
Contents

	<i>Preface</i>	<i>page</i> ix
1	Binomial pricer	1
	1.1 Program shell	2
	1.2 Entering data	4
	1.3 Functions	7
	1.4 Separate compilation	10
	1.5 CRR pricer	13
	1.6 Pointers	18
	1.7 Function pointers	21
	1.8 Taking stock	26
2	Binomial pricer revisited	28
	2.1 Our first class	28
	2.2 Inheritance	36
	2.3 Virtual functions	43
	2.4 Summing up	49
3	American options	53
	3.1 Multiple inheritance	54
	3.2 Virtual inheritance	59
	3.3 Class templates	64
4	Non-linear solvers	75
	4.1 Implied volatility	75
	4.2 Bisection method	76
	4.3 Newton–Raphson method	77
	4.4 Function pointers	77
	4.5 Virtual functions	80
	4.6 Function templates	83
	4.7 Computing implied volatility	87
	4.8 Remarks on templates	91
5	Monte Carlo methods	93
	5.1 Path-dependent options	93
	5.2 Valuation	95
	5.3 Pricing error	100
	5.4 Greek parameters	103

Cambridge University Press

978-1-107-00371-2 - Numerical Methods in Finance with C++

Maciej J. Capiński and Tomasz Zastawniak

Table of Contents

[More information](#)

viii	<i>Contents</i>	
	5.5 Variance reduction	106
	5.6 Path-dependent basket options	114
6	Finite difference methods	125
	6.1 Parabolic partial differential equations	125
	6.2 Explicit method	132
	6.3 Implicit schemes	140
	6.4 Changing coordinates	149
	6.5 American options	154
	6.6 Proofs	162
	<i>Index</i>	165
