potential and the Tidal Field	49
3.2 Rigid Bodies in Tidal Fields	53
3.3 Stellar Orbits in Tidal Fields	63
Exercises	65
4 The Two-Body Problem	70
4.1 Center of Mass and the Reduced Mass	70
4.2 The Slingshot Effect	73
4.3 The Laplace–Runge–Lenz Vector	78
Exercises	80
5 Quasi-Circular Orbits	83
5.1 Orbits in Axisymmetric Potentials	83

vi	<i>Contents</i>	
	5.2 Second-Order Epicyclic Approximation	86
	5.3 Oort's Constants	90
	Exercises	94
	Part II Systems of Particles	103
6	The N -Body Problem and the Virial Theorem	105
	6.1 The N -Body Problem and the Lagrange–Jacobi Identity	105
	6.2 The Scalar Virial Theorem	111
	Exercises	119
7	Relaxation 1: Two-Body Relaxation	124
	7.1 The Granular Nature of Stellar Systems	124
	7.2 The Impulsive Approximation	126
	7.3 Relaxation Time for Self-Gravitating Systems	132
	Exercises	134
8	Relaxation 2: Dynamical Friction	137
	8.1 The Chandrasekhar Formula	137
	8.2 Dynamical Friction in the Presence of a Mass Spectrum	139
	8.3 Astrophysical Applications and Final Comments	145
	Exercises	146
	Part III Collisionless Systems	149
9	The Collisionless Boltzmann Equation and the Jeans Theorem	151
	9.1 The Liouville Equation	151
	9.2 The Collisionless Boltzmann Equation	155
	9.3 Integrability and the Jeans Theorem	161
	Exercises	167
10	The Jeans Equations and the Tensor Virial Theorem	172
	10.1 The Method of Moments	172
	10.2 The Jeans Equations	174
	10.3 Analogies with and Differences from Fluid Dynamics	176
	10.4 Stellar Dynamics and Gas Dynamics in Stellar Systems	179
	10.5 The Tensor Virial Theorem	185
	Exercises	189
11	Projected Dynamics	197
	11.1 The Projection Operator	197
	11.2 Projected Velocity Moments	200
	11.3 Velocity and Line Profiles	203
	11.4 The Projected Virial Theorem	205
	Exercises	208

<i>Contents</i>		vii
12	Modeling Techniques 1: Phase-Space Approach	211
12.1	The Construction of a Galaxy Model: From f to ρ	211
12.2	Spherical Systems	214
12.3	Two-Integral Axisymmetric Systems	227
	Exercises	232
13	Modeling Techniques 2: Moments Approach	236
13.1	The Construction of a Galaxy Model: Starting with the Jeans Equations	236
13.2	The Choice of the Density Distribution	237
13.3	The Solution of the Jeans Equations	255
13.4	The Fundamental Plane of Elliptical Galaxies and the Virial Theorem	266
	Exercises	269
14	Modeling Techniques 3: From ρ to f	281
14.1	Recovering the DF	281
14.2	Axisymmetric and Triaxial Models	285
14.3	Testing the Consistency	286
14.4	The GDSAI	290
	Exercises	294
<i>Appendix</i>	Mathematical Background	296
A.1	Identities of Vector Calculus	296
A.2	Special Functions	304
A.3	Fourier Transforms and Series	313
A.4	The Gauss and Stokes Theorems	314
A.5	Green Identities	319
A.6	The Helmholtz Decomposition Theorem	319
A.7	Green Functions	320
A.8	Differential Operators in Orthogonal Curvilinear Coordinates	322
A.9	The “Co-Area” Theorem	326
A.10	Transport Theorems	328
	<i>References</i>	333
	<i>Index</i>	344
