 CONTENTS

Preface *page* xiii

Introduction		1
0.1	Infinite sets and the continuum	1
0.2	An analytic model of the straight line	2
0.3	The rise and fall of infinitesimals	4
0.4	The return of infinitesimals	5
0.5	Ultrafilters and ultrapowers	7
0.6	What is internal set theory?	8
0.7	Internal, external, and standard sets	10

PART I ELEMENTS OF REAL ANALYSIS

1	Internal set theory	17
1.1	The basic language of IST	18
1.2	Exercises	20
1.3	Classes	21
1.4	Basic concepts and axioms of IST	24
1.5	Exercises	27
1.6	Relations and functions	28
1.7	Exercises	31
1.8	The replacement axiom	32
1.9	The regularity and infinity axioms	33
1.10	The transfer axiom	35
1.11	Exercises	38
2	The real number system	40
2.1	Ordered field properties of \mathbb{R}	41

Cambridge University Press

Table of Contents

[More information](#)

viii	Contents	
2.2	Integers, rationals, and irrationals	44
2.3	Exercises	53
2.4	The supremum principle	54
2.5	Exercises	59
2.6	Ordering properties of the integers	60
2.7	Exercises	62
2.8	Absolute value and intervals	63
2.9	Exercises	66
2.10	Finite and infinite sets	66
2.11	Exercises	70
2.12	Idealization axiom	71
2.13	Nonstandard numbers	71
2.14	Exercises	77
2.15	Standardization axiom	78
2.16	Exercises	83
2.17	Standard finite sets	83
2.18	Exercises	87
3	Sequences and series	88
3.1	Convergence of sequences	88
3.2	Exercises	95
3.3	Monotone sequences	97
3.4	Exercises	101
3.5	Subsequences	102
3.6	Exercises	105
3.7	Cauchy convergence criterion	106
3.8	Exercises	107
3.9	Infinite series	109
3.10	Exercises	120
3.11	Power and logarithmic functions	122
3.12	More on the exponential function	129
3.13	Exercises	132
4	The topology of \mathbb{R}	134
4.1	Open and closed sets	134
4.2	Exercises	140
4.3	The Heine–Borel theorem	141
4.4	Exercises	145
5	Limits and continuity	146
5.1	Limit of a function at a point	147
5.2	Exercises	154

Cambridge University Press

Table of Contents

[More information](#)

	Contents	ix
5.3	One-sided limits and infinite limits	156
5.4	Exercises	160
5.5	Continuous functions	161
5.6	Exercises	165
5.7	Properties of continuous functions	166
5.8	Exercises	169
5.9	Uniform continuity	170
5.10	Exercises	174
5.11	Monotone functions	176
5.12	Oscillation of a function	182
5.13	Exercises	185
6	Differentiation	187
6.1	Definitions and basic properties	187
6.2	Exercises	196
6.3	Differentiability and local properties	199
6.4	Exercises	202
6.5	The mean value theorem	203
6.6	Exercises	206
6.7	L'Hospital's rule	208
6.8	Exercises	212
6.9	Higher-order derivatives	213
6.10	Taylor polynomials	215
6.11	Exercises	219
6.12	Convex functions	220
6.13	Exercises	226
6.14	Darboux's theorem	226
6.15	Exercises	229
7	Integration	231
7.1	Definition of the Riemann integral	233
7.2	Basic properties of the Riemann integral	241
7.3	Exercises	244
7.4	The Lebesgue–Riemann theorem	245
7.5	Exercises	255
7.6	The fundamental theorem of calculus	257
7.7	Exercises	262
7.8	Improper Riemann integration	263
7.9	Exercises	268
8	Sequences and series of functions	270
8.1	Pointwise and uniform convergence	271
8.2	Exercises	278

Table of Contents

[More information](#)

x	Contents	
8.3	Applications of uniform convergence	280
8.4	Exercises	291
9	Infinite series	293
9.1	Upper and lower limits of sequences	294
9.2	Exercises	300
9.3	Absolute and conditional convergence	302
9.4	Exercises	314
9.5	Power series	315
9.6	Functions defined by power series	318
9.7	Exercises	328
PART II ELEMENTS OF ABSTRACT ANALYSIS		
10	Point set topology	333
10.1	Topological spaces	334
10.2	Monads in topological spaces	341
10.3	Exercises	352
10.4	Continuous functions	354
10.5	Exercises	360
10.6	Compactness	361
10.7	Local compactness	367
10.8	Connectedness	371
10.9	Monads of filters	373
10.10	Exercises	376
11	Metric spaces	379
11.1	The metric topology	379
11.2	Normed vector spaces	383
11.3	Metric space properties of \mathbb{R}^n	385
11.4	Exercises	395
11.5	Standard hulls of classes and functions	396
11.6	Exercises	400
11.7	The Peano existence theorem	401
12	Complete metric spaces	404
12.1	Completeness	404
12.2	Total boundedness	409
12.3	Compactness in metric spaces	414
12.4	Uniform and Lipschitz continuity	416
12.5	Products of metric spaces	420
12.6	The completion of a metric space	424
12.7	Exercises	430

Table of Contents

[More information](#)

Contents	xi
13 Some applications of completeness	433
13.1 Baire category theorem	433
13.2 Two extension theorems	438
13.3 Banach fixed point theorem	440
14 Linear operators	443
14.1 The p -norm of a linear operator	443
14.2 The operator norm	453
14.3 Invertible operators	455
14.4 Integral operators	456
14.5 Exercises	459
15 Differential calculus on \mathbb{R}^n	461
15.1 First-order differentials	461
15.2 Directional and partial derivatives	468
15.3 Exercises	475
15.4 Higher-order differentials	477
15.5 Inverse and implicit function theorems	489
15.6 Exercises	501
16 Function space topologies	503
16.1 The \mathcal{K} -convergence topology	503
16.2 Metrization of \mathcal{K} -convergence topology	506
16.3 The \mathcal{K} -open topology	507
16.4 The Ascoli theorem	510
16.5 The Stone–Weierstrass theorem	514
16.6 Exercises	518
Appendix A Vector spaces	521
Appendix B The b-adic representation of numbers	523
B.1 b -adic representation of integers	524
B.2 b -adic representation of real numbers	527
B.3 Exercises	531
B.4 Some examples of proofs by induction	532
B.5 Existence of roots	534
Appendix C Finite, denumerable, and uncountable sets	536
C.1 Finite sets	536
C.2 Exercises	538
C.3 Denumerable sets	538
C.4 Uncountable sets	542
C.5 Exercises	543
