 - 4D debt deflation, 103–110
 - debt financing, 91
 - for a degree of wage flexibility, 61
 - 34 dimensional dynamical system, 192–197
 - Dornbusch exchange rate dynamics mechanism, 244
 - for excessive consumption, 78
 - full credit rationing and repelling steady state, 66–67
 - instability for small values of loan rate, 63–65
 - Jacobian determinant for credit rationing, 66
 - Jacobian determinant for excessive consumption, 59–61
 - Jacobian determinant for weak excessive consumption, 62
 - Keynesian IS-curve, 58
 - NAIRU rate of employment, 198
 - for a 'normal' range of parameter values, 61–62
 - process of debt deflation, 66
 - reference balanced growth, 61
 - Routh-Hurwitz condition for local asymptotic stability, 61
 - for small values of i and flexible wage adjustment, 69–71
 - static relationships, 200–201
 - target rate of profit, 57
 - transition from crisis to "pre-crisis" level, 82
 - weakly excessive consumption case, 62–65, 78–82, 84
- subprime crisis, 5–8, 51
 - asset pricing theories, 7
 - evolution of, 6
 - and Greenspan low interest rate policy, 6–7
 - portfolio approach argument, 7
- Taylor interest rate policy rule, 124, 129
- uncovered interest rate parity (UIP), 173
- US the financial market crisis of 2007/2008, 6, 86
- Walras' Law of Stocks, 19, 23, 44
- weak excessive consumption case
 - case of weak wage adjustment, 78
 - goods market equilibrium expression, 62
 - Jacobian determinant, 62, 63
 - and monetary policy, 84
 - sector of worker households, 63
 - for small values of loan rate, 63–65
- worker households
 - consumption demand of, 76
 - and credit rationing of commercial banking, 71
 - worker's real debt and debt default, 53
- Zero-root hysteresis, 94
